Proceedings of the 3rd International Symposium on

SPACECRAFT FLIGHT DYNAMICS

Darmstadt, Germany
30 September – 4 October 1991

Organised by:
Orbit Attitude Division
ESA Computer Division
ESOC, Darmstadt

European Space Agency / Agence spatiale européenne
8-10, rue Mario-Nikis, 75738 PARIS CEDEX 15, France
Contents

FOREWORD

Session 1: GEOSTATIONARY CO-LOCATION
Chairmen: R. Münch, S. Pallaschke

Analysis of separation strategies for co-located satellites
L. Maisonobe & C. Dejole, CISI Toulouse, F

Approach to the evaluation of interferences between co-located geostationary spacecraft
A. Härtling, Satellite Operational Services, Gilching, D

An eccentricity control strategy for coordinated station keeping
S. Carlini, Telespazio, I, & F. Graziani, Universita La Sapienza, I

One year of co-location at ‘19 degrees’ west with TDF1 and TDF2 spacecraft
F. Dufor, CNES, F

Photographic observations of the co-located spacecraft spacecraft at 19 degrees west
H. Boehnhardt, mbp Software & Systems, Dortmund, D

Session 2: CELESTIAL MECHANICS
Chairmen: W. Flury, J. Fertig, K.F. Wakker

A quasiperiodic solution as a substitute of L_4 in the Earth-Moon system
G. Gómez, Universitat de Barcelona, Spain, &al

Precise analytical theory of an artificial satellite motion in the gravity field of a planet
E. Wnuk, Astr. Obs. of the A. Mickiewicz Univ., Poznań, Poland

Reducing the error growth in the numerical propagation of satellite orbits
J.M. Ferrándiz, J. Vigo & P. Martín, Univ. de Valladolid, Spain

Relegation of the proper rotation in attitude dynamics of a spacecraft
A. Elipe, M. Arribas & J. Palacián, Univ. de Zaragoza, Spain

Orbital perturbations due to the albedo effect
L. Sehnal, Astronomical Inst., Ondrejov, Czechoslovakia, &al

An efficient formulation for numerical orbit computation
A. Abad, M. Palacios & M. Sain-Echaluce, Univ. de Zaragoza, Spain
Session 3:  
ACCURACY AND PRECISE ESTIMATION  
Chairmen: J.P. Carrou, E.M. Soop

Some results of the ERS-1 radar altimeter calibration  
K.F. Wakker, R. Scharroo & B. Ambrosius, Delft Univ., NL  
Page 73

Calibrating the ERS-1 radar altimeter by using GPs in buoys  
G.W. Hein, H. Landau & H. Blomenhofer, IAPG, Univ. FAF Munich, D  
Page 81

Precise orbit determination with Dornis/Spot-2 system – first results  
F. Nouel & al, CNES, Toulouse, F  
Page 91

The on-ground attitude reconstitution of the Hipparcos satellite  
E. Canuto & F. Donati, Politecnico di Torino, I  
Page 97

Current activities and future plans for GPS applications  
J.M. Dow, ESA/ESOC, Darmstadt, D  
Page 105

Covariance transformations and global errors for orbit and attitude  
L. Fraiture, ESA/ESOC, Darmstadt, D  
Page 113

Session 4:  
ORBIT-RELATED EXPERIENCE  
Chairmen: J. Teles, T.A. Morley, V.N. Pochukaev

Navigation for a radar mapping satellite of Venus  
E.L. Akim, V.A. Stepan'yants & Z.P. Vlasova, USSR Acad. of Sciences, Moscow  
Page 127

COBE navigation with one-way return-link Doppler in the post-helium-venting phase  
J. Dunham, CSC, & al, USA  
Page 133

Orbit determination support for Hiten's aerobraking in the Earth's atmosphere  
L. Efron & al, JPL, USA  
Page 141

Testing, analysis and assessment of OD system software for the first Brazilian satellite  
H.K. Kuga & K.R. Rao, INPE, Brazil  
Page 149

Ulysses navigation  
H.J. Gordon, T.P. McElrath & P.R. Menon, JPL, USA  
Page 155

Evaluation of TDRSS-user orbit determination accuracy using batch least-squares and sequential methods  
D.H. Oza, CSC, & al, USA  
Page 163

Survey on Spot-system orbit-keeping exploitation  
P. Micheau, CNES, Toulouse, F  
Page 171

On-board low-Earth-orbit determination  
C. Jayles, CNES, & H. Renault, Aérospatiale, F  
Page 177

Review of ESOC re-entry prediction results for Salyut-7/Kosmos-1686  
H. Klinkrad, ESA/ESOC, Darmstadt, D  
Page 181
**Session 5**

**ATTITUDE-RELATED EXPERIENCE**

Chairmen: V.A. Sarychev, L. Fraiture, L. Merken

Galileo attitude determination: experiences with a rotating star scanner  
L. Merken & G. Singh, JPL, USA  

Hipparcos attitude determination with two gyros and a star mapper  
J.H.C. Auburn, Science Systems Ltd., &al, UK  

Olympus recovery: attitude aspects  
P. de Broeck, ESA/ESOC, Darmstadt, D  

Hubble Space Telescope pointing control system: designed for performance and mission operations  
A. Bradley, Allied Signal Aerospace Co., & J. Ryan, NASA, USA  

The in-flight calibration of the Hubble space telescope fine guidance sensors  
G. Welter, CSC, &al, USA  

Ulysses principal axis tilt determination and C-loading  
G. Gienger, ESA/ESOC, Darmstadt, D  

Attitude aspects of the Giotto extended mission  
M.J.H. Walker, Science Systems Ltd., UK  

