CONTENTS

DESIGN EVALUATION
A Concurrent Design Framework for the Ergonomics of Production Processes
Don R. Brown, Peter M. Budnick, and Donald S. Bloswick ........................................... 1
An Approach to Represent Imprecision in Interactive Design Using Fuzzy Set Theory
Numan Iqbal and Gary L. Kinzel ......................................................................................... 9
Incorporating End-Users’ Attitudes Towards Uncertainty Into an Expert System
Yun Qi Tian, Deborah L. Thurston, and James V. Carnahan ............................................ 19

FEATURE-BASED CONCURRENT ENGINEERING
Spatial Reasoning on Form Feature Interactions for Manufacturability Assessment
Yuh-Min Chen, R. Allen Miller, and Shao-Chiung Lu ....................................................... 29
Design Representation for Manufacturability Evaluation in CAD:
Beyond Feature-Based Design
Kos Ishii and R. Allen Miller ............................................................................................ 37
Features and Algorithms for Tooling Cost Evaluation in Injection Molding and Die Casting
David W. Rosen, John R. Dixon, Corrado Poli, and Xin Dong ........................................ 45
A Framework for Sheet Metal Part Design and Manufacturing Assessment
Tung-Ting Yu, Yuh-Min Chen, R. Allen Miller, Gary L. Kinzel, and
Taylan Altan ...................................................................................................................... 53

INTELLIGENT DESIGN ENVIRONMENT
A Potential Framework for CAD/CAE/CIM Decisions
Bruce W. Main and Allen C. Ward ..................................................................................... 61
Development of a Design Tool Incorporating Neural Networks
S. J. Mistry and S. S. Nair ................................................................................................. 69
A Hybrid Computational Model for Mechanical Design
B. S. Rangaraj, J. G. Thompson, and P. Krishnaswami .................................................. 75
Interaction-Based Schematics for Representing Mechanical Systems
R. C. Wohlsen ................................................................................................................... 83

EXPERT SYSTEMS
Design for Serviceability Expert System
Christopher Bryan, Charles Eubanks, and Kosuke Ishii .................................................... 91
Computer Based Expert System for Rotating Machinery: Preventive and Predictive Maintenance
El-Adawi S. El-Miwally, M. A. Rayan, N. H. Mostafa, and
Yehia M. Enab ................................................................................................................... 99
Enhancing the Power of Expert Systems Through Interprocess Communication
Brian T. Murren and Andrew W. Crapo ........................................................................... 105
OPGEN: A System to Identify and Evaluate Potential Applications of Knowledge Based Systems  
Samir Rohatgi, James H. Oliver, and Stuart S. Chen .................................. 111

PLANNING AND MODELLING
A Heuristic Application-Specific Path Planner for Robot Motion Planning  
David G. Alciatore .......................................................... 121
A Knowledge Based Automatic Pipe Routing System  
D. Jain, M. Chatterjee, A. Unemori, and N. Thangam .................................. 127
Prolog for Finite-Element Model Definition  
P. A. Strooper, M. Stylianou, and B. Tabarrok ........................................ 133

COMPUTER AIDED MECHANISM DESIGN
A Graphic Simulator for the Study of Robotic Tracking and Catching Operations  
Jean Côte, Clément M. Gosselin, and Denis Laurendeau ........................................ 141
Computer Aided Design of Bucket Type Elevators and Belt Conveyors  
Birol Kilkis and S. Selçuk Sager .................................................. 147
Development of a Design Automation Software for Crane Design With F.E.M. Rules  
Zühal Ünsal and Abdulkadir Erden .................................................. 151
An Automated Variable Geometry Exhaust Nozzle Design Analysis System  
C. E. Wolfe, B. S. Bagepalli, and J. H. Bertke ........................................ 159

COMPUTER AIDED ENGINEERING ANALYSIS
The Development of an Automatic Three-Dimensional Mesh Generator Via Modified Ray Casting  
Cengiz Yeker and Ibrahim Zeid .................................................. 165
The Optimal Design of a Multi-Axis Load Transducer  
Mary J. Wickham, Donald R. Riley, and Christopher J. Nachtsheim ......................... 175
Simulation of Large and Complex Structures With Multiple Contacts and Wear  
B. S. Bagepalli, S. Dinc, B. Jildi, I. Imam, J. Barnes, and  
C. Slocum .......................................................... 181
Effective Utilization of Design Geometry for Numerical Analysis Applications  
Jeffery M. Louie .......................................................... 191
Elements of a Software Architecture for a Rapid Prototype Test and Evaluation System for  
Experimental Structural Dynamics  
Robert L. West and Wei Wang .......................................................... 211

