PROCEEDINGS OF THE
1990 ACM SIGSMALL/PC
SYMPOSIUM ON SMALL SYSTEMS

edited by

HAL BERGHEL
ELIZABETH UNGER
RICHARD RANKIN

sponsored by the ACM Special Interest Group
on Personal and Small Computers
# TABLE OF CONTENTS

## Expert Systems - 1

- The Physiology of a PROLOG Expert System Inference Engine ........................................... 1
  David Roach, Hal Berghel  
  *University of Arkansas*

- Grouper: An Expert System for Redistricting ................................................................. 6
  Stephen P. Leach, Abraham Kandel  
  *Florida State University*

- Fault Finder ......................................................................................................................... 13  
  W. Elliott, *HARRIS Air Traffic Control Systems Division*  
  Mordechay Schneider, *Florida Institute of Technology*

## Networking

- Specification and Verification of Active Message Systems .................................................. 24  
  K.W. Wong, E.A. Unger  
  *Kansas State University*

- Dynamic Data as Deterrent to the Tracker ........................................................................... 31  
  Miguel Cabrera, Elizabeth A. Unger  
  *Kansas State University*

## Object-Oriented Programming

- ASK: A Kernel for Programming Actor Systems ............................................................... 36  
  Michele Di Santo, Giulio Iannello  
  *Universita di Salerno*

- An Object/Message Model for the Development of Integrated Workstation Software ...... 43  
  Kathleen Taylor, Michael A. Bauer  
  *University of Western Ontario*

- View-Based Tool Integration in Database - Centered Environments ................................ 53  
  V. Venugopal, *Ohio State University*  
  (Winner, George W. Gorsline Student Paper Competition)

## Human-Machine Interfaces

- Adapting Software to the User’s Cognitive Style: Field Dependence - Field Independence ................................................................. 61  
  David W. Valentine, *Potsdam College of the State of New York*

- Dynamically Displaying a Pascal Program in Color ....................................................... 68  
  John F. Cigas, *Ithaca College*
Basic Requirements and Main Features of a System Supporting the Reusability of Mathematical Software on Personal Computers ........................................ 72  
Paolino Di Felice, Universita Di L'Aquila

Semantic Assistance Nets ................................................................. 80  
William David Miller, Oklahoma State University

Logic Programming

An Approach to Tableau Inferencing with "Hardwired" Heuristics ................ 90  
Hal Berghel, Richard Rankin, Farrukh Burney  
University of Arkansas

Real-Time Reasoning with PROLOG .................................................. 94  
Chunsik Yi, Steven Graham  
University of Missouri-Kansas City

STP: A Simple Theorem Prover for IBM-PC Compatible Computers ............... 98  
Blayne Mayfield, Oklahoma State University  
Timothy Baird, Harding University

Using Object-Orientation to Implement Logic Programming ..................... 106  
Phillip Cox, Technical University of Nova Scotia

Computer Science Education

A Personal Computer Based Expert System for Answering Student Questions in the CS1 Course ................................................................. 115  
Robert L. Tureman, Jr., Paul D. Camp Community College

The Cost-Effective Integration of Microcomputers into a Campus Computing Environment .......................................................... 118  
Mark Luker, University of Minnesota, Duluth

Teaching Digital Logic Design Using a Tape Recorder Simulator ................ 123  
R.P. Srivastava, Towson State University

A Small Operating System ............................................................... 132  
Dr. Jerry Sayers, East Tenn. State University

Artificial Intelligence

A Memory Adjustable Software System for Clustering and Retrieval .......... 139  
Taherah Daneshi, Cameron University

A Dynamic Memory Approach to Case Based Reasoning: AI Research on a Macintosh ................................................................. 143  
Barbara Cuthill, Mallory Selfridge  
University of Connecticut
Efficient Generation of Lexically Proper Palindromes .............................. 151
Richard Rankin, Hal Berghel, T. Xu
University of Arkansas

An Evaluation of Type-10 Homograph Discrimination at the Semi-Colon Level in Roget's International Thesaurus ................................. 156
John Talburt, Donna Mooney
University of Arkansas at Little Rock

Database

System Integration in Multidatabases ................................................. 160
P. Bodorik, Technical University of Nova Scotia
J.S. Riordon, Carleton University

Parametric Performance Evaluation of a Micro-Based Database System .......... 164
Ray Hashemi-Nassab, University of Arkansas at Little Rock

CLARE- A Prolog Database Machine .................................................. 172
Kam-Fai Wong, ECRC GmbH
M. Howard Williams, Heriot-Watt University

Performance Comparison of Extendible Hashing and Linear Hashing Techniques .... 178
Ashok Rathi, Huizhu Lu, G.E. Hedrick
Oklahoma State University

Architecture and Operating Systems

Implementation of a VLSI Layout Tool on Personal Computers .................... 186
A.G. Jost, P. Streatch, D.B. Guptill
Technical University of Nova Scotia

A Dedicated Small Computer for Artificial Intelligence ............................. 191
Hiromitsu Shirakawa, Hitoshi Ogawa, Masayuki Fujiwara
Ritsumeikan University

Evaluation of Queueing System Parameters Using Linear Algebraic Queueing Theory- An Implementation ............................................. 199
Lester Lipsky, Dilip Tagare, Edward Bigos
University of Connecticut

Performance Based Multiple Server Support for Distributed Real Time Applications ... 205
Tahaney A. Fergany, Howard A. Sholl,
University of Connecticut

Office Systems

A Formal Specification Tool for Office Systems ..................................... 215
Hossein Saiedian, University of Nebraska-Omaha
E.A. Unger, Kansas State University
Integration of Software Tools in Developing a Multiple Criteria Decision Support System on a Personal Computer .......................................................... 221
Angela Dixon, University of Tulsa
Ramesh Sharda, Oklahoma State University

The Role of Workstations in the Information Utility: A Model for User-Oriented Information Systems .............................................................. 228
Jacob Slonim, IBM Toronto Laboratories
Michael Bauer, University of Western Ontario

Expert Systems-2

DCA: An Expert System for Auditing Data Communications .................... 238
Patrick D. Fett, E.J. deNemours and Co.
K.M. George, Oklahoma State University

Fuzzy Belief Networks ...................................................................... 246
David F. Clark, Abraham Kandel
Florida State University

Explanation in Ecological Systems .................................................. 249
D. Riordan, Technical University of Nova Scotia
K.J. Carden, Rhodes University

Neural Networks

Self Organizing Neural Networks with a Split/Merge Algorithm ............... 255
A.D. Kulkarni, G. M. Whitson
University of Texas at Tyler

Using a Competitive Learning Neural Network to Evaluate Software Complexity .... 262
John Sheppard, William R. Simpson
ARINC Research Corp.

Using an Artificial Neural System to Determine the Knowledge Base of An Expert System .................................................. 268
George Whitson, Cathy Wu, Pam Taylor
University of Texas at Tyler

George W. Gorsline Student Papers

An Object-Oriented Data Model for Partition Processing in Distributed Databases ............................. 271
Rizwan Mithani, Kansas State University, (Honorable Mention)

Adequacy of Checksum Algorithms for Computer Virus Detection .................. 280
Doug Varney, Kansas State University, (Honorable Mention)

Implementation and Manipulation of Formal Objects: An Object-Oriented View ........ 283
Mauro Regio, Marco Temperini,
University of Rome "La Sapienza"

Knowledge-Based Understanding on a Small Machine .......................... 288
Benjamin Moreland, University of Connecticut
