Fourth International Symposium on

Computational Fluid Dynamics

A Collection of Technical Papers

Volume II

September 9-12, 1991
University of California, Davis
Davis, California
Ü. Kaynak  
Turbulence Modeling for Applied Computational Aerodynamics .................................................. 576  

K. Khalfallah, G. Lacombe, and A. Lerat  
Direct and Iterative Solution of an Implicit Centered Scheme of Lax-Wendroff Type ...................... 582  

A. F. Khorrami and F. T. Smith  
On Hypersonic Interactive Flow Past Thin Bodies ................................................................. 588  

S.-W. Kim and T. J. Benson  
Calculations of Steady and Transient Channel Flows with a Time-Accurate L-U Factorization Scheme ................................................................. 593  

S.-W. Kim and T. VanOverbeke  
On the Anomaly of Velocity-Pressure Decoupling in Collocated Mesh Solutions ............................. 599  

S.-W. Kim and T. J. Benson  
Calculation of a Circular Jet in Crossflow with a Multiple-Time-Scale Turbulence Model .................. 605  

S.-W. Kim and T. J. Benson  
Comparison of SMAC, PISO, and Iterative Time-Advancing Schemes for Unsteady Flows .................. 611  

Y. M. Kim, H. M. Shang, C. P. Chen, J. P. Ziebarth, and T. S. Wang  
Numerical Modelling in Spray Combustion ................................................................................... 617  

Y. M. Kim, C. P. Chen, and J. P. Ziebarth  
Numerical Modeling for Liquid Rocket Combustion Instability ..................................................... 624  

I. Kiris and S. Parameswaran  
A Steady, Shock-Capturing Pressure Based Computational Procedure for Inviscid, Two-Dimensional Compressible Flows ................................................................. 633  

B. Koren, E. van der Maarel  
Analysis of Transonic Shock Configurations by a Solution-Adaptive Multigrid Technique .................. 640  

A. Kost, N. K. Mitra, and M. Fiebig  
Prediction of Laminar Flows in Rotating Cavities ........................................................................... 646  

A. Kourta and H. Ha Minh  
Shock-Wave/Turbulent Boundary Layer Interaction in Three Dimensional Transonic Flow .................. 652  

D. Kröner  
A Lax-Wendroff Type Theorem for Cell-Centered, Finite Volume Schemes in 2D .............................. 658  

J. D. Cole, M. C. Kropinski, and D. W. Schwendeman  
A Study of Critical Airfoils ............................................................................................................. 664  

A. Lafon and H. C. Yee  
Nonlinear Reaction-Convection BVPs vs. Their Finite Difference Approximation: Spurious Steady-State Numerical Solutions ................................................................. 670  

M. Lemasson, F. Pavie-Torres, P. Chassaing, and J. B. Cazalbou  
Transonic Viscous Flow Analysis for a Compressor Stator .......................................................... 676  

A. Leonard  
Lagrangian Simulation of Concentrated Vortex Structures ............................................................. 682  

C. A. Lin and M. A. Leschziner  
Three-Dimensional Computations of Transient Interaction between Radially Injected Jet and Swirling Cross-Flow using Second-Moment Closure ................................................. 687  

Z.-G. Ling and X. Deng  
Numerical Analysis of Particulate Liquid-Vapor Nozzle Flow ....................................................... 693
F. Liu and A. Jameson
Cascade Flow Calculation by a Multigrid Vertex Scheme for the Navier-Stokes Equations ........................................... 699

Z. Liu, C. Liu, and S. McCormick
High Order Finite Volume Difference and Multigrid Methods for Flow Transition in a Planar Channel ........................................... 705

W. Loeve
CFD Efforts in the Netherlands ........................................................................ 711

R. Löhner and D. Martin
Snakes, Linelets, and Implicit Unstructured Flow Solvers ........................................... 717

I. Lottati and S. Eidelman
Second Order Godunov Solver on Adaptive Unstructured Triangular Grids ........................................... 723