FEATURE BASED CAD/CAM
Using Automatic Feature Recognition to Interface CAD to CAPP  
Eric Wang .......................................................... 215
Conversions in Form Feature Recognition Using Convex Decomposition  
Yong Se Kim and Kenneth D. Roe .................................................. 233
Intermediate Geometric and Interfeature Relationships for Automatic Group Technology Part  
Coding  
A. B. Srikantappa and R. H. Crawford .................................................. 245
Feature Based Assembly Modeling  
Jami J. Shah and Ravi Tadepalli .................................................. 253

CONCURRENT ENGINEERING
Computational Support for Concurrent Engineering of Cable Harnesses  
Hisup Park, Soo-Hong Lee, and Mark R. Cutkosky ........................................ 261
The SPEX Shell: An Approach to Automating Application and Sales Engineering Processes  
Franklyn Berry and Alexander Kott .................................................. 269
Rapid Prototyping: Cornerstone of the New Design Process  
Phillip L. Ulerich .......................................................... 275
Synergetic Design Systems  
Jami J. Shah, Susan D. Urban, Siva P. Raghupathy, and  
Mary T. Rogers .......................................................... 283
KNOWLEDGE-BASED CAD SYSTEMS
A High-Performance Method for Comparing CAD Drawing Revisions
Darius Kang, William S. Sun, and Noel L. Lee .................................................. 291
Quality Improvement of the Product Development Process Using Performance Metrics
Timothy L. Johnson and Kevin J. Dooley ............................................................. 295
Complete Three-Dimensional Aerodynamic CAE System and Artificial Intelligence Control System for Centrifugal Compressor
Yoshiteru Fukao, Toshiaki Baba, Takeshi Inaba, and
Fumikata Kano ..................................................................................................... 303
Computer Aided Design of Cables for Large Computer Systems: A Case Study in Quick Prototyping
Jacob Korngold and Gary Gabriele ................................................................. 311

COMPUTER AIDED TOLERANCE MODELING
Representing Geometric Tolerances in Solid Models
James Guilford and Joshua Turner ................................................................. 319
Simplification of Feature Based Models for Tolerance Analysis
Peter Martino ....................................................................................................... 329
Worst Case and Statistical Tolerance Analysis of the Daughter Card Assembly
James Guilford, M. Sethi, and Joshua Turner .................................................... 343
Analysis of Complex Geometric Tolerances by Linear Programming
Peter Martino ....................................................................................................... 351

COMPUTER AIDED PROCESS PLANNING
On the Effects of Parallelism on Computer-Aided Process Planning
Jordan B. Levin and Debasish Dutta ................................................................. 363
A Computer-Aided Fixture Design System With Process Planning Integration for Prismatic Parts Manufactured on CNC Machining Centers
S. Prombanpong, R. L. Lewis, and A. B. Bishop .................................................... 369
Automated Gating Plan Synthesis for Injection Molds
Mukul Saxena and Rohinton K. Irani ............................................................... 381
A Logic-Based Integrated Manufacturing Planning System
Jerry Y.-H. Fuh, Chao-Hwa Chang, and Michel A. Melkanoff .......................... 391

COMPUTER AIDED MANUFACTURING
Experiment and Computer Modelling of the Filling Flows in Pressure Die Casting
J. Hu, S. Ramalingam, G. Meyerson, E. R. G. Eckert, and
R. J. Goldstein ..................................................................................................... 401
Non-Constant Parameter NC Tool Path Generation on Sculptured Surfaces
Yunching Huang and James H. Oliver ............................................................... 411
An Assessment of Assembly Mating Conditions in the Context of a Product Model
James E. Baxter, Neal P. Juster, and Alan de Pennington ................................ 421
A Method for Selecting Measurement Points on Planar Faces of Objects With Holes
Hayri O. Vardar and Tulga M. Ozsoy ............................................................... 429

