Computational Fluid Dynamics '92

Volume 1

Proceedings of the First European Computational Fluid Dynamics Conference
7-11 September 1992, Brussels, Belgium

Edited by

Ch. Hirsch
Vrije Universiteit Brussel
Brussels, Belgium

J. Périaux
Dassault Aviation
Saint-Cloud, France

W. Kordulla
Institute of Theoretical Fluid Dynamics
Göttingen, Germany

1992

ELSEVIER
AMSTERDAM • LONDON • NEW YORK • TOKYO
CONTENTS

Volume I

Session I. Algorithm

Multidimensional upwind schemes for scalar advection on tetrahedral meshes
G. Bourgois, H. Deconinck, P.L. Roe and R. Struijs 1

Stable and low diffusive hybrid upwind splitting methods
F. Coquel and M.-S. Liou 9

A unified wall boundary condition treatment for cell-centered finite volume discretizations of the
Euler and Navier–Stokes equations
G. Degrez 17

GMRES acceleration of Kinetic Flux Vector Split (KFVS) Euler code
S.M. Deshpande and A.K. Dass 25

Discretization of the parabolised Navier–Stokes equations
L.R.C. Eça and M. Hoekstra 29

Dissipation models for central difference schemes
P. Eliasson 37

A simple multidimensional Euler scheme
M. Fey and R. Jeltsch 45

Cell-centered multidimensional upwind algorithms and structured meshes
Ch. Hirsch and P.V. Ransbeeck 53

Numerical solution of Euler and Navier–Stokes equations for 2D transonic problems
T. H&lek, M. Hunček and K. Kozel 61

Faster relaxations for non-structured MG with Voronoi coarsening
E. Morano, H. Guillard, A. Dervieux, M.P. Leclercq and B. Stoufflet 69

Nonstandard approximation on spectral techniques in convection diffusion problems
F. Olmos, E. Checa, F. Chinesta, R. Torres and T. Casasus 75

A perspective of recent developments in the finite element simulation of metal forming processes
E. Oñate 81

A comparison between finite element and finite volume methods in CFD
E. Oñate and S.R. Idelsohn 93

A robust multigrid method for a discretization of the incompressible Navier–Stokes equations in
genral coordinates
C.W. Oosterlee and P. Wesseling 101
A preconditioning technique for Chebyshev collocated advection diffusion operators
A. Pinelli, C. Benocci and M. Deville 109

Newton-like methods for Navier–Stokes solution
N. Qin, X. Xu and B.E. Richards 117

A discontinuity capturing SUPG formulation using quadratic element
T.W.H. Sheu, P.G.Y. Huang and M.M.T. Wang 125

Flow visualization by ray casting in curvilinear systems and feature-oriented image enhancement
S. Shirayama 131

Some applications of the third-order upwind finite element approximation
M. Tabata and S. Fujima 139

An ILU coupled node fill in preconditioner for the Navier–Stokes equations
S.Ø. Wille 147

A dynamic solution-adaptive unstructured parallel solver
R. Williams 155

A study on the acceleration of numerical simulations with qualitative reasoning and fuzzy logic
K. Yamaoka and M. Yamamoto 163

Session II. Transition and Turbulence

Numerical model for turbulent diffusion flames with applications
X.S. Bai and L. Fuchs 169

Large eddy simulation of flow in a square duct
E. Balaras and C. Benocci 177

Simulation of boundary-layer transition: receptivity to spike stage
F.P. Bertolotti and J.D. Crouch 183

Laminar and turbulent flow over optimal riblets

Three-dimensional turbulent flow simulation for two different hydraulic turbine draft tubes
P. Drtina, E. Göde and A. Schachenmann 199

Rate of strain tensor statistics in compressible homogeneous turbulence
G. Erlebacher and S. Sarkar 207

Comparative testing of subgrid-scale models for wall-bounded turbulent flows
C. Härtel and L. Kleiser 215

Numerical studies of the Eulerian–Lagrangian transformation in two-dimensional isotropic turbulence
J.S. Hesthaven, J.P. Lynov, A.H. Nielsen, J. Juul Rasmussen and H.L. Pécseli 223

Development of a finite element Navier Stokes solver using unstructured adapted grids, applications to turbulent flows
C. Kasbarian, O. Lebigre, M. Mallet, B. Mantel, M. Ravachol and M. Tentillier 229

Numerical investigation of supersonic turbulent flows by a mixed finite volume/finite element method
C. Le Ribault, M. Buffat and D. Jeandel 237
Use of direct simulation data for improvement of near-wall $k-\varepsilon$ turbulence models
P.-Å. Lindberg and S. Johansson 241

Large-eddy simulation of a turbulent jet
M. Pourquie, J. Eggels and F.T.M. Nieuwstadt 247

Large eddy simulation of unsteady turbulent swirl flow in a pump intake
T. Takata, Y. Kawata, T. Kobayashi, N. Taniguchi and Y. Morinishi 255

Application of algebraic-RNG eddy viscosity model to simulation of transitional boundary layer flow
A. Yakhot, O. Kedar and S.A. Orszag 263

Session III. Hypersonic Reacting Flows

Are similarity parameters relevant to experimental simulations in high enthalpy nozzle flows?
R. Abgrall and A. Merlo 273

Heat transfer on bent-nose biconic in hypersonic flow
N. Arai and T. Furuya 279

Direct molecular simulation (DSMC) of shock tube flow
D.J. Auld 285

Numerical computations around model with nonequilibrium upstream conditions
Y. Burtschell, M.C. Druguet and D. Zeitoun 291

Optimal shape design in hypersonic aerodynamics and electromagnetics
F. Carrere and P. Le Tallec 299