R. D. Lowe, W. R. Andersen, and P. S. Paden
A Computational and Experimental Study of a Subsonic Diffuser for the LTV/Aerospatiale Panther-800 Helicopter ........................................... 728

U. Maas and S. B. Pope
Simplifying Chemical Kinetics for Use in Reacting Flow Models: Intrinsic Low-Dimensional Manifolds in Composition Space ........................................... 740

U. Maas
Detailed Numerical Simulation of Chemically Reacting Laminar Flows ........................................... 747

J. A. Mackenzie
An Accurate Cell-Vertex Finite Volume Method for the Compressible Navier-Stokes Equations ........................................... 735

A. J. Mahajan, E. H. Dowell, and D. B. Bliss
A Numerical Eigensystem Solver for a Navier-Stokes Code ........................................... 759

F. A. Mansfield and O. R. Burggraf
Numerical Investigation of Laminar Separated Trailing-Edge Flows ........................................... 765

N. N. Mansour and A. A. Wray
Direct Numerical Simulation Data: A Tool for Turbulence Modeling ........................................... 837

A. A. Markov
Numerical Simulation of Three-Dimensional Viscous Flows by Space-Marching Method, Using Global Iterations of Pressure ........................................... 771

Y. Matsumoto and H. Daiguji
A Convective-Difference Scheme using Curvilinear Coordinate Grid for 3-D Incompressible Viscous Flow Problems ........................................... 777

K. Matsuno
Improvements and Assessment of an Arbitrary-High-Order Time-Accurate Algorithm ........................................... 783

F. Mayinger, G. Pültz, and B. Durst
The Numerical Simulation of the Spreading of a Pollutant Plume in the Atmosphere Considering Change of Phase and Topography ........................................... 789

C. R. Mechoso, C.-C. Ma, J. D. Fararra, J. A. Spahr, and R. W. Moore
Distribution of a Coupled Atmosphere-Ocean General Circulation Model across High-Speed Networks ........................................... 795

S. Menon and R. W. MacCormack
Numerical Studies of Supersonic Mixing Near Three-Dimensional Flameholders Using an Implicit Navier-Stokes Solver ........................................... 801
T. J. Mitty, A. Jameson, and T. J. Baker
Solution of Three-Dimensional Supersonic Flowfields via Adapting Unstructured Meshes 807

T. Miyauchi and M. Tanahashi
Direct Numerical Simulation of Mixing Layer (Effect of Spanwise Disturbance) 813

T. Miyauchi and T. Hirata
Numerical Simulation of Supersonic Nozzle Flow (Effect of Stagnation Pressure and Wall Cooling) 843

Y. Mizuta, H. Hamada, M. Ohtani, and S. Takahashi
Numerical Analysis of Coastal Waves Considering Arbitrary Topography and Moving Coastlines 819

K. W. Morton
Cell Vertex Methods for Inviscid and Viscous Flows 825

D. P. Mrozinski and J. J. Hoffman
A Full Navier-Stokes Code for Hypersonic, Nonequilibrium Flowfield Calculations 831

M. Nagaoka, K. Ohsawa, and H. Kawazoe
Calculation of Engine Port-Cylinder Flow Using Unstructured Upwind Method 849

M. Nakao and K. Fujii
Code Development for Hypersonic Real-Gas Flow Simulations Toward the Design of Space Vehicles 855

R. A. Nicolaides
Covolume Algorithms 861

N. Nishikawa, N. Y. Abdel-Shafi, and T. Abe
Laminar Flow Analysis over Walls with Waviness 867

S. Obayashi and G. P. Guruswamy
Unsteady Shock-Vortex Interaction on a Flexible Delta Wing 873

S. Obi and M. Perić
A Co-located Finite-Volume Method for Non-Orthogonal Grids with a Second-Moment Turbulence Closure 879

