CONFERENCE PROCEEDINGS

9th Annual Review of Progress in

APPLIED

COMPUTATIONAL

ELECTROMAGNETICS

at the

Naval Postgraduate School

Monterey, CA

March 22-26, 1993

SYMPOSIUM PROGRAM COMMITTEE CHAIRMAN

Perry Wheless

Sponsored by

The Applied Computational Electromagnetics Society

and CEFC, DOD/USA CECOM, USAIESA, NCCOSC NRaD.NPS, AND DOE/LLNL

THE NAVAL POSTGRADUATE SCHOOL
Contents

Table of Contents

1994 Call for Papers

1993 Symposium Program Committee

Conference Chairman's Summary

ACES President's Statement

ACES93 Short Courses

Session 1: Canonical Problems for Software Validation
   Chair: Dr. Andrew Peterson, Co-Chair: Capt. Dennis Andersh

RCS of High Permittivity Cubes by FDTD and by Measurement
   C.W. Trueman, S.J. Kubina, R.J. Luebbers, S.R. Mishra,
   and C. Larose

Asymptotic Prediction Validation Using Measured Data
   B.B. Halama, D.J. Andersh, and A.J. Terzouli, Jr.

TLM Computation of an Iris—Coupled Waveguide Cavity — A Canonical
   Problem
   Qi Zhang and W.J.R. Hoefer

A Technique for Determining Non—Integer Eigenvalues for Canonical Analysis
   of Boundary Value Problems
   D. Reuster and M. Kaye

Evaluation of Method of Moments Codes: University of Houston JUNCTION
   and Numerical Electromagnetic Code, Version 4
   C.A. Deneris, J.C. Logan, and J.W. Rockway

NEC2, NEC3, and NEC4 on a Convex Mini—Supercomputer
   Lance Koyama

Session 2: Canonical Problems Workshop (no published papers)
   Moderators: Dr. Andrew Peterson and Capt. Dennis Andersh

Session 3: Moment Method Theory and Applications
   Chair: Dr. Paul M. Goggans

Development of a Bandlimited Basis Set for Thin Wire Method of Moments
   Scattering Problems
   G.E. Mortensen and C.C. Cha

A Moment Method Formulation for Electromagnetic Radiation and Scattering
   from Composite Bodies of Revolution
   Pierre Steyn and David B. Davidson

Scattering and Radiation from Partially Coated 3—D Triangular
   Patched Bodies
   J.M. Putnam

Presentation Only
Session 3, continued

Calculation of Transient Scattering from Two-Dimensional Objects using a Frequency Domain Method of Moments Approach
Paul M. Goggans 72

RCS of Structures with Apertures and Slots
S. Kashyap, A. Louie, S. Mishra, and C. Larose 81

Session 4: GTD/UTD/PO Analysis
Chair: Dr. A.K. (Tony) Brown, Co-Chair: Dr. Shian U. Hwu

Overview of Analytic Techniques used in OSU Reflector Antenna Code
Teh-Hong Lee and Roger C. Rudduck 90

Space Station Freedom (SSF) Antenna Pattern Predictions Using Geometrical Theory of Diffraction
Shian U. Hwu, Jon S. Fournet, Robert J. Panneton, and G. Dickey Arndt 97

An ‘Object-Oriented’ Approach to GTD/UTD Modeling
Edgar L. Coffey (Late Submission) 901

The Multi-Point GTD and Extended Aperture Integration Techniques for Analysis of Reflector Antenna
Roger C. Rudduck, Yueh-Chi Chang, and Teh-Hong Lee 105

Session 5: Computational Electromagnetics — The Next Generation
Chair: Kenneth R. Siarkiewicz

The Electromagnetic Modeling and Simulation Environment for Systems (EMSES)
Kenneth R. Siarkiewicz 114

A Proposed Approach for Developing Next-Generation Computational Electromagnetics Software
E.K. Miller, R.P. Kruger, and Steve Moraites 122

Hybrid Approach for Large 3-D Platforms
L.N. Medgyesi-Mitschang, J.M. Putnam, and Dau-Sing Wang Presentation Only

