COMODIA 90

PROCEEDINGS OF
THE INTERNATIONAL SYMPOSIUM
ON
DIAGNOSTICS AND MODELING OF
COMBUSTION IN INTERNAL
COMBUSTION ENGINES

September 3–5, 1990
Kyoto, Japan

Sponsored by
THE JAPAN SOCIETY OF MECHANICAL ENGINEERS
[Engine Systems Division]

With the participation of
THE SOCIETY OF AUTOMOTIVE ENGINEERS OF JAPAN
THE MARINE ENGINEERING SOCIETY IN JAPAN

In cooperation with
JAPAN INTERNAL COMBUSTION ENGINE FEDERATION
GAS TURBINE SOCIETY OF JAPAN
THE FUEL SOCIETY OF JAPAN
VISUALIZATION SOCIETY OF JAPAN
COMBUSTION SOCIETY OF JAPAN
RESEARCH GROUP OF "EXPLORATION OF COMBUSTION MECHANISM"
under Grant-in-Aid Appropriated from
the Ministry of Education, Science and Culture of Japan
## CONTENTS

Preface ........................................................................................................ iii  
Organization .............................................................................................. iv  

### Keynote Papers

In-Cylinder Heat Transfer Research at the U.W. Engine Research Center  
*G.L. Borman* ........................................................................................ 1

Modeling of Knock in Spark-Ignition Engines  
*C.K. Westbrook and W.J. Pitz* ............................................................. 11

Development and Applications of LDA Systems in IC-Engine Research  
*F. Durst, A. Naqvi and C. Tropea* ....................................................... 21

Modelling of Fluid Dynamics and Combustion in Piston Engines  
*P. Pinchon* .......................................................................................... 31

Role of Flows and Turbulent Mixing in Combustion and Pollutant Formation in Diesel Engines  
*M. Ikegami* .......................................................................................... 49

### Spark Ignition Engine Combustion

**SESSION SI–1**

Prediction of Unburned Gas Temperature in Multidimensional Engine Combustion Simulation  
*A.D. Gosman, C.J. Marooney and H.G. Weller* ...................................... 59

Numerical Calculation of Turbulent Flow and Combustion in an Otto Engine Using the Eddy Dissipation Concept  
*B. Grimsmo and B. F. Magnussen* ...................................................... 65

*K. Naitoh and K. Kuwahara* ................................................................. 75

Continued Development of an SI Engine Model Using Fractal Geometry  
*Y.W. Chin, R.D. Matthews, S.P. Nichols and T.M. Kiehne* ...................... 81

A Numerical Study on the Transition of a Laminar Flame to a Turbulent Flame in a Divided Combustion Chamber  
*I.S. Jeung, K.K. Cho and S.W. Choi* ..................................................... 87

**SESSION SI–2**

A Detailed Low-Temperature Reaction Mechanism of n-Heptane Auto-Ignition  
*C. Chevalier, P. Louessard, U.C. Müller and J. Warnatz* ........................ 93
Calculations of Ignition Lags for Methane-Air Mixtures by Chemical Kinetics
N. Miyamoto, H. Ogawa and K. Doi ................................................................. 99

Model Predictions and Experimental Evidence of Detonation Characteristics in a Spark Ignition I.C.E.
M. Belli, S. Bova and P. Fragiacomo ................................................................. 105

Effect of Mixture Dilution or EGR on Low-Temperature Autoignition under Piston Compression
Y. Ohta, M. Furutani, S. Kadowaki, K. Terada and H. Takahashi ....................... 111

SESSION SI–3
Realization of a Rapid Compression Machine (Application to the Determination of Gaseous Premixtures Autoignition)
F. Fisson and T. Kageyama .................................................................................. 117

Knocking Phenomena in Hydrogen-Enriched Gasoline Engines – A Theoretical Study
E. Sher and S. Refael ............................................................................................ 123

Observation and Modeling of the Structure of Premixed Turbulent Propagating Flames
H. Kido, S.W. Huang and K. Nakashima ............................................................. 129

Turbulent Premixed Flames in Combustion Chamber under Engine-like Conditions
E. Tomita and Y. Hamamoto .................................................................................. 135

SESSION SI–4
Influence of Hydrodynamic Conditions on the Development of a Premixed Flame in a Closed Vessel
A. Floch, T. Kageyama and A. Pocheau ............................................................... 141

Flame and Wall Temperature Visualization on Spark-Ignited Ultra-Low Combustion Engine
Y. Goto .................................................................................................................. 147

Analysis of Ignition Mechanism of Combustible Mixtures by Short Duration Sparks
K. Ishii, M. Kono, K. Niu, T. Tsukamoto and Y. Ujiie ........................................... 153

