| G1  MORICE, Ph.:  
   Some recent progress in CFD at ONERA; ................................. | 1 |
| G2  MIYAKE, Yutaka KAJISHIMA, Takeo:  
   A discussion on turbulent flows in pipes and channels on the basis of large scale LES; | 7 |
| G3  OERTEL Jr., H.:  
   Validation of Navier-Stokes methods for aerospace applications; .................. | 16 |
| G4  TAGO, Yoshio:  
   Numerical simulations with Fujitsu supercomputer FACOM VP; .................. | 23 |
| A01 SATOFUKA, Nobuyuki:  
   Numerical simulation of the Euler and Navier-Stokes equations on parallel computers; .................................................. | 28 |
| A02 CAPDEVILA, H. PAHLKE, K.:  
   Concurrent processing of CFD codes used in aerodynamic design; .................. | 35 |
| A03 RUSANOV, V. V. BELOVA, O. N. KARLIN, V. A.:  
   About solving the PNS equations by marching method; .................. | 43 |
| A05 PLATFOOT, R. A. FLETCHER, C. A. J.:  
   Computation of internal flows demonstrating severe curvature; .................. | 46 |
| A06 DWYER, Harry A. YAM, C.:  
   Multi-dimensional low Mach number numerical simulations; .................. | 52 |
| A07 WU, Jiang Hang:  
   The new numerical methods for solving the convection-dominated problems in fluid dynamics; .................. | 59 |
| A08 WU, Huamo:  
   A new class of accurate high resolution schemes - analysis and applications; .......... | 64 |
| A10 LIU, C. MCCORMICK, S.:  
   Multigrid, the fast adaptive composite (FAC) grid method for solving flow problems; .................. | 74 |
| A13 FU, Dexun MA, Yanwen:  
   Efficiency and accuracy of numerical methods for solving the aerodynamic equations; .......... | 78 |
| A15 BRISTEAU, M. O. PIRONNEAU, O. VALLET, M. G.:  
   Numerical analysis for compressible viscous isentropic stationary flows; .................. | 86 |
| A16 GRASSO, F.:  
   Numerical solution of viscous high speed flows; .................. | 93 |
| A17 MATSUNO, Kenichi:  
   A high order time-accurate scheme and its applications to airfoil flows; .................. | 106 |
| A18 TAKI, Shiro:  
   Numerical simulation of standing detonation induced by oblique shock wave; .......... | 113 |
| A19 KAWAI, Masafumi ANDO, Yasunori IKEDA, Hideo FUJIMORI, Toshiro OHMORI, Yasunori FUKUDA, Masa Hiro:  
   Numerical solution of chemically reacting viscous flows; .................. | 119 |
A20 MATSUMURA,Hiroshi KOBAYAKAWA,Makoto:
Application of a digital control theory for generating adaptive grids; ................. 124
A21 MALLET,M. PERIAUX,J. STOUFFLET,B.:
Finite element methods for highly compressible Euler/Navier-Stokes flows and related applications in aerospace engineering; .............................. 130
A23 SIDOROV,A.F.:
Semi-analytical methods for solving nonlinear three-dimensional gas dynamic problems based on special constructions of series; .............................. 137
A24 D'HUMIÈRES,D. LALLEMAND,P. RIVET,J.P.:
Lattice gases for simulations of fluid flows; ......................................................... 142
A26 ZHU,Zi-Qiang BAI,Xue-Song:
The transonic nonisentropic potential calculation; ............................................. 147
A29 FORESTIER,A.J. BUNG,H.:
Boundary conditions in a TVD scheme for Euler equation in a finite element formulation; ................................................................. 158
A30 KOSHIIZUKA,Seiichi OKA,Yoshiaki KONDO,Shunsuke:
A staggered differencing technique on boundary-fitted curvilinear grid for incompressible Navier-Stokes equation written with physical components; .................. 163
A31 BELOTSEKOVSKY,Oleg M.:
Direct numerical modeling of free induced shear turbulence; ............................. 170
A33 KOVENYA,V.M.:
Algorithms for the Navier-Stokes equations of compressible gas; ......................... 175
A34 TAMURA,Yoshiaki FUJII,Kozo:
Use of graphic workstation for computational fluid dynamics; ........................... 180
B01 WOLFSHTEIN,Micha:
Trends and prospects in computations of turbulent flows; .................................. 187
B03 WATANABE,Takashi NAKAMURA,Ikuo MIYAMA,Masafumi:
A finite element analysis of a two-dimensional asymmetric relaxing channel flow by the k-ε model; ................................................................. 193
B04 SU,Ming-De:
Large eddy simulation of turbulent flow and its prospect; .................................... 200
B06 HORIUTI,Kiyoshi:
Anisotropic representation of the Reynolds stress in large eddy simulation of turbulent channel flow; ................................................................. 206
B07 HIRAI,Shuichiro TAKAGI,Toshimi TAKADA,Masahiko:
Calculation of turbulent swirling flow in a long pipe with Reynolds stress closure; ... 213
B09 ROZHDESTVENSKY,B.L.:
Numerical simulation of turbulent flows in channels and pipes: methods, results and prospects; ................................................................. 218
B10 GUSHCHIN,V.A. KONSHIN,V.N.:
Numerical simulation of the unsteady separated fluid flows in a wide range of Reynolds numbers; ................................................................. 222
B11 KURKAL,Krishna MUNUKUTLA,Sastry:
Computational study of a symmetric turbulent wake; ........................................... 227
B12  MYONG, Hyon-Kook KASAGI, Nobuhide:
Toward an anisotropic k-ε turbulence model taking into account the wall-limiting behavior of turbulence; .......................................................... 232