Session 6: Transients
Chair: Dr. Paul M. Goggans

Transient Internal and Scattered Fields of a Sphere Illuminated with a Pulsed Gaussian Beam
Elsayed Esam M. Khaled, Dipakbin Q. Chowdhury, Steven C. Hill, and Peter W. Barber 140
Session 7: High-Frequency Techniques and Asymptotic Solutions
Chair: Dr. A.K. (Tony) Brown, Co-Chair: Dr. Shian U. Hwu

ISAR Image Formation Using Bistatic Data from ‘XPATCH’
Rajan Bhalla and Hao Ling 150

Time Domain Smyth–Kirchhoff Approximation to Aperture Coupling
K.S. Kunz and S.A. Blocher 158

A Hybrid Approach to Trailing Edges and Trailing Ends
David Ingham 166

High Frequency Approximations to the Physical Optics Scattering Integral for Curved Edged Surfaces
William B. Gordon 173

Session 8: Visualization and I/O Issues
Chair: Dr. Ed Miller Co-Chair: Dr. Stan Kubina

Numerical Imaging of Finite Element Frequency Domain Solutions
R. Craig Baucke and John D’Angelo 182

Visualization of Electromagnetic Fields Using the Finite Difference Time Domain Method
John H. Beggs, Deirdre A. Ryan, and Raymond J. Luebbers 189

Creation, Visualization and Analysis — The Dynamics of Complex Models
S.J. Kubina, C.W. Truman, D. Gaudine and A. Ramos 195

Scientific Visualization of 3D Radar Cross Section Data
Thomas G. Wojcynski, Andrew J. Terzouli, Jr., and Martin K. Stutz 213

Rapid Visual Computation of Physical Optics Backscattering (Invited Paper)
R.A. Shepherd, T.D. Olson, and C.S. Liang 213

Presentation Only

EM Visualization on a SGI 4D Workstation
L.C. Russell and J.W. Rockway 221

WinGAUGE Graphical Aids for the Users of GEMACS for the Windows Environment
Jeffrey A. Evans 228

NECDRAW for 3-D Images of NEC Wire Grid Models
Ron Bardarson and Robert Just 235

The Electromagnetic Modeler’s Workbench for GEMACS
Edgar L. Coffey and Robert Fisher 243

(Late Submission) 888

Graphical Shell for Numerical Electromagnetics Code
M.J. Packer, R.A. Powers, and A.P. Tsitsopoulos 243

Session 9: Microwave Circuits
Chair: Dr. Peter Russer Co-Chair: Professor Linda P.B. Katehi

Field Matching Analysis of Complex Waveguides with Anisotropic Materials
M. Okoniewski 252

Advance in Analyzing Passive Planar Radiating Structures with Method of Moments Matrices
Sebastian Sattler and Peter Russer 260

S–Parameter Modeling of Planar Transmission Line Discontinuities and MMIC Module Interconnections
Hang Jin, Rüdiger Vahldieck and Peter Russer 266
Session 9, continued

Theoretical Analysis of Microshield Transmission Lines With Dual—Plane Discontinuities (Invited Paper)
T.M. Weller and P.B. Katehi

Symmetry Analysis of Large Two—Dimensional Clusters of Coupled Cavity Resonators
Ross A. Speciale

Analysis of a Millimeter—wave Filter using Transmission Line Matrix and Mode Matching Methods and Comparison with the Measurements (Invited Paper)
W. Menzel, F. Alessandri, M. Mongiardo, R. Sorrentino, C. Eswarappa, P.P.M. So, and W.J.R. Hoefer

Coupling—of—Modes Analysis of SAW—Multistrip Coupler
R. Weigel, G. Scholl, and P. Russer

Description of Conductor—Loss Effects in Planar Transmission Lines
Wolfgang Heinrich

Dynamic Electrical Modeling of Gap Discontinuities on Lossy Monolithic Microstrip Line
Anne Vilcot and Smail Tedjini

Session 10: Time—Domain Techniques I (featuring FDTD)
Chair: Dr. Ray Luebbers, Co—Chair: Dr. Jiayuan Fang