Enhancing Ignition by Conditioning the Fast-Spark Induced Flow Field
A. Borghese, M. Diana, V. Moccia and R. Tamai .................................................. 159

SESSION SI–5
Numerical Simulation on the Growth of Hot Gas Spots Produced by a Spark Discharge
K. Momose, G. Komatsu, Y. Hosokawa, A. Ueda and T. Iwata .......................... 167

Flame Kernel Formation in a Spark-Ignition Engine
R. Herweg and G. F. W. Ziegler ............................................................................ 173
Studies of Fuel Droplets Behavior and Flame Propagation in Combustion Chamber on S.I. Engine Using Laser 2-D Visualization
  M. Tabata, A. Nagao and Y. Iida ........................................ 179

I.C. Engine Having Performance Parameters Preferential for Automotive Operating Conditions
  R. Pavletić, V. V. Sinyavskiy, F. Bizjan and D. Leshkovšek .......... 185

Fuel Sprays

SESSION FS–1

Characteristics of a Diesel Spray Impinging on a Flat Wall
  H. Fujimoto, M. Nagae, A. Hashimoto, N. Katsura, M. Saito and
  J. Senda ................................................................. 193

A Study on the Structure of Diesel Spray (2-D Visualization of the Non-Evaporating Spray)
  A. Azetsu, S. Dodo, T. Someya and C. Oikawa .......................... 199

Computed Tomographic Study on Internal Structure of a Diesel Spray Impinging on a Flat Wall
  H. Hiroyasu, K. Nishida, J. C. Min, M. Arai and H. Yoshida ........... 205

The Structure of Propagating Spray Flames
  X. M. Yang, T. Tsuruda and T. Hirano .................................. 209

Digital Procedures for Pattern Recognition of Diesel Spray Characteristics
  A. Cavaliere, L. Tognotti, S. Pintus, R. Ragucci and S. Zanelli ....... 217

SESSION FS–2

Ambient Gas Density Effects on Droplet Diameter and Velocity in a Transient Diesel Fuel Spray
  J. Y. Koo and J. K. Martin ............................................. 225

LDA Analysis of Diesel Spray and Entrainment Air Flow
  T. Obokata, T. Hashimoto and H. Takahashi ............................ 231

An Ad-Hoc Procedure to Alleviate False Diffusion Effects in Computer Codes Using Discrete Droplet Models
  A. P. Watkins and H. Khaleghi ........................................ 237

A New Model for Diesel Spray Impaction on Walls and Comparison with Experiment
  A. P. Watkins and D. M. Wang .......................................... 243

SESSION FS–3

Numerical Simulation of Flow and Combustion of Transient Sprays
  T. Takagi, C. Y. Fang, T. Kamimoto and T. Okamoto .................... 249

Comparison of Models and Experiments for Diesel Fuel Sprays
  L. Allocca, U. Amato, C. Bertoli and F. E. Corcione .................. 255
Multi-Dimensional Modelling of Diesel Sprays Using a Fast Non-Iterative Implicit Solution Scheme — Recent Advances
   \textit{A.P. Watkins and H. Khaleghi} ................................................................. 263

A Study of Spray Direction against Swirl in D.I. Engines
   \textit{S. Kono, H. Kudo and T. Terashita} ......................................................... 269

Study of Atomization and Micro-Explosion of Water-in-Diesel Fuel Emulsion Droplets in Spray within a High Temperature, High Pressure Bomb
   \textit{H-Z. Sheng, Z-P. Zhang and C-K. Wu} ....................................................... 275

\textbf{SESSION FS–4}

Fuel Spray Motion in Side Injection Combustion System for Diesel Engines
   \textit{H. Nakagawa, Y. Oda, S. Kato, M. Nakashima and M. Tateishi} .................. 281

Experimental and Numerical Study of the Diesel Fuel Spray from Pintle Nozzles
   \textit{Y.S. Zhang and S.X. Shi} ................................................................. 287

Measurement of Diameter and Volume Density Distribution in Diesel Fuel Sprays by Means of Holographic Technique
   \textit{X.Y. Gao and G.D. Hu} ................................................................. 293

An Experimental Study and Computer Analysis on Oblique Impingement of Diesel Type Spray upon a Plane Wall
   \textit{B.X. Chen and R.S. Wang} ................................................................. 299

\textit{WRITTEN ONLY}

The Laser Holographic Study on Fuel Atomization of Diesel Spray
   \textit{Z. Huang, L.F. Zhang and B.Z. Li} ....................................................... 303

\textbf{Heat Transfer}

\textbf{SESSION HT}

Detailed Analysis of Heat Flow Pattern in a Piston
   \textit{T. Morel, R. Keribar and S.T. Harman} .................................................. 309

The Potential of Heat Transfer Control on Insulated Combustion Chamber Walls
   \textit{K. Nishiwaki and T. Hagiwara} .......................................................... 315