ISO ground attitude determination during operations  
A.J. Batten, Science Systems Ltd., UK  

**Session 6:**

**GEOSTATIONARY MISSION ASPECTS**

Chairmen: E.M. Soop, J. Dow

Three-axis stabilisation in LEOP – autonomy or ground control?  
J.H.C. Auburn, Science Systems Ltd., UK  

Estimation of attitude thruster activity of spacecraft in Sun acquisition mode  
O. Montenbruck & E. Gill, DLR, D  

Operational strategies for liquid apogee propulsion system  
M. Hirota, NASA, &al, Japan  

Inmarsat-2 F1 and F2 launch and early operation phases assessment of the impact of contingency cases on attitude determination using in-flight data  
G. Taverner, CNES, Toulouse, F  

Italsat multiple apogee engine firings  
D. Hooken, Science Systems Ltd., GB  

Automation concepts for geosynchronous orbit control: a PEPSOC based automated, decision-making support tool  
J. Potti, GMV, S.A., Spain
Session 7: 
SPACECRAFT DYNAMICS AND CONTROL 
Chairmen: L. Fraiture, R. Münch

Dynamics of aerospace shuttles
Yu.G. Sikharulidze, A.V. Burov & V.S. Ladygin, USSR Acad. of Sciences, Moscow

Simulation results of coupling dynamics for spacecraft with panels of large size
Gao Huai bao, Center for Space Science & Applied Research, Academia Sinica, PR China

Magnetically stabilised satellite attitude motion and differential equations with slowly changing coefficients
M.L. Pivovarov, Space Research Institute, Moscow, USSR

Gravity orientation of large space stations
V.A. Sarychev & V.V. Sazonov, USSR Academy of Sciences, Moscow

Dynamics modelling for ERBS attitude propagation
E. Harvie & D. Chu, CSC, USA

On development of large spacecraft dynamics in China
Qu Guangji & al, Beijing Inst. of Space Engineering, CAST, China

Aerodynamic stabilisation system of a small scientific satellite
M.Yu Ovchinnikov, USSR Academy of Sciences, Moscow
V.I. Pen'kov, Moscow Aviation Institute

Session 8
MORE THAN ONE SPACECRAFT
Chairmen: J. Fertig, J. Dow, S. Pallaschke

New problems in space flight operations introduced by satellite mounted robots
R.W. Longman, Columbia Univ., NY, USA

Functional objectives of dynamics experiments in the TSS-1 mission
S. Bergamaschi & A. Catinaccio, Univ. of Padova, I

The research on hierarchical control in rendezvous and docking system
A.D. Sheng, H.Z. Hu & D. Wu, Harbin Inst. of Technology, PR China

The laser sensor for rendezvous and docking of spacecraft
Dai Yongjiang & al, Harbin Inst. of Technology, PR China

Photoelectric sensor with PSD
Zhao Yuan & al, Harbin Inst. of Technology, PR China

Tether assisted re-entry. Preliminary analysis for SEDS
S. Bergamaschi & F. Bonon, Univ. of Padova, I

Synchronous operation of MOS-1 and MOS-1b
T. Yoshikawa & al, NASA, Japan

Limitation of space debris in geostationary transfer orbit
R. Crowther, Royal Aircraft Establishment, Farnborough, UK
Session 9:
MISSION AND ORBIT DESIGN
Chairmen: J.S. Carter, J. Fertig, R. Münch

Soviet prospective space projects and the main branches of the fundamental and applied research in the field of astrodynamics and spacecraft navigation
V.N. Pochukaev & V.F. Tikhonov, Mission Control Center, Moscow, USSR

A feasibility study of low-cost missions to Mercury
M.M. Castronuovo, Univ. 'La Sapienza', I

Cluster: fuel optimum spacecraft formation control
J. Schoenmaekers, ESOC, Darmstadt, D

Rapid design of gravity assist trajectories
J. Carocio, CSC, &al, USA

Lunar swingby as a tool for halo-orbit optimisation in Rehct-2 project
N. Eismont, Space Research Institute, Russia, &al

Optimisation of double swingbys
A.A. Sukhanov, IKI, Moscow, Russia

A dynamical systems approach for the analysis of the Soho mission
G. Gómez, Univ. de Barcelona, Spain, &al

Session 10:
MISSION DESCRIPTIONS
Chairmen: R.W. Longman, R. Münch

Magellan mission planning and orbital operations
J.S. Carter & A.M. Tavormia, JPL USA

Mission operations of the spacecraft Hiten
K. Uesugi, ISAS, Japan, &al

On the 3-D configuration of the Cluster mission
M. Bello-Mora, GMV, Spain, & J. Rodríguez-Canabal, ESOC, Darmstadt, D

Navigation and guidance technique for SFU’s rendezvous with space shuttle
K. Ninomiya, ISAS, Japan, &al

The Giotto encounter with comet P/Grigg-Skjellerup
T.A. Morley, ESOC, Darmstadt, D

Special Session:
ERS-1 FLIGHT DYNAMICS OPERATIONS
Chairman: J. Dow

ERS-1 operational orbit determination and prediction
R.C.A. Zandbergen, J.M. Dow & S.D. Martin, ESOC, Darmstadt, D

ERS orbit control
M. Rosengren, ESA/ESOC, Darmstadt, D

Processing quick-look laser data from ERS-1
P. Duque, ESA/ESOC, Darmstadt, D &al

ERS-1 in-flight attitude performance verification
X. Marc, ESA/ESOC, & L. Massone, mbp Software & Systems, D

LIST OF PARTICIPANTS