Absorbing Boundary Treatments in the Simulation of Wave Propagation in Microwave Integrated—Circuits
Jiayuan Fang

A Hybrid Ray/FDTD Method for Computing Electromagnetic Scattering from an Engine Cavity with a Complex Termination
R. Lee and T.T. Chia

FDTD Modeling of the Resonance Characteristics of Realistic Enclosures
Kent Chamberlin, Lauchlan Gordon, and Bruce Archambeault

A Method for Reducing Run—Times of Out—of—Core FDTD Problems
J. Raley Marek and Jeff MacGillivray

Investigation of the Use of Chimera for Solving Maxwell’s Equations for Electromagnetic Propagation in the Time Domain
M.D. White and J.J. Chattot

Radar—Cross—Section and Aerodynamic—Force Calculations using Finite—Difference Methods
H. Vinh, C.P. van Dam, and H.A. Dwyer

Session 11: Remote Sensing and Monte Carlo Techniques
Chair: Professor Leung Tsang, Co—Chair: Dr. Chi Chan

Monte Carlo PO Simulation of Scattering from Rough Surfaces Near Grazing Incidence
H. Bender, R. Suchar, and P. Russer

Polarimetric Thermal Emission from Rough Ocean Surfaces: A Numerical Study (Invited Paper)

A Banded Matrix Iterative Approach to Monte Carlo Simulations of Large—Scale Random Rough Surface Scattering: TE Case (Invited Paper)
Leung Tsang, Chi H. Chan and Haresh Sangani
Session 11, continued

A Banded Matrix Iterative Approach to Monte Carlo Simulations of Large—Scale Random Rough Surface Scattering: Penetrable Case (Invited Paper)

C.H. Chan, L. Li and L. Tsang

Session 12: Bioelectromagnetic Computations

Chair: Dr. Imre Gyuk

Bio—electromagnetic Computation in the Low Frequency Range:

An Introduction (Invited Paper)

Imre Gyuk

Calculation of Electric and Magnetic Fields near Ground Level in 187KV AC Substation (Invited Paper)

K. Isaka, N. Hayashi, and Y. Yokoi

Numerical Methods for Dosimetric Calculations: ELF to Microwave Frequencies (Invited Paper)

Om P. Gandhi (Abstract Only) 411

Current Distribution Tomography for Determination of Internal Current Density Distributions (Invited Paper)

Paul C. Gailey (Late Submission) 923

A Matrix Formulation of Dielectric Imaging, Dosimetry and Computation of Vector Electromagnetic Fields (Invited Paper)

Wendy W. Guo and Theodore C. Guo 413

Explanation of Biological Effects of Low—intensity Electric, Magnetic and Electromagnetic Fields by Nonlinear Dynamics (Invited Paper)

F. Kaiser 424

Calculation of Absorbed Power Density in the Human Arm Due to Induced Currents at 1—30 MHz

P.R. Wainwright 432

Session 13: Time—Domain Techniques II (featuring TLM)

Chair: Dr. Wolfgang J.R. Hoefer, Co—Chair: Dr. Fred German

A Comparison of Currents Induced on Scattering Bodies Using the Transmission Line Modeling (TLM) Method and the Method of Moments (MOM)

Griffin K. Gothard and Sadasiva M. Rao 442

Transmission Line Matrix (TLM) Modeling of a Stepped—Septum Square—Wavguide Polarizer

Lloyd S. Riggs, G.K. Gothard, Fred J. German, and Chuck Chandler 450

Discrete Time—Domain Greens Functions for Three—Dimensional TLM Modelling of the Radiating Boundary Conditions (Invited Paper)

M. Krumpholz and P. Russer 458

Transmission Line Matrix Method on Massively Parallel Processor Computers

Poman P.M. So, Channabasappa Eswarappa, and Wolfgang J.R. Hoefer 467

Fast Frequency—Domain TLM Analysis of 3D Circuit Discontinuities (Invited Paper)

Jifu Huang, Ruediger Vahldieck and Hang Jin 475

Infinitesimally Adjustable Boundaries in Symmetrical Condensed Node TLM Simulations (Invited Paper)