Modeling of Heat Transfer during Combustion: A Quasi-Dimensional Approach with Emphasis on Large Low-Speed Diesel Engines
   \textit{K. Boulouchos and R. Isch} ............................................................... 321

Heat Transfer Analysis through Heterodyne Holographic Interferometry
   \textit{B. Ineichen and K. Klukowski} .......................................................... 329
Investigation on Compression Temperature Field in a Diesel Combustion Chamber

**WRITTEN ONLY**

The Experimental Study on Transient Surface Temperature of the Piston Coated with Ceramics
W.X. Xu, L.F. Zhang and X.Zao ................................................................. 341

**Optical Diagnostics**

**SESSION OD-1**

An Optical Research Engine for the Study of Two-Stroke Cycle In-Cylinder Phenomena
R.M. Green and B.J. Cousyn ................................................................. 347

Measurement of the Temperature and Concentration Fields in Fuel Film Evaporation Process
Z.B. Liu, J.W. Zhou and Y.S. Li .............................................................. 353

Study on Optical Combustion Sensor for Spark Ignition Engine
Y. Ohyama, H. Kuroiwa and M. Ohsuga .................................................. 359

Measurement of Vehicle Emissions with Fourier Transform Infrared (FTIR) Method
S. Kawarabayashi, Y. Yamagishi, H. Kachi and S. Kobayashi ...................... 365

**SESSION OD-2**

Laser Assisted Diagnostics for Characterization of Condensed Phases during Diesel Combustion Processes
R. Ragucci, A. Cavaliere and A. D'Alessio .............................................. 371

Rayleigh Scattering Measurements of Fuel Vapor Concentration Fluctuation in a Motored Spark Ignition Engine
F.Q. Zhao, T. Kadota and T. Takemoto ..................................................... 377

Application Examples of a Rapid and Simplified Coherent Anti-Stokes Raman Scattering (CARS) Technique
S. Fujii and M. Gomi ........................................................ ....................... 383

Simultaneous Temperature and CO\textsubscript{2} Concentration Measurements by CARS in an Engine
F. Grisch and M.J. Cottereau ................................................................. 389

Unburnt Gas Temperature Measurements Using Single Shot CARS in a Spark Ignition Engine
T. Nakada, T. Itoh and Y. Takagi ............................................................. 393
Fluid Flows

**SESSION FF–1**

*R. R. Maly, G. Eberspach and W. Pfister* ........................................... 399

The Effect of Swirl on the Decay and Generation of In-Cylinder Turbulence during the Compression Stroke  
*Y. Moriyoshi, H. Ohtani, M. Yagita and T. Kamimoto* .......................... 405

Turbulence Models Validation by LDA in an Internal Combustion Engine  
*U. Amato, C. Bertoli, F. E. Corcione, F. Petrillo and G. Valentino* .............. 411

**SESSION FF–2**

Instability of Steady Valve Flow in a Swirl Port  
*S. Tanabe, H. Iwata and Y. Kashiwada* .................................................. 419

Three Dimensional Computation of In-Cylinder Flow with Intake Port in DI Diesel Engine  
*Y. Takenaka, M. Yabe, Y. Aoyagi and T. Shiozaki* ................................. 425

A New Unstructured-Mesh Method for Flow Prediction in Internal Combustion Engines  
*B. Adamson, A. D. Gosman, C. J. Marooney, B. Nasser and T. Theodoropoulos* 431

**SESSION FF–3**

The Effects of “Inclination Angle of Swirl Axis” on Turbulence Characteristics in a 4-Valve Lean-Burn Engine with SCV  
*S. Furuno, S. Iguchi, K. Oishi and T. Inoue* ........................................... 437

Characteristics of Turbulence Generated by Tumble and Its Effect on Combustion  
*H. Ando, D. Sanbayashi, K. Kuwahara and K. Iwachido* .......................... 443

Further Investigation into the Statistical Properties of Reciprocating Engine Turbulence  
*A. E. Catania, C. Dongiovanni and A. Mittica* .................................. 449

Gas Velocity Stability Measurements in the Initiation Region of an SI Engine  
*M. J. Bennett, N. S. Girgis and M. Nakayama* .................................. 457

Multidimensional Calculation of Combustion in a Loop-Scavenged Two-Stroke Cycle Engine  
*B. Ahmadi-Befrui and H. Kratochwill* ........................................... 465

**SESSION FF–4**

Three Dimensional Modeling of Flow and Mixture Preparation in a Two Stroke Engine  
*A. Fabre and C. Ferreira* ................................................................. 475
Simultaneous Measurement of Velocity and Pressure in a Two Stroke Engine
Y. Ikeda, K.Y. Lee, T. Nakajima, R. Matsumoto and T. Ohhira .......................... 481