T. Ogawa, K. Fujii, and Y. Tamura
Numerical Simulation of Compressible Flows Induced by an Object Moving into a Duct 885

Y. Ohya, Y. Nakamura, S. Ozono, and R. Nakayama
A Numerical Study of Flows around Elongated Rectangular Cylinders 891

Y.-R. Ou
Control of Oscillatory Forces on a Circular Cylinder by Rotation 897

F. Pavie-Torres, M. Lemasson, J. B. Cazalbou, P. Chassaing, H. Ha Minh
Numerical Study of Shock-Capturing Schemes for Unsteady Viscous Blunt Body Flows 903

D. W. Pepper, K. P. Jacobsen, and M. Rajan
A Hybrid Finite Element Method for Calculating Compressible Flow on a Massively Parallel Computer 909

M. M. Pervaiz, S. C. Richtsmeier, M. E. Gersh, and L. S. Bernstein
Radiation Estimates for Collisionally Excited Outgassed Molecules Using a DSMC Approach 915

M. M. Pervaiz
Strategy Combining Regionally Adapted Processes (SCRAP) for Physically and Geometrically Complex Configurations 921

A Multi-Dimensional Upwind Scheme for the Euler Equations on Structured Grid |
| 1143 | I. Teipel and A. Wiedermann  
A TVD-Scheme for Computing Transonic Internal Flows |
J. F. Thompson
EAGLE and Beyond .................................................. 1149

H. Tokunaga, T. Tanaka, K. Ichinose, and N. Satofuka
Numerical Solutions of Incompressible Flows in Multiply Connected Domains by
Vorticity-Stream Function Formulation ................................ 1155

R. R. Varma and D. A. Caughey
Estimation of the Integrated Effect of Numerical Dissipation on Navier-Stokes Solutions .......... 1161

I. I. Vorozhtsov and V. L. Yumashev
Application of an Implicit Staggered Grid Scheme for Compressible Flow Computations ........... 1167

Y. Wada, S. Ogawa, H. Kubota, and T. Akimoto
On the Thermo-Chemical Models for Hypersonic Flows .................................................. 1173

T.-S. Wang
Numerical Study of the Transient Flow Separation of Liquid Rocket Engines ......................... 1179

W. P. Weatherill and M. J. Marchant
Generalised Mesh Techniques for Computational Fluid Dynamics ........................................... 1185

N. P. Weatherill, J. S. Mathur, D. K. Natakusumah, and M. J. Marchant
An Upwind Kinetic Flux Vector Splitting Method on General Mesh Topologies ....................... 1192

S. R. Wei and C. Wang
Numerical Calculations for Hypersonic Boundary Layers with Mass Addition
and Chemical Reactions .................................................. 1198

P. Wesseling, A. Segal, J. J. I. M. van Kan, C. W. Oosterlee, and C. G. M. Kassels
Finite Volume Discretization of the Incompressible Navier-Stokes Equations in
General Coordinates on Staggered Grids ................................ 1204

C. K. Westbrook, C. Corre, W. J. Pitz, and F. L. Dryer
Computer Modeling of a Two-Stage Flame ........................................................................ 1210

W. Whitlow Jr., R. M. Bennett, and T. W. Strganac
Analysis of Aeroelastic and Resonance Responses of a Wind Tunnel Model Support System .... 1216

L. B. Wigton
High Quality Grid Generation Using "Laplacian Sweeps" .................................................. 1222

T. H. Winn and E. Jones
New Concept Waverider ................................................... 1228

H. M. Wu, M. L. Yang, C. Q. Hu, and K. Oshima
FUM - An Efficient MmB Solver for Steady Inviscid Flows ............................................ 1234

Z.-y. Xie and B. Ren
A Piecewise Marching, Iterating Solver for Electron Profiles in Near-and-Far Wake .............. 1240

X.-s. Xu and Z. Li
A New Computational Method for Stokes Flow Around an Arbitrary Axisymmetric Body ........ 1245

K. S. Yajnik and M. S. Phanikumar
On the Application of Integral Transforms to Boundary Layer Problems .............................. 1250

R. Yalamanchili
Will Analogy Hold for Unsteady Turbulent Boundary Layers ........................................... 1256

C. Yam, H. A. Dwyer, and W. Sturek
Melting of Bodies Due to Aerodynamic Heating .................................................................. 1263