Fred J. German 482
Session 14: General Purpose Code Applications

Chair: Dr. Jim Breakall, Co-Chair: George Hagn

Rhombic Illuminator Performance at High Frequency
J. Patrick Donohoe and Clayborne D. Taylor 492

Recent Enhancements to GEMACS 5.2
Edgar L. Coffey (Late Submission) 894

High Resolution Spectral Analysis of HF Coupling Modes on the EC–130 Aircraft
Q.C. Luu, S.J. Kubina, C.W. Trueman, and D. De Carlo 500

Helicopter Antenna Pattern Analysis Using NEC–BSC

Airborne TX/RX Antenna Pair Location Investigation — Experimental and NEC–BSC Results
Scott Townley 521

The Analysis of Asymmetric Log–Periodic Dipole Antennas Using NEC
Jacqueline A. Schaefer 529

Session 15: CAEME

Chair: Dr. Magdy Iskander

Interactive Video Lessons for Electromagnetic Education
Magdy F. Iskander and Thomas Reed 538

A Generic Finite Element Model for Plane Problems
Kyran D. Mish and LaDawn Haws 549

Analysis of Electromagnetic Fields in Electrical Machines from Experimental Data for Educational Purposes
Osama A. Mohammed, Howard Gordon, and Abd A. Arkadan 556

Learning About EM Theory and EM Modeling by Analyzing Printed Circuit Boards in an Enclosure
T.H. Hubing and M.W. Ali 564

EMAG — Electromagnetic Software Development at Rose–Hulman Institute of Technology (Invited Paper)
J. Lebaric and Roger P. Manke, Jr. (Late Submission) 915

Relativistic Foundation of Electric Current — A Model for Transmission Lines (Invited Paper)
Zvonko Fazarinc 569

Making Computer Tutorials in Electrodynamics With The CAEME Software
Rodney Cole, Curtis Brune, and Scott Tooker (Late Submission) 908

Reflector Antenna Analysis Software: An Educational Approach
B. Houshmand and Y. Rahmat–Samii 577

Computer–Graphics–Aided Teaching and Learning Tool for Antennas
Hamid Moradi, Swapan Chakrabarti, and Prasad Gogineni 586

Introducing Spherical Harmonics to Undergraduates
Glen Erickson Presentation Only

Interactive Analysis of Antenna Arrays with a Personal Computer
Atef Z. Elsherbeni and Patrick H. Ginn 594
Session 16: RCS

Chair: Dr. Shian U. Hwu, Co-Chair: Dr. A.K. (Tony) Brown

Xpatch: a High Frequency RCS Code
S.W. Lee and Dennis J. Andersh
Presentation Only
Computing the Time Domain EM Scattering from Large Open—Ended Cavities Using the SBR and GRE Ray Shooting Methods
Robert J. Burkholder and Prabhakar H. Pathak
Target Facetization Level and the Effect on Xpatch Predictions
E.M. Miller, D.J. Andersh, and A.J. Terzouli, Jr.

Session 17: Multipole Techniques

Chair: Dr. Richard K. Gordon

Comparison of Multipole and Multifilament Techniques
D. Reuster and M. Kaye
New Thin Wire Expansions for Long Wires in the MMP—Code
Pascal Leuchtmann and Marcel Gnos

Session 18: Numerical Modelling in Complex Media

Chair: Dr. Weng Chew

Toward an FDTD Analysis of the Standard Approximations for Propagation in Randomly Structured Ionization
L.J. Nickisch and P.M. Franke
A Ray—Based Approach to Scattering from Inhomogeneous Dielectric Objects
Hao Ling and Hyeongdong Kim
Applications of Discrete Methods to Optical Pulse Propagation in Linear and Nonlinear Materials
R.W. Ziolkowski and J.B. Judkins
Presentation Only
Hierarchical Basis Functions for 3D Finite Element Methods
John R. Lovell
NEPAL — The Use of Huygens’ Equivalence Principle for Solving the Volume Integral Equation of Scattering
Weng Cho Chew and Cai—Cheng Lu
A CG—FFHT Method for the Solution of EM Field in Axisymmetric Inhomogeneous Media
Qing—Huo Liu and Weng Cho Chew
Scattering Computations for Multi—Region Cylindrical Objects
Michael A. Morgan

