Avenue du Hoggar,
Zone Industrielle de Courtaboeuf,
BP. 112,
F-91944 Les Ulis Cedex A, France
CONTENTS

Volume II

Steels

Fatigue properties of sintered steels
U. Engström and M. Gunnemyr................................................................. 811

Effects of steel powder composition and alloying technique on static and
dynamic properties of P/M materials
Y. Trudel and F. Chagnon ......................................................................... 815

Influence of sintering time and temperature on the fatigue behaviour of
the diffusion alloyed PM steel Fe-4.0%Ni-1.5%Cu-0.5%Mo+0.6%C
K.-H. Lindner and C.M. Sonsino ............................................................ 819

Influence of production parameters on the fatigue properties of low
alloyed PM-steels
D. Spoljaric, H. Danninger, B. Weiss and R. Stickler ................................. 823

Influence of singular defects on the fatigue properties of low alloyed PM-steels

Rolling contact fatigue of sintered steels under Hertzian pressure and sliding
K. Lipp, C.M. Sonsino, D. Pohl and W. Brandt ........................................ 831

Fracture toughness properties of precracked and notched specimens of two
sintered steels
R. Roberti, G.M. La Vecchia and A. Bertasio .......................................... 835

Study of deformation behaviour of sintered steels under impact loading by
means of instrumented charpy testing
G. Straffelini, A. Molinari and V. Fontanari ........................................... 839

Fracture toughness testing of PM-materials

Sintered valve spring collar made of Fe-Ni-Mo-Cu alloy
A. Arvand and A. Haerian .................................................................... 847

Fatigue of P/M specimens in axial loading mode with superimposed
bending stress
J. Bendixen .......................................................................................... 851

Surface residual stress measurements on as sintered and carburized steel parts
G.M. La Vecchia, R. Roberti, A. Bertasio and G.P. Marconi ...................... 855
Effect of boron addition on properties of low alloyed FeMnCrMo steels
M. Selecká, A. Salak and E. Duďrová

Influence of boron on the development of ion-nitrided layers of sintered iron powders
J. Karwan-Baczewska, S. Stolarz, A. Karamara, J. Kazior and J. Lisak

Synthetic graphite in powder metallurgy - a new LONZA graphite grade
K.D. Streb

Microcracks initiation and failure behaviour of sintered steels.
Influence of phosphorus
C. Verdu, C. Gatepin and R. Fougeres

Sintering and microstructure of PM valve seat insert materials
H. Danninger, E. Wolfsgruber and K. Dalal

Manganese alloyed sintered steels prepared from elemental powders
H. Danninger, R. Pölttschacher, G. Jangg, J. Seyrkammer and A. Salak

High strength P/M steel with high hardenability made from high compressibility powder
T. Tsutsui, K. Ishii and M. Yoshida

Mechanical behaviour and damage in sintered infiltrated steels. Effect of the microstructure
A. Lisena, C. Rey and L. Ackermann

Reaction sintering to improve machinability of ferrous PM materials
H.A. Brownlie and C.G. Purnell

Sintered maraging steels
H. Colan and M. Pernes

Reaction product formation and segregation during creep of PM 10Cr-steel
M. Norell and L. Nyborg

High performance alloys by rapid solidification processing
O. Grinder and P. Billgren

A study of dimensional control of high strength P/M steels admixed with copper
Y.T. Chen and R. Kiefer

Recycling by PM of scraps from industrial metal working: case of small-size and highly carburized powders
A. Casagrande, E. Lanzoni, G. Poli and M. Soldati

Formation of intermetallic phases and their influence on iron-based FeSiTi(N,C) PM-alloys
K. Pischang

Obtained micro-alloyed steels by means of powder metallurgy
A. Kobylanski, H. Taghizadeh, L. Ackerman and P. Brunel

Structural formation in Fe-C-sintering by employing accelerating and inhibiting additions
S.M. Metchkova, A.C. Metchkov, E.D. Bendereva and D.K. Lambiev

Simplex model for Fe-P-C powder alloys
V.G. Ljulko, K.K. Shugay, R.A. Martirosjan and A.L. Pivovarov
High Speed Steels

The production and application of PM high speed steels
C.S. Wright................................................................. 937

Properties of PM high-speed steels prepared from water atomized powders
by hot extrusion
B. Sustarsic, F. Vodopivec and L. Kosec.............................. 945

High pressure compacting of the high speed steel powder
J. Asami and T. Aizawa.................................................. 949

Preparation of nickel aluminides by mechanical alloying
M. Magini and W. Guo.................................................... 953

Sintering to full density of high speed steel powders below 1150 °C in a nitrogen
atmosphere
S. Talacchia, S. Jauregi and J.J. Urcola................................ 957

Decreasing the sintering temperature of high speed steel powders in
a nitrogen atmosphere by addition of VC or NbC
S. Talacchia, A. Andonegui and J.J. Urcola............................ 961

Sintering behaviour of a titaniumcarbid and niobiumcarbid strengthening
high speed steel T42 - produced by mechanical alloying
K. Pischang and U. Birth................................................ 965

Phase composition and microhardness of the high-speed steel powders
O.P. Rachek and N.M. Mordovets...................................... 969

P/M high speed steels using fine powders produced by high pressure
water atomization
T. Kohno...................................................................... 973

