Proceedings of the Sixth International Cryocoolers Conference
Plymouth, Massachusetts
October 25–26, 1990
Volume II

Edited by Geoffrey Green and Margaret Knox
David Taylor Research Center

Approved for public release; distribution is unlimited.
CONTENTS—VOLUME I (continued)

SESSION IV A—STIRLING COOLERS I AND SESSION IV B—JOULE-THOMSON COOLERS I

Stirling Cooler Optimization, David Gedeon .......................... 203

Development of Stirling Cycle Cooler and Integration of this Cooler into a Biological Storage Freezer, Russell C. Tipton ......................... 217

Considerations in Using Joule-Thomson Coolers, Glenn E. Bonney and Ralph C. Longsworth ................................................. 231

Characterization of Coolants for Joule-Thomson Cryocoolers, B. Maytal and S.W. Van Sciver ..................................................... 245

Recent Developments in Clog Resistant and Demand Flow Cryostats, J.W. Prentice, G. Walker and S.G. Zylstra ............................ 257

VOLUME II

SESSION V—REGENERATOR/RARE EARTH

Two-Stage GM Refrigerator with Er$_3$Ni Regenerator for Helium Liquefaction, Toru Kuriyama, Masahiko Takahashi and Hideki Nakagome ................................. 3

High Efficient 4 K Refrigerator (GM Refrigerator with JT Circuit) Using Er$_3$Ni Regenerator, Hideki Nakagome, Ryuichi Hakamada, Masahiko Takahashi and Toru Kuriyama ................................. 15

Two-Stage Gifford-McMahon Cycle Cryocooler Operating at about 2 K, Takashi Inaguchi, Masashi Nagao and Hideto Yoshimura ................................. 25

Generation of Superfluid Helium by a Gifford-McMahon Cycle Cryocooler, Masashi Nagao, Takashi Inaguchi, Hideto Yoshimura, Shirou Nakamura, Tadatoshi Yamada and Masatami Iwamoto ......................... 37

SESSION VIA: STIRLING COOLERS II AND SESSION VIB—JOULE-THOMSON COOLERS II

Development of an Efficient, Bellows Driven Stirling Cycle Cryocooler, Sibley C. Burnett, John R. Purcell and Carl J. Russo ............................ 51

Superfluid Stirling Refrigerator: A New Method for Cooling Below 1 Kelvin, V. Kotsubo and G.W. Swift ............................................. 59

A Linear Drive Stirling Cycle Cryocooler for EO/IR Applications, Alan L. Weeks ............................................................. 71

Vibration Characteristics of Small Rotary and Linear Cryogenic Coolers for IR Systems, W.J. Gully and M.W. Hanes ................................. 85

A Gas-Fired Duplex-Stirling Cryorefrigerator to Liquefy Natural Gas for Automotive Fuel, Woody Ellison, Ernest E. Atkins, Dr. Graham Walker and Steven G. Zylstra ........................................ 97
CONTENTS—VOLUME II (continued)

Thermodynamic Analysis of Mixed Fluid Joule-Thomson Cryocoolers,
B. Maytal and S.W. Van Sciver ................................................. 111

A Long Life Oil Lubricated J-T Cryocooler for Space Applications,
James Lester, Robert Levenduski and Roger Scarlotti .................. 137

Development of a Fast Cooldown J-T Cooling System, G. Pahler,
H. Maier, R. Maier and M. Bareiss ........................................ 153

Development of a Fast Cooldown, Joule-Thomson Microminiature
Refrigerator and Vacuum Package, for Operation of Infrared,
Focal Plane Arrays at 70K, W.A. Little and R.L. Paugh ............... 161

Recent Practical Applications of Open Cycle, Compressor Based
Joule-Thomson Cooling, Paul Benson ........................................ 171

SESSION VIIIA—MAGNETIC COOLERS AND
SESSION VIIIB—SPACE COOLERS II

Design of the Regenerative Magnetic Refrigerator Operating
Between 4.2 K and 1.8 K, Sangkwon Jeong and Joseph L. Smith, Jr. .... 189

Analysis of a Magnetic Refrigerator Operating Temperature
Between 10 K and 1.4 K, Takenori Numazawa, Hideo Kimura,
Mitsunori Sato and Hiroshi Maeda .......................................... 199

A Preliminary Numerical Study of Magnetic Refrigeration,
C. Carpetis ............................................................................. 215

The Magnetocaloric Effect in Nanocomposites, Robert D. Shull,
Lydon J. Swartzendruber and Lawrence H. Bennett ....................... 231

Rare-Earth Intermetallic Components for Magnetic Refrigerants,
Alexander Tishin ...................................................................... 247

Supercritical Helium Dewar Space Flight Results, Paul Forney ....... 251

A Continuously-Operating Dilution Refrigerator for Space
Applications, Pat R. Roach ...................................................... 263

Heat Driven Cryocooler for Satellite Bus Use, Robert M. Lerner ..... 273

Key Attributes and Generic Requirements for Cryocooler
Application on Microsats, John Lester Miller ............................. 285

Development of Small Vuilleumier Cryocoolers for Space Use,
Masakuni Kawada, Shunsuke Hosokawa and Isao Kudo ............... 295

Immersion vs Conduction Cooling of a Niobium Josephson
Junction Integrated Circuit: Characterization and Performance
Correlations at Low Frequencies, Edward Hershberg, Kimberly
Godshalk, Vallath Nandakumar, Soo Young Lee and Bruce Murdock .... 317

Effect of Tube Temperature Profile on Thermal Acoustic
Oscillations in Liquid Hydrogen Systems, Y.F. Gu and
K.D. Timmerhaus ...................................................................... 329
CONTENTS—VOLUME II (continued)

Simulation of a Near-Isothermal Expander, M.G. Norris, J.L. Smith, Jr.
and J.A. Crumleton ....................................................... 341

Development of a He II Gap Heat Switch for a 2K to 10K ADR,
Ali Kashani and Ben P.M. Helvensteijn .............................. 355

Micro and Nanno Cryocoolers: Speculation on Future
Development, Graham Walker and Edward R. Bingham .......... 363