Session 19: Low—Frequency Techniques and Applications

Chair: Dr. Osama Mohammed, Co-Chair: Dr. Abd A. Arkadan

Computation of Electric Machines Parameters in the ABC Frame of Reference Using Finite Element Analysis
A.A. Arkadan and R.H. VanderHeiden
An Efficient 3—D Finite Element Mesh Generator for Electromagnetic Analysis in Complex Volumes
Fuat G. Uler and Osama A. Mohammed
Session 19, continued

Modern Numerical Techniques for High Precision MRI Magnet Design  
(Served on Paper)  
Sergio Pissanetzky  

An Artificial Neural Network Environment for the Optimal Design of  
Geometric Boundaries in Electromagnetic Devices  
Osama A. Mohammed, Dong C. Park, Riaz Merchant,  
and Fuat Ulger  

Sensitivity Analysis of the Integrodifferential Finite Element —  
Green’s Function Method  
Qiushi Chen, A. Konrad and P.P. Biringer  

Session 20: EMC/EMI  
Chair: Dr. Todd Hubing, Co-Chair: Dr. Reinaldo Perez  

EMI Analysis of Transient Events via Method of Moments on the  
Titan IV/Centaur Rocket Main Batteries  
Reinaldo Perez  

Detailed Analysis of a Realistic Canonical Structure in Electromagnetic Radiation  
Problems  
Shahrokh Daijavad and Barry J. Rubin  

EMI Prediction Using Wire Mesh Boxes in NEC  
Bruce Archambeaut and Rich Mellitz  

The Application of Different Meshing Techniques to EMC Problems  
J.L. Herring and C. Christopoulos  

Optimization of FDTD for EMI Modeling Applications  
Bruce Archambeaut and Louise Lemaire  

Applications of MiniNEC to EMI Modeling  
Colin E. Brench  

Nonlinear Effects Errors Encountered in Performing Interference  
Analysis Using an RF Circuit Analysis Code  
Frank E. Walker and Sperry H. Goodman  

Session 21: Antennas  
Chair: Dr. Roger Radcliff, Co-Chair: Dr. Al Christman  

Computer Model for Axially Symmetric Dielectric Radomes in the Near Field  
of a Circular Aperture  
D.C. Jenn, R.M. Francis, and K.A. Klopp  

An Exact Expression for the Vector Potential of a Uniform Current  
Cylindrical Antenna  
D.H. Werner and P.L. Werner  

A Simplified Approach for Modeling a Log Periodic Antenna  
Steven C. Merrill and Malcolm J. Packer  

Phased Array Radiating Element Design Software  
H.K. Schuman  

Spectral-Domain Analysis of Patch Radiators on Lossy Ferrite Substrates  
Zhenglian Cai and Jens Bornemann
Session 22: Finite Element Method and Applications at High Frequencies
Chair: Dr. Richard K. Gordon, Co-Chair: Dr. Jin-Fa Lee

ABC Finite Elements for Open Boundary Electromagnetic Problems of Frequencies from DC to GHz
John R. Brauer, Brian S. Brown and Mark M. Jenich 830

Application of Explicit Finite Elements to Maxwell’s Equations
M. Hafez and P. English 838

Microstrip Discontinuity Analysis by Time Domain Finite Elements

On the Optimization of a Finite Element Code for 3D Scattering Computation
A. Chatterjee, J.L. Volakis, and D. Windheiser 855

Performance Evaluation of MEI—Based Mesh Truncation Conditions for Finite Element Modeling of Electromagnetic Scattering by Penetrable Bodies
Diana B. Wright and Andreas C. Cangellaris 863

Finite Element Method for Determining the Scattering from Lossy Cylinders Illuminated by Obliquely Incident Plane Waves
Richard K. Gordon and Ahmed A. Kishk 871

Numerical Analysis of Microwave Cavities with Anisotropic Materials
Shirley Min, Jin-Fa Lee and Richard Gordon 879

Author Index 932