Analysis of the Effects of In-Cylinder Flows during Intake Stroke on the Flow Characteristics near Compression TDC in Four-Stroke Cycle Engines
T. Wakisaka, Y. Shimamoto, Y. Isshiki, N. Sumi, K. Tamura and R.M. Modien ........................................... 487

SESSION FF–5

Investigation of Swirl Generating Characteristics of Helical Ports by Numerical Simulation
Y. Shimamoto, Y. Isshiki, T. Wakisaka and T. Fujimoto ........................................ 493

An Assessment of Discretisation Schemes and Turbulence Models for In-Cylinder Flows
A. P. Watkins, P. Kanellakopoulos and C. J. Lea ........................................... 499

The Effect of Inlet Port Geometry on In-Cylinder Flow Structure
V. P. Pavkin-Zylenkov, E. G. Ponomarev, O. B. Ryabikov and V. B. Samofalov ... 505

Comparison of Simulation and Experimental Results in Cylinder Air Motion
T. Adachi and C. M. Shu ........................................................................ 511

Diesel Combustion

SESSION DC–1

Investigation on Deposit Formation during Low Load Operation of High Supercharged Diesel Engines
P. Eilts .................................................................................. 517

2-D Soot Imaging in a Direct Injection Diesel Engine Using Laser-Induced Incandescence
A. O. zur Loye, D. L. Siebers and J. E. Dec ........................................... 523

Rating of DI Diesel Combustion System Configuration by Mixing Indexes
P. Belardini, C. Bertoli, F. E. Corcione, N. Del Giacomo and G. Police ............. 529

Residual Fuel Sprays – Evaporation, Dispersion and Combustion Characteristics
Y. Wakuri, K. Takasaki, K. Maeda, Y. X. Yang, H. Okubo and S. Hino ............. 539

SESSION DC–2

The Effect of Swirl on the Combustion Process on a D.I. Diesel Engine
F. Payri, J. V. Benajes and M. Lapuerta .................................................. 545

Interaction between Spray Impingement and Swirl Movement and Its Influence on Combustion in a DI Diesel Engine
Y. X. Yang, Y. Wakuri and K. Takasaki .................................................. 551
New Results of Research into Mixture Formation in the Direct Injection Diesel Engine

K. Binder and V. Pfeffer ................................................................. 557

SESSION DC-3

Experimental Study on Fuel Air Mixture Formation and Ignition Process in Diesel Combustion
T. Ishiyama, K. Miwa and A. Kanno ........................................... 565

Theoretical and Experimental Study on Combustion Similarity for Different Size Diesel Engines
T. Chikahisa and T. Murayama ..................................................... 571

Progress in the Development of a Detailed Model for Diesel Combustion
R. J. R. Johns ........................................................................ 577

SESSION DC-4

Mathematical Modelling and Computer Simulation of Medium Size Diesel Engine Running on Varying Quality Fuels
R. Ziarati and A. Veshagh ............................................................. 587

Comparison of 3-D Modeling of D.I. Diesel Engine Combustion with Gas Sampling Experiment
K. Nishida, H. Hiroyasu, M. Arai and S. Yoshikawa .................... 595

Modelling of Droplet-Gas Interaction in a Spray Combustion Engine

A Study on Combustion of Direct Injection Diesel Engine with 150MPa Injection Pressure
S. Shundoh, T. Kakegawa, K. Tsujimura and S. Kobayashi ............. 607

Characterization of Soot Clouds and Turbulent Mixing in Diesel Flames by Image Analysis
M. Shioji, K. Yamane, N. Sakakibara and M. Ikegami ...................... 613

SESSION DC-5

Synergistic Diagnosis on Combustion
T. Maeda, S. Izumi, M. Ishida, H. Suetsugu and Y. Yoshimura ........ 619

Surrounding Gas Condition Effects on NOx and Particulate
N. Iida and J. Watanabe ............................................................... 625

Pollutant Formation

SESSION PF

Particulate Formation in Compression-Ignited Fuel-Rich Mixtures
T. Ogawa, Y. Daisho, O. Kurata and T. Saito ............................... 633
In-Cylinder Study of Soot and Polycyclic Aromatic Hydrocarbon Formation during the Combustion Cycle of a D.I. Diesel Engine Burning Tetradecane
   A.Ciajolo, A.D’Anna, R.Barbella, C.Bertoli and M.V.Prati .......... 639

Reduction of NO in Reheat Combustor of Compound Engine
   S.Goto, H.Furutani and K.Koizumi ........................................ 645

A New Technique to Study the Response of Catalysts to Transient Conditions
   N.Collings and T.Hands ....................................................... 651

Index of Authors ........................................................................ 655
