DISCRETE MODELS OF FLUID DYNAMICS

September 19–22, 1990  Figueira da Foz, Portugal

Editor

A. S. Alves
Universidade de Coimbra, Portugal
CONTENTS

Organizing Committees v
Acknowledgements vii
Preface ix

Macroscopic Variables in Discrete Kinetic Theory
Ph. Chauvat and R. Gatignol 1

The Trend to Equilibrium in Discrete and Continuous Kinetic Theory:  A Comparison
C. Cercignani 12

The Discrete Boltzmann Equation for Gases with Bi-Molecular Chemical Reactions
E. Gabetta and R. Monaco 22

Asymptotic Behavior of Solutions to the Discrete Boltzmann Equation
S. Kawashima 35

Some Rigorous Results on Phase Segregation for Stochastic Cellular Automata
E. Orlandi and E. Presutti 45

On the Initial-Value Problem in Discrete Kinetic Theory
H. Cabannes 60

Thermal Conduction in 2D-Lattice Gases
D. Bernardin, O. E. Sero-Guillaume and C. H. Sun 72

Plasmas with Discrete Velocities
Y. Choquet-Bruhat and G. Pichon 85

Recent Advances in the Theory of the Lattice Boltzmann Equation
S. Succi, R. Benzi and M. Vergassola 97

Solutions of the Steady Boltzmann Equation in a Slab: Applied Problems, Pure Results
R. Illner 104

On a Boundary Value Problem for the Carleman Model of the Boltzmann Equation
T. Platkowski 113
Recent Results on the Fractional Step Method in Discrete Kinetic Theory
  
  G. Toscani and W. Walus

Shock Waves for the Two Speeds $8V_i, 14V_i$ and $24V_i$ Discrete Boltzmann Models with Temperature
  
  H. Cornille

On the Decomposition of Domains in Non-Linear Discrete Kinetic Theory
  
  L. Preziosi and E. Longo

Simulation of River-Discharge Fronts with Lattice Gas Automata
  
  Ch. F. Kougiias, G. Krause and A. Rauh

Full Time Dependence of the VACF in CA-Fluids: Theory and Simulations
  
  T. Naitoh and M. H. Ernst

The Couette Flow by a Four-Velocity Model of the Uehling-Uhlenbeck Equation
  
  K. Piechór

Temperature and Heat Conductivity in Cellular Automata Fluids
  
  M. H. Ernst

Soft Modes in CA-Fluids at Finite Wave Numbers
  
  R. Brito, M. H. Ernst and T. R. Kirkpatrick

Thermodynamic Entropy and Temperature of a Nine Velocities Lattice Gas Automaton
  
  R. Rechtman and A. Salcido

On a Broadwell-Like Lattice in a Box
  
  E. Gabetta

A Class of Lattice Gas Automata for Ginzburg-Landau Type Equations
  
  J. P. Boon and D. Dab

Lattice Gas Simulations of One and Two-Phase Fluid Flows Using the Connection Machine-2
  
  S. Chen, G. D. Doolen, K. Eggert, D. Grunau and E. Y. Loh

List of Participants
