Contents

PART I
PERSPECTIVES

3. What Constitutes Good Geologic Site Assessment? Anthony J. Maggio ................................................. 31

PART II
SITE ASSESSMENT

5. Phthalates: Unreliable Indicators of Hydrocarbon Contamination in Environmental Soil and Water Analysis, Brian P. Sullivan, David J. Carty, Mark J. Lupo, and Jack Felkey ................................................................. 57

6. Cone Penetrometer Testing, Hydropunch®, and Borehole Geophysics Applications for Environmental Investigations, Bruce Manchon ................................................................. 75

7. False Identification of BTEX Compounds Using EPA Method 8020, Elizabeth A. Robbins, Marina Robertson, and Gary Steube ...................... 93
8. Fuel Fingerprint Analyses Using the Simulated Distillation Procedure According to ASTM 2887, Stephen Jones .............. 111

10. Rapid Assessment of the Extent of Contamination from a Chemical Tank Train Derailment, Lawrence P. Kaelin, Renata Wynnyk, and Greg Powell ......................... 145

PART III
ENVIRONMENTAL FATE

11. A Two-Dimensional, Finite-Difference Model of the Phase Distribution and Vapor Transport of Multiple Compounds, David A. Benson ........................................ 151

12. Simulating the Free Phase Fate and Transport of Immiscible Hydrocarbons in Soil, Alexander C. Kopf and Michael J. Sullivan ........................................ 173

13. Delineating Multiple Contaminant Plumes at a Superfund Groundwater Remediation Site: A Case Study, Cindi Mitton .................................................. 189

15. The Effect of Soil Particle Size on Hydrocarbon Entrapment Near a Dynamic Water Table, Robert G. Ryan and V. K. Dhir .................................................. 213

PART IV
REMEDIATION

18. In Situ Remediation of Aquifers Contaminated with Dense Nonaqueous Phase Liquids by Chemically Enhanced Solubilization, R. W. Wunderlich, J. C. Fountain, and R. E. Jackson .................................................. 261

19. Remediation and Redevelopment: Case Study of the Corner Mini-Mall, Roy I. Thun, H. Steve Clarke, and Jeff Suryakusuma ................................................................. 279

20. Selecting Well Pumping Rates for Groundwater Remediation Design, Dan Herlihy ................................................................. 293

21. Soil Vapor Extraction from Heterogeneous Sedimentary Deposits, Daniel Tormey, Ed Simonis, and John Bower ........ 297

23. Predicting Cleanup Time and Transient VOC Concentrations in Vapor Extraction Systems with Mathematical Models, R. Maqbool Qadir ........................................ 341

24. Soil Remediation of a Lower-Permeability Unit Using an In Situ Vapor Extraction System with a Combined Thermal-Catalytic Oxidizer Vapor Treatment System, Samuel A. Marquis, Jr. ........................................ 351

27. Vadose Zone Soil Remediation of Gasoline: A Comparison Study, Dennis Dunn and Ron Hayashi .............................. 393

28. Pilot Study Results of the Bioslurry Reaction Process, Greg P. Behrens ................................................................. 403

29. The Use of Environmentally Processed Asphalt as a Contaminated Soils Remediation Method, Stephen M. Testa, Dennis L. Patton, and James L. Conca ................................. 413

PART V
SPECIAL TOPICS

30. The Lender’s Dilemma: Perils of Financing Service Station Operations, Evan C. Henry .................................................. 429

31. Onsite Bioremediation Treatment System Design and Onsite Analytical Screening of Hydrocarbon Contaminated Dredge Sediments, Michael J. Nimmons and Karl Englert ................. 445

33. The Natural Degradation of #2 Fuel Oil in Intertidal Sand, Michael J. Mulhare and Paula-Jean Therrien ............................. 467

PART VI
RISK ASSESSMENT

34. A Review of the Bioavailability of Petroleum Constituents, Jennifer Brainard and Barbara D. Beck ........................................... 481

35. Soil Ingestion in Children: Outdoor Soil or Indoor Dust? Edward J. Stanek III and Edward J. Calabrese .............................. 519
PART VII
RISK MANAGEMENT

36. Comparison of Environmental Impacts Posed by Different Hydrocarbon Mixtures: A Need for Site-Specific Composition Analyses, Mark E. Stelljes and Gayle Edmisten Watkin ........................................... 549

37. How to Minimize Risk of Liability for Environmental Professionals, Ronald D. Miller .............................................. 571

PART VIII
REGULATORY

38. Minnesota’s Rules for Land Treatment of Petroleum Contaminated Soil, George E. Johnson ........................................... 577

39. The Classification of Hydrocarbon Contaminated Soils, Ronald Pilorin ................................................................. 593

40. Closure Technologies for California LUST Sites, Jeffery Wiegand, William T. Hunt, and J. Todd Stanford .............. 599

41. Cooperative Resolution of Remedial Investigation Issues at a Superfund Site, Prewitt Refinery, New Mexico, Stephen L. Wust ................................................................. 607

42. Nonhazardous Waste-Classification of Diesel Fuel and Crude Oil Contaminated Soils in California, Scott D. Johnson and Marla L. Miller ................................................................. 615

Glossary of Acronyms ........................................................................ 627