VISUALIZATION AND SIMULATION
Efficient Modeling Method of Sheet Objects
Kunwoo Lee and Byung Wook Kwon ............................................................... 437
Minkowski Sums: A Simulation Tool for CAD/CAM
Anil Kaul ............................................................................................................. 447
Vehicle Occupant Crash Simulation Using SuperCrash
Shyh-Chour Huang and Joy Yir-Shyuan Jair ..................................................... 457
SIMPA: A Graphic Simulator for the CAD of Parallel Manipulators
Clément M. Gosselin, Simon Laverdière, and Jean Côte ............................... 465
COMPUTATIONAL FLUID DYNAMICS IN INDUSTRY

Numerical Design Method to Obtain Minimum Pressure Losses in Duct Elbows

James C. Paul and David R. Noles ....................................................... 473

Particle Transport in CVD and Diffusion Processes

Ahmed Busnaina, Xiaoying Zhu, and Xiaowei Zheng ................................ 483

Three-Dimensional Flow and Transport in a Jet-Driven Rectangular Chemical Vapor Deposition (CVD) Reactor

R. S. LaFleur and A. K. M. S. Islam ................................................. 491

Minimizing Drag Coefficients Using Bezier Technique

Reda Bata, Sunil Katragadda, Randolph Churchill, and Wenguang Wang ............................................................. 499

Interfacing PATRAN or ANSYS Programs to FIDAP for Analysis of Realistic Engineering Problems

Mohammad Ali Jamnia and William Chu ........................................... 507

Thermal Analysis of Air-Cooled Electronic Equipment

Y. I. Sharaf-Eldeen and Kannan Rengarajan ...................................... 517

S. Y. Ho and A. J. Przekwas ............................................................... 527

A Computer Model for Thermofluid Analysis of Vehicle Cooling Systems

Alireza Veshagh, Changyou Chen, and Richard Moffatt .......................... 537

MONITORING AND GRAPHICS APPLICATIONS

A Window Based Graphical User Interface for a Supersonic Combustion Fortran Code

T. Gary Yip and Ajay R. Patel ............................................................ 549

Development and Application of Graphics Displays for a Mini-Computer Based Vibration Analysis System

Bill Trevillion ......................................................................................... 555

An Implementation of Monitoring Systems Using Microprocessor Building Blocks

Qiang Li and T. Gary Yip ........................................................... 563

A Successive Approximation ADC Simulation Project

T. Gary Yip and Elizabeth B. Nadworny ............................................. 567

COMPUTATIONAL FLUID DYNAMICS I

Natural Convection-Radiation Induced Flows of Air Over a Horizontal Plate

H. Chuang ......................................................................................... 573

A Study of a Sharp 90 Degree Curved Flow

R. H. Kim ............................................................................................. 579

A Comparative Study of Numerical Techniques for Nonequilibrium Method of Characteristics

T. Gary Yip, David M. Crook, and Timothy P. Buell .............................. 585

COMPUTATIONAL APPLICATIONS IN FLUID MECHANICS

The Use of Von Karman’s Similarity Hypothesis in Turbulent Fluid Flow Computation

David J. Foster .................................................................................. 591

Heater Configuration Design of a Pultrusion Die Using Design Optimization Techniques

T. W. Awa, Robert L. West, and H. L. Price .......................................... 601

Analysis of Pressure Suppression Pool Swell Using Microcomputers

P. Saha, B. K. Rakshit, and P. Mukhopadhyay ..................................... 611

Best-Estimate Analysis of Loss-of-Coolant Accident in Pressurized Heavy Water Reactors Using Microcomputers

P. Saha, T. K. Das, A. Chanda, and S. Ray ........................................... 619

COMPUTATIONAL FLUID DYNAMICS II

Computational Analysis of Spin-Up From Rest of a Stably-Stratified Fluid in a Cylinder

Daniel T. Valentine ............................................................................. 631

Optimized Accelerating Parameters of Convergence for the Navier-Stokes Equations

Bashar E. AbdulNour .......................................................................... 639

A Nonorthogonal Grid System and Its Application to Fluid and Heat Transfer Problems

Afif S. Halal and David G. Lilley ....................................................... 645
