TABLE OF CONTENTS

Recent Developments in Applying Neural Nets to Equalization and Interference Rejection ................................................................. 1-1
  I. Howitt, V. Vemuri, T. C. Hsia, University of California, and J. H. Reed, Virginia Tech

Importance Sampling Methodologies for Simulation of Wireless Communication Links ................................................................. 2-1
  Wael A. Al-Qaq, Michael Devetsikiotis and J. Keith Townsend, North Carolina State University

A Narrowband PCS Advanced Messaging System ......................................................... 3-1
  Walt Roehr, Telecommunication Networks Consulting, Rade Petrovic, University of Mississippi, and Dennis Cameron, MTEL Technologies

Multicarrier Permutation Modulation for Narrowband PCS ......................................... 4-1
  Rade Petrovic, University of Mississippi, Walt Roehr, Telecommunication Networks Consulting, and Dennis Cameron, MTEL Technologies

A New Equalizer for Wideband OFDM over a Frequency-Selective Fading Channel ...... 5-1
  Michel Fattouche, The University of Calgary, and Hatim Zaghloul, Wi-LAN Inc.

Blind Adaptive Antenna Arrays in Cellular Communications for Increased Capacity ...... 6-1
  Stephan V. Schell, The Pennsylvania State University, William A. Gardner and Peter A. Murphy, University of California

Network Connection & Traffic Interchange Agreements—A Wireless Personal Communications Opportunity .............................................. 7-1
  James D. Proffitt, PacTel Corporation

Noncoherent Spread Spectrum Receiver with Joint Detection and Synchronization Using Modified Matched FIR Filters ................................ 8-1
  P. G. Schelbert, W. J. Burmeister, and M. A. Belkerdid, University of Central Florida

Direct Sequence Spread Spectrum Interference Rejection Using Vector Space Projection Techniques ...................................................... 9-1
  John F. Doherty, Iowa State University

A Low-Power Handheld Frequency-Hopped Spread Spectrum Transceiver Hardware Architecture ............................................................... 10-1
  Jonathan Min, Ahmadreza Rofougaran, Victor Lin, Michael Jensen, Henry Samueili, Asad Abidi, Gregory Pottie, and Yahya Rahmat-Samii, University of California

Markov Models for Burst Errors in Radio Communications Channels ....................... 11-1
  S. Srinivas and K. S. Shanmugan, University of Kansas

Performance of Direct-Sequence Code-Division Multiple-Access Using Trellis-Coded Orthogonal Signalling ............................................. 12-1
  Scott L. Miller, University of Florida

Whither Personal Communications ........................................................................ 13-1
  Larry U. Dworkin and Louis L. Taylor, The MITRE Corporation

Video Compression for Wireless Communications ......................................................... 14-1
  Teresa H. Meng, Ely K. Tsern, Andy C. Hung, Sheilla S. Hennami, and Benjamin M. Gordon, Stanford University

Solving the Near-Far Problem: Exploitation of Spatial and Spectral Diversity in Wireless Personal Communication Networks ..................... 15-1
  Brian G. Agee, Radix Technologies, Inc.
Mobile Communications: An IC Designers Perspective .................................................. 16-1
Michael Schwartz, National Semiconductor

Measured 900 MHz Complex Impulse Responses in Mountainous Terrain: Relationship to
Topographical Map Data .................................................................................................. 17-1
R. L. Kirlin, W. Du, Y. Cui, G. Robertson, Y. Zhang, P. F. Driessen, University of Victoria

An Overview of Broadband CDMA ............................................................................. 18-1
G. R. Lomp and D. L. Schilling, InterDigital Communications Corp., and L. B. Milstein, University
of California

Application of Variable-Rate Convolutional Code for Mobile Communications .......... 19-1
Young-Ok Park, ETRI

Reservation Versus Demand-assignment Multiplex Strategies for Packet Voice Communication
Systems ......................................................................................................................... 20-1
J. L. Sobrinho, J. M. Brázio, CAPS
