## CONTENTS

### GREETINGS

### Continuous casting

1. **Ladle and Tundish Metallurgy for Continuous Casting**

1.1 The development of secondary steelmaking process routes for the successful continuous casting of flat products  
   D. V. Barradell, A. S. Normanton, S. S. Millman

1.2 Molten steel preparation for continuous casting by means of EAF and secondary metallurgy  
   L. Costanzi, V. De Angelis, D. Capodilupo, M. Mignanti

1.3 Prospectives of ladle metallurgy processes  
   Chr. Gatellier, H. Gaye

1.4 Reactions between tundish lining and steel and their influence on steel cleanliness  
   N. Bannenberg, H. Lachmund

1.5 The role of tundish powders in tundish metallurgy  
   V. Ludlow, H. Watkinson, K. G. Bain, A. S. Normanton

1.6 Mathematical models of fluid flow phenomena in tundish operations  
   J. Szekely, G. Trapaga

1.7 Process technological and metallurgical measures to improve the oxide cleanliness of CC-strands and their evaluation by the MIDAS method  
   H. Jacobi, H. Nilsson, H.-J. Ehrenberg, K. Wünnenberg

1.8 Tundish practices development to improve steel cleanliness and caster operations  
   E. Santa Maria, P. Bellomo, M. De Santis, G. Polli, M. Arnò

1.9 Measures taken in secondary steelmaking and continuous casting to influence type, shape and number of non-metallic inclusions in flat products.  
   H.-P. Narzt, K. Jandl, T. Fastner, K. Antlinger, H. Preßlinger

1.10 Inclusion control in stainless steels at Avesta Sheffield Ltd.  
   B. Harkness, D. Dyson

2. **Mould performance**

2.1 Mould powder consumption – a useful criterion?  
   M. M. Wolf

2.2 Study of mould flux entrapment by monitoring casting parameters on Hoogovens and British Steel slab casters  

III

METEC, Halle 7/D 27
2.3 Model studies of surface wave phenomena in the continuous casting mould
J. H. Watters, G. S. Jiang, C. J. Treadgold, A. Kumar

2.4 Use of an electromagnetic brake (EMBR) on a high-performance continuous casting plant
G. Böcher, U. Hoffmann, P. Müller

2.5 Combined investigations of the EMBR performance at continuous casters of Sollac Dunkerque and Hoogovens IJmuiden

2.6 Lubrification of continuously casted billet mould by ultrasonic vibration
M. Nogues, M. Roscini, M. Forgeoux

2.7 Operation experience with submerged nozzle changing system on two strand slab caster

2.8 Mould performance improvements at the Burns Harbour No 2 slab caster
M. R. Ozgu, M. B. Perrine

2.9 Settlement of suitable casting conditions of microalloyed steels for plates and tubes
E. Santa Maria, A. Ferretti, A. Moschini, G. Salvemini

2.10 Operational experience with a resonance mould for continuous casting of slabs
G. Böcher, U. Hoffmann, U. Göhler, O. A. Schmidt, H. van Wyl

2.11 Results of operational use of a resonance mould
C. Möllers, B. André, F. Bodenstein, H. Rzepczyk, E. Sowka

2.12 Utilization of mould thermal monitoring for improvement of bloom surface quality on the British Steel, Teesside Works 8-strand bloom caster.
D. W. Bruce, N. S. Hunter

2.13 Mould instrumentation to study casting behaviour of billets
J. L. Lagerberg, D. W. van der Plas

3. Process control, automation and quality detection

3.1 Modernization of the casting platform at CC No 1 and CC No 2 of Krupp Hoesch Stahl AG
R. Berger, F. K. Bouillon, K.-U. Köhler

3.2 MIDAS-computer-aided automation of continuous casting plants at Preussag Stahl AG, Salzgitter
U. Hoffmann, V. Grabenhorst, R. Embers, N. Kersten

3.3 Development of fully automated continuous caster at Kakogawa Works
M. Nakao, M. Matsuo, M. Kimura, K. Imiya, M. Shimizu

3.4 Application of thermal modelling on the optimization of continuous casting processes and on-line quality control
N. Bannenberg, K. Harste, J. Klingbeil

3.5 Dynamic secondary cooling model for a continuous casting machine
M. Jauhola, E. Kivelä, J. Konttinen, E. Laitinen, S. Louhenkilpi
3.6 Computerized surface quality prediction in the C.C. of stainless steel slabs
L. Capotosti, R. Capotosti, F. Macci, M. Milone, A. Spaccarotella

3.7 Artificial neural networks for improved condition monitoring and quality prediction
H. Peters, N. Link, W. Ungerer

3.8 Enhanced process controls and visualization with modern communication features
J. Troutmann, J. M. Fernandez, A. Kursfeld, R. Ardell

4. Metallurgy and operational results

4.1 Comparison of curved-mould and vertical-bending type machines for continuous slab casting
E. Sowka

4.2 Casting at near liquidus temperature
P. Naveau, S. Wilmotte, C. Albrecq

4.3 Enhancement of the Scunthorpe slab caster and early operational results

4.4 The design and commissioning of the No 2 continuous casting machine at British Steel’s Port Talbot Works
A. R. Thomas, E. Hughes