B13  YOSHIZAWA, Yoshimasa HOZUMI, H.:
Numerical calculation of viscous flow in and around a liquid droplet; .................. 238

B14  SONG, Charles C.S.:
Turbulent flows in two and three-dimensional diffusers: Computation and comparison with experimental data; .......................................................... 244

B15  MOCHIMARU, Yoshihiro:
Numerical simulation of heat and fluid flow past a sphere, using a spectral method; 250

B16  INOUE, Osamu:
Coherent structures of highly excited mixing layers; ......................................... 258

B17  KONDOH, Tsuguo NAGANO, Yasutaka:
Numerical investigation of three-dimensional separating and reattaching flow downstream of a backward-facing step; .................................................. 263

B18  ARMFIELD, S.W.:
Direct simulation of unsteady natural convection in a cavity; ............................ 271

B19  OSHIMA, Koichi OSHIMA, Yuko IZUTSU, Naoki:
Topological study of three-dimensional vortex interactions; ................................. 277

B20  TOLSTYKH, A.I.:
The third order compact approximation for incompressible flows; ....................... 283

B22  ABOU BAKER, A. ROESNER, K.G.:
Numerical solution of the flow around a moving cylinder; ................................ 289

B23  KU, Hwar-Ching TAYLOR, Thomas D.:
Solutions of two- and three-dimensional incompressible flow in complex geometries by the pseudospectral matrix element methods; ............................ 294

B24  HATANAKA, K. HAYASHI, M. KAWAHARA, M.:
Numerical investigations of solving unsteady, incompressible, viscous fluid flow by finite element method; .......................................................... 302

B25  BAKER, A.J. IANNELLI, G.S.:
On a robust implicit finite element CFD algorithm for aerodynamics; .................. 309

B26  HABASHI, Wagdi G. BARUZZI, Guido S. PEETERS, Martin F.:
A Newton-Galerkin algorithm for computational fluid dynamics; ...................... 316

B27  YOSHIHARA, Hideo:
Problem areas in applied computational fluid dynamics; .................................. 324

B28  DADONE, Andrea FORTUNATO, Bernardo:
Computation of steady three dimensional transonic internal flows; ..................... 330

B29  YAMAMOTO, Makoto:
Calculation of tip leakage flow with three dimensional Euler code; .................. 337

B30  KUMAR, Anand:
Flow calculation over delta-wing using the thin-layer Navier-Stokes equations; .... 342

B31  PIVA, R.:
The boundary integral equation method for viscous and inviscid flows; .......... 348
B32 OHYAMA, Takumi:
Boundary element analysis for run-up of nonlinear water wave; 356

B33 KAKUDA, Kazuhiko; TOSAKA, Nobuyoshi:
Numerical analysis of viscous fluid flow problems by the generalized boundary element method; 364

B34 NISHIMURA, Hitoshi; TAKEWAKA, Satoshi:
Two-dimensional water wave analysis using Lagrangian coordinate; 370

C01 HICKMAN, Roy S.; LOCASCIO, James Gaspare:
Simulation of water waves generated by ground motion: island coastal interaction; 375

C02 CHEN, Han-Lin; OSHIMA, Koichi; HINADA, Motonori:
Numerical analysis of thermocapillary and evaporating flow at low Bond number; 380

C03 IMAMURA, Fumihiko; SHUTO, Nobuo:
Tsunami propagation simulation by use of numerical dispersion; 390

C04 HOLZ, Peter; LEHFELDT, Rainer:
Numerical simulation techniques for currents and sediment transport in shallow waters; 396

C05 NETA, B.; WILLIAMS, R.T.:
Analysis of finite element methods for the solutions of the vorticity-divergence form of the shallow water equations; 402

C06 SHOKIN, Yu.I.; KHAKIMZYANOV, G.S.:
Numerical calculation of potential free-surface flows of ideal incompressible fluids; 408

C07 PANDOLFI, Maurizio:
Non-equilibrium hypersonic flows: Physics and numerics; 418

C08 ZHU, You-lan; CHEN, Bing-mu:
Some computed results of nonequilibrium gas flow with a complicated model; 428

C09 KOROBEINIKOV, V.P.:
Numerical modeling of gas flow with radiative-convective transfer of energy; 434

C10 KATSUKI, Masashi; MIZUTANI, Yukio:
Modeling of the mean reaction rate in turbulent premixed flames; 441

C11 NASTASE, Adriana:
The design of supersonic aircraft and space vehicles by using global optimization techniques; 447

C12 TAKAHASHI, Masahiro; HAYASHI, A. Koichi:
Numerical study on mixing of injecting jet into a hypersonic flow; 454

C15 ELIZAROVA, T.G.; CHETVERUSHKIN, B.N.:
Kinetal consistent finite-difference gasdynamic schemes; 493