Fully coupled approach to the calculation of nonequilibrium hypersonic flows using a Godunov-type method
S. Jonas, H.-H. Frühauf and O. Knab 305

Coupled Euler/boundary layer methods for chemically-reacting hypersonic flows
M.L. Sawley and S. Wüthrich 315

Comparative study of inviscid and viscous hypersonic flows over an STS
W. Schröder and F. Mergler 323

Session IV. Incompressible Flows

A numerical investigation of flow around a square-section cylinder mounted with a splitter plate
N. Arai and S. Saitoh 331

Buoyancy and thermocapillary three-dimensional convection at moderate Pr: numerical study
M. Behnia, F. Stella and G. Guj 337

The computation of highly nonlinear free surface waves with a three-dimensional panel method
J. Broeze, E.F.G. Van Daalen and P.J. Zandbergen 345

Effects of splitter plate on wake formation from a circular cylinder: a discrete vortex simulation
A.R. Cete and M.F. Unal 349

Flow prediction in multiply connected domains using stream function-vorticity formulation
A.G. Churbanov and Yu.A. Ermakov 357

Fourier/Chebyshev methods for the incompressible Navier–Stokes equations in infinite domains
R. Corral and J. Jiménez 361
An efficient discrete vortex method for low Reynolds number incompressible flows
D.R. Emerson, A.P. Burrows and P.G. Bellamy-Knights 369

A numerical investigation of 3-D flow past an infinite cylinder
M.O.L. Hansen, J.N. Sørensen and V.A. Barker 375

A new formulation for incompressible viscous flows
W. Jia and Y. Nakamura 383

Least-squares finite element solution of 3D incompressible Navier–Stokes problems

Break of symmetry and early transition in a symmetric sudden expansion flow
L. Kaiktsis 397

Fast implicit solvers for the incompressible Navier–Stokes equations
J. Küffer 407

A spectral algorithm in the vorticity-stream function formulation for two-dimensional flows with no-slip walls
J.P. Lynov, E.A. Coutsias and A.H. Nielsen 413

An experimental and simulation study of mould filling combined with heat transfer
F. Mampaey and Z.A. Xu 421

Lagrangian finite-element analysis of low viscous and inviscid free-surface fluid flow. Application to metal casting flow using a remeshing technique
F. Muttin, Y.H. Kim, T. Coupez, M. Bellet and J.L. Chenot 429

Computational evaluation of different discretisation schemes for recirculating laminar flows
B. Norén 435

Numerical simulation of free surface melting inside a rotating cylinder
M. Prud'homme, T. Hung Nguyen and P.G. Mao 443

An adaptive fast multipole moment technique for calculating flow around two-dimensional bluff bodies
M. Rudman, M.C. Thompson and K. Hourigan 449

An implicit finite-difference scheme for solving the unsteady 3-D incompressible Navier–Stokes equations
B.R. Shin, T. Ikohagi and H. Daiguji 457

Application of the highest order finite difference scheme to solve incompressible Navier–Stokes equations
C. Shu and B.E. Richards 465

On the 3D multigrid and ADI algorithms for the numerical solution of Navier–Stokes equations on distributed memory multiprocessors
D. Tromeur-Dervout and L. Ta Phuoc 473

Vectorizable preconditioning techniques for solving the Boussinesq equations
A. van der Ploeg and F.W. Wubs 481

Viscous flow simulation using the discrete vortex diffusion velocity method
J.H. Walther 489

Numerical solution of the shallow-water equations on a beach using the weighted average flux method
G. Watson, D.H. Peregrine and E.F. Toro 495
The discretization of the 2D incompressible Navier–Stokes equations on a co-located grid
P. Wilders and W. Couzy 503

Session V. Two-Phase Flow and Combustion

Numerical simulation of the 3D turbulent flow around the combustor dome of an aircraft engine
G. Brun, M. Buffat, S. Aubert and J.L. Schultz 511

The application of CFD to the modelling of fires in complex geometries
A.D. Burns, D.S. Clarke, P. Guilbert, I.P. Jones, S. Simcox and N.S. Wilkes 517

Modeling of fluid flow and coal combustion in industrial furnaces applying a domain decomposition method
B. Epple, U. Schnell and R. Schneider 525

A 3D multi-block structured version of the KIVA 2 code
C. Habchi and A. Torres 533

A control volume finite element method for two-dimensional dilute fluid–solid particle flows
C. Masson and B.R. Baliga 541

Efficient computation of the pre-asymptotic behaviour of unstable two-phase flow problems
W.A. Mulder 549

Analysis of two fast-chemistry combustion models and turbulence modeling in variable density flow
J. Nisbet, L. Davidson and E. Olsson 554

A high resolution approach to two-phase reactive flows in two dimensions
W. Speares and E.F. Toro 565

Three-dimensional overlapping grids for internal combustion engine geometries
J.Y. Tu and L. Fuchs 573

Colour Section

Volume II

Session VI. Internal Flows

A robust inverse inviscid method for airfoil design
P. Chaviaropoulos, V. Dedoussis and K.D. Papailiou 581

Numerical simulation of unsteady incompressible viscous axisymmetric internal flow with swirl
M. Hafez and E. Shabana 589

Numerical simulation of secondary flows and longitudinal roll-cell structures in rotating channels
A.E. Khodak, A.I. Kirillov, V.V. Ris and E.M. Smirnov 597

Inverse method for transonic cascade and channel design using moment function formulation
G.-L. Liu and J.H. Guo 605

Validation of viscous and inviscid computational methods around axial flow turbine blades
B. Petot and A. Fourmaux 611