4.5 Reduction of center segregation in C.C. slabs at Pohang Works

4.6 Development of Submerged Nozzle for Reduction of Longitudinal Cracks on Continuously Cast Slabs
H. Yamazoye, Y. Tanizawa, A. Satoh, T. Hirata

4.7 Hot commissioning and initial operation of BHP Whyalla’s new combi-caster
E. Vickery, K. Gregory, H. Festl, F. Bayer, K. Fellinger, G. Reithner

4.8 Revamping of Thyssen Stahl AG’s CC bloom caster at Duisburg-Ruhrort to increase productivity and improve quality
E. Sowka, B. Andre, R. Bertram, H. Rzepczyk

4.9 Conversion from bloom to billet casting for high grade wire products at ENSIDESA
R. Morais, O. Suarez, B. Rischka

4.10 Productivity increase in the melt shop at Fundia Steel AB, Smedjebacken, with particular emphasis on billet caster upgrade
I. Isaksson, G. Hällen

4.11 High speed billet casting with convex mold at TOA Steel Himeji Works
M. Tsutsui, M. Shioki, O. Tanno, A. Stilli, F. Kawa

4.12 Investigations and results of SBQ billets cast with double speed at Thyssen Stahl AG, Oberhausen
R. Bruder, J. Wolf, A. Borowski

Ein Unternehmen der EVERTZ-GRUPPE

METEC, Halle 7/D27
4.13 The influence of the solidification structure and the casting speed on the formation of the centre porosity of various steels, measured with the buoyancy method on long round strands
K. Wünnenberg, H. Jacobi, H.-E. Wiemer

4.14 Influence of centre segregation of continuously cast high carbon steel billets on the structure of hot rolled wire rod
W. Dening, H.-J. Eckstein, K. Stercken

4.15 Precipitation of non-metallic inclusions during the solidification of continuously cast bearing steel
B. Forest, J. Salell, Ph. Damie, G. Auclair, G. Baudry, D. Benoit, M. Bobadilla, M. Wintz

Near-net-shape casting

1. Thin slab casting

1.1 Trials for thin slab casting on the conventional two strand slab-caster at Klöckner Stahl GmbH in Bremen
H.-U. Lindenberg, W. Juchhoff, A. Kröker-Buhé, R. Heimann

1.2 The outstanding performance at the Nucor CSP plant in Hickman and its expansion by an additional casting strand
R. Mott, D. Chase, F. Hofmann, F.-J. Küper

1.3 The technology of thin slab casting, production and product quality at the Arvedi I.S.R. Works, Cremona
G. Gosio, M. Morando, L. Manini, A. Guindani, F. Pleschiutschnigg, B. Krüger, H. D. Hoppmann, I. v. Hagen

1.4 CPR—a combined casting—rolling process for the production of steel strips
M. Espenhahn, R. Bertram, G. Flemming, D. Krüger, G. Pietzko, H. Streubel

1.5 Thin slab casting of stainless steel grades at Avesta Sheffield AB
R. Laki, J. Egerstad, S. Seldin, A. Flick, A. Kropf, K. Schwaha

1.6 Flexible thin slab rolling: a new challenge to improve production mix and quality
C. Mantovani, A. Carboni, E. Donini, R. Borsi

1.7 Metallurgical aspects of thin slab casting and rolling of low carbon steels
R. F. Gadellaa, P. J. Kreijger, M. C. M. Cornelissen, B. Donnay, J. C. Herman, V. Leroy

1.8 Thermomechanical treatment of direct charged thin slabs
R. Kaspar, O. Pawelski

2. Casting of long products

2.1 Near-net-shape continuous casting and direct rolling of structural beams at Chaparral steel company, Midlothian
L. F. Rostik

2.2 The use of near-net-shape casting technology for the production of wide flange beams
G. Lessel, H. Grober
2.3 New developments in near-net-shape casting on horizontal continuous casting
J. v. Schnakenburg, R. Winterhager, P. Stadler

3. Strip casting

3.1 DSC – A high productivity concept for strip production of steel
R. Nyström, E. Burström, W. Reichelt, U. Urlau

3.2 Development of twin-drum strip caster for stainless steel

3.3 Recent developments of twin-roll strip casting process at AST Terni steelworks
R. Tonelli, L. Sartini, R. Capotosti, A. Contaretti

3.4 Quality aspects of sheet product cast by the twin roller process
J. C. Yoon, H. K. Moon, J. T. Duncombe, M. Rushforth

3.5 Developments in twin roll direct strip casting
A. L. Robson, J. Wilkinson, G. Thompson

3.6 Perspectives of strip casting technology based on results from the Coilcoast prototype of Allegheny Ludlum
B. Lindorfer, H. Bumberger, Ch. Fürst, G. L. Houze, D. B. Love, M. T. Browne

3.7 Development of an electromagnetic edge dam (EMD) for twin roll casting
I. G. Saucedo, K. E. Blazek

3.8 Micro- and macrosegregations of twin-roll cast stainless steel
Th. Schubert, W. Löser, S. Schinnerling, I. Bächer
