3rd IUFRO Conference on Wood Drying

Understanding the Wood Drying Process:
A Synthesis of Theory and Practice

August 18-21, 1992
Vienna, Austria

ISBN 3-900962-08-1

IUFRO shall not be responsible for statements and opinions advanced in this publication.
CONTENTS

FOREWORD

Developments in wood drying theory and practice since Seattle 1989
H.F. Vermaas

Wood deformability and drying stresses
Boris N. Ugolev

Wood drying modelling based on the water potential concept: recent developments
Alain Cloutier, Yves Fortin and G. Dhatt

Modelling of dynamic nonisothermal moisture diffusion
Stavros Avramidis, Thanasis Papathanasiou and Petros Englezos

Grouping tropical wood species and thicknesses by similar estimated kiln drying time using mathematical models
William T. Simpson

Critical review of wood drying models: Plan of study
Frederick A. Kamke and Manfred Vanek

Drying stresses in sawn timber determined experimentally and simulated with the program "Profil"
Christian Behnke, Grzegorz Bernatowicz and Karl-Ernst Militzer

Comparison between measured and simulated values of drying processes of sawn timber
Christian Behnke and Karl-Ernst Militzer

Application of computer method to lumber drying schedules development and prong test analysis
Boris N. Ugolev and Nikolai V. Skuratov

Determination of the surface emission factors in wood sorption experiments
Tom Morén, Jarl-Gunnar Salin and Ove Söderström

Microwave drying of hardwood: Moisture measurements by Computer Tomograph
Lena Antti

Challenges presented by the use of ultrasonic pulses to determine changes in moisture content of sitka spruce undergoing drying
John M. Taylor, B. Norton and D.J. Lavery

Using of the acoustic emission analysis for the assessment of the material quality during the drying of wood
Grzegorz Bernatowicz and Karl-Ernst Militzer

Continuous wood moisture measurement in dry-kilns with new sensor-technology
Pieter Rozema and Arnold Brookhuis
Creep deformation of the surface layer of timber boards during air circulation drying
Tom Morén and Margot Sehlstedt-Persson

Mechano-sorptive behavior of hardwood lumber: The comparison of a steam and dehumidification kiln
Robert Erickson

Moisture movement in softwood timber at elevated temperatures
Pang Shusheng, Roger B. Keey and T.A.G. Langrish

Creep behavior under varying moisture content conditions
P. Joyet, Philippe Lagiere and Daniel Guitard

A test of different methods to evaluate the diffusivity from a sorption measurement
Lars Wadsö

A new method using Kirchhoff potentials to calculate moisture flow in wood
Johan Claesson and Jesper Arfvidsson

Determination of drying stresses in wood when shrinkage is prevented: Test method and modelling
Alpo Ranta-Maunus

A theoretical and experimental investigation of the convective drying of australian pinus radiata timber
John W. Sutherland, Ian Turner and Richard L. Northway

Interrelation between heat and mass transfer during drying of wood
Panteley Kisseloff

Cupping of center boards during drying due to anisotropic shrinkage
Tom Morén and Margot Sehlstedt-Persson

Development of the theory of drying of wood
Gregory S. Shubin
Differential and integral heat energy expenditure of wood drying process
Boris Assenov Todorov and Nencho Stanev Dellisky

A new quality preserving continuous timber dryer
Jarl-Gunnar Salin

Understanding the drying at high temperature of sapwood and heartwood to improve kiln control
Patrick Perré and M. Martin

Steam conditioning after high temperature drying
Anthony N. Haslett and I.G. Simpson

Selftuning controllers for the kiln drying process
Klaus Dreiner and Johannes Welling
Effect of different drying temperatures on selected physical wood properties

Alfred Telschinger

Influence of wood drying processes on the carbohydrate matrix of wood of picea abies

Barbara Hinterstoisser, Johannes Weingärtner and Werner Praznik

Comparison of conventional and convective vacuum drying of beech

Rodolfo Neumann, A. Mielke and Georg Böhner

Effects of end-taping with korean traditional paper on the distribution of vacuum drying stresses in wood disks

Nam-Ho Lee and Hee-Suk Jung

Drying of timber under vacuum in an atmosphere of super-heated steam

Steen and Bror Moldrup

Influence of pressure steaming on the process of drying beech wood

Pavel Trebula, Ladislav Dzurenda and Ivan Klement

EDG-recommendation on assessment of drying quality

Johannes Welling and Christian Sales

New information from the research of the wood of the development of the drying equipment in the CSFR

Milan Koberle, Valentina Durisova, Trebula Tomas and Zbynek Viktorin

Results of an analysis of energy consumptions in kiln driers for sawn timber equipped with computer systems for steering

Ryszard Guzenda and Wiestaw Olek

Improvement of dryability by local steam explosion for japanese cedar

Yasushi Kanagawa, Kazuo Hayashi and Minoru Yasuzima

Dehumidification drying - new techniques can meet the environmental problems with freons (CFC's) as refrigerants

Sverre Tronstad

The effect of collector area and solar tracking on the performance of a solar timber drying kiln

Dieter E. Steinmann

Mechanical drying of wood - an alternative to seasoning drying?

Volker Schill, Volker Korger and Werner Stahl

Collapse associated internal checking in radiata pine

Wayne Miller and Ian Simpson

Corrosion in dry kiln buildings - Causes and control

Robert L. Little and William W. Moschler
Dry kilns control system

Octavia Zeleniuc

Energetic aspects of drying process of wooden chips for particleboards

Jerzy Swigon

The wood market of Iran and the importance of preserving and drying for the use of wood in Iranian Bazar

Said Amiri

Continuous wood moisture measuring in frequency technology

Thomas Bittner and Theodor Vanicek

Temperature measurement in drying wood

Karl Buchmüller and Ambros Mayrhofer

Reaction Beech Wood in drying Process

Igor Cunderlik, Jozef Kúdela and Waldemar Molinski

Discolouration of oak during drying

Josef Fellner and Friedrich Wassipaul

Collapse prevention in the drying of eucalipt wood

Ivaldo P. Jankowsky and Anizio A. Cavalcante

Moisture content field - monitoring and modelling

Ivan Kováčik and Ivan Makoviny

Theoretical and experimental view of the mechanism of the development of drying stresses and their proof

Albrecht Lühmann and Peter Niemz

First results with high temperature drying of large sized structural wood

Raimund Mauritz and Manfred Vanek

Acoustic emission during cycles of drying and moistening of wood

Waldemar Molinski and Ian Raczkowski

About the influence of the direct-fired gas heating on the drying quality

Francois More-Chevalier

Drying quality and reliability of kiln controlling systems

Jörg B. Ressel

Calibration curves for restistance-type moisture meters

Anders Samuelsson

Monitoring the drying process in industrial kilns by means of heat flux measurement

Manfred Vanek

Technology of vacuum kilns

Theodor Vanicek and Thomas Bittner

PARTICIPATING DELEGATES