Investigation of superductility in high speed steels obtained by powder
metallurgy methods
L. Shtyka and K. Gogayev............................................... 977

Heat treatment and mechanical properties of sintered high speed steel
composites containing solid lubricants and hard phases
J.D. Bolton and A.J. Gant............................................... 983

Microstructure and consolidation of microcrystalline high speed steel powders
M. Miskovicová, M. Fáberová and V. Miskovic.................... 987

Densification and microstructure formation of systems based on HSS M2+Cu
at direct vacuum sintering
E. Dudrová, M. Kabátová, R. Bures and F. Molnár.................. 991

Sintering behaviour in high speed steels with phosphorus alloying additions
J. Lisboa, J. Marin, H. Contreras, J. Garín and V.P. Martínez........ 995

Influence of the sintering atmosphere in the heat treatments of high speed steels
M. Ibarra, J. Garín and V. Martínez.................................. 999

Influence of the microstructure on the fatigue and fracture toughness of high
speed steel powders sintered in a nitrogen atmosphere
Optimisation of processing parameters for liquid phase sintering of M2 type high speed steels with carbon, boron and copper additions
A. Cias, J. Lezanski, T. Pieczonka, E. Dudrova and F. Molnár ................................. 1007

Investigation into the vacuum sintering of high speed powders via thermal analysis
J. Konstanty .................................................................................................................. 1011

The effect of VC content and alloying technology on the structure and properties of PM high speed steel
Y.-J. Kim, H. Chung and J.-S. Bae ........................................................................... 1015

Effects of processing route on fracture strength and fracture toughness of a high alloy high speed steel
M. Gomes, A. Wronski and M. Oliveira ................................................................. 1019

A new generation of PM steels for PM compacting tools and other tool applications
P. Billgren and O. Sandberg .................................................................................... 1023

Micro-chipping resistance of powder metallurgical high speed steels and the role of inclusions and processing conditions
A. Nordgren, H. Chandrasekaran and H. Wisell ................................................... 1027

The effect of density on the surface fatigue of ferrous sintered components in rolling contact
P.R. Brewin and P.D. Nurthen .................................................................................. 1031

Microstructure, mechanical and cutting properties of novel water atomised PM tool steels with enhanced sinterability

Measurements and Controls

Quantitative nondestructive evaluation of density of Green state compressed products
J. Muller, L. Ackermann, D. Babot, G. Peix and P. Zhu ........................................... 1041

Contributions for establishing a method for roughness testing of sintered parts
M. Drozda, G. Columpsi, E. Mosca and G. Mair ...................................................... 1045

Study of sources of hardness variation in the manufacturing of shock absorber components
J. Acero ....................................................................................................................... 1049

Statistical analysis of modulus of rupture data with reference to ANSE/ASTEM B528-76 standard
A. Wronski, M. Gomes, Y. Bienvenu and L. Fontaine ............................................. 1053

Break-down, by statistical methods, of hardness values measured on different P/M steels

Application of magnetoacoustic methods for nondestructive investigation of power-metallurgical materials
M. Mihowski, A. Mechkov, A. Popov and A. Gavrilova .......................................... 1061
Dilatometry studies on water atomised stainless steel 316L powders  
K.A. Khor and N.H. Loh ............................................................ 1065

Plasma spray atomisation of aluminium alloy matrix composite powders  
K.A. Khor and F. Boey ................................................................. 1069

Thermal spraying of hydroxyapatite-based bioceramic coatings  
K.A. Khor and P. Cheang .............................................................. 1073

**Metal Injection Molding**

Some critical aspects of commercial powder injection molding process  
A. Bose ..................................................................................... 1079

Two step binder systems for powder injection moulding applications  
M. Bayer ..................................................................................... 1087

Characterization of slip of powder/binder mixtures and its effects in PIM  
filling process analysis  
T.H. Kwon and S.Y. Ahn ......................................................... 1093

Three dimensional granular modeling for metal injection molding  
T. Iwai, T. Aizawa and J. Kihara .................................................. 1097

The quickset process  
C. Quichaud ............................................................................. 1101

Progress in catalytic debinding  
P. Trübenbach, M. Blömacher and D. Weinand  
.............................................................................................. 1105

Properties of iron MIM parts by catalytic debinding method  
N. Ogasawara, S. Ito, Y. Kusano and D. Weinand  
.............................................................................................. 1109

The rheological behaviour of some binders and plastisols used in injection  
moulding  
O.-A. Novae, D. Anton and T. Novae ........................................... 1113

Fundamentals of stearic acid burnout from powder injection moulded compacts  
H.-H. Angermann and O. Van Der Biest .......................................... 1117

Water soluble binder for MIM  
D. Bialo and Z. Ludynski ............................................................ 1121

Effect of binder ashes on the sintering of PIM iron compacts  
H.C. Chen, R.F. Rau and K.S. Hwang .............................................. 1125

Properties of high speed steel MIM parts produced by different types of powders  
H. Miura and T. Honda ........................................................... 1129

The formation of properties of materials and structural parts produced by  
metal injection molding (MIM)  
H. Cohrt, M. Enders and E. Dudenhöfer ....................................... 1133

Effect of TiH addition to sintered Ti powder compacts shaped by  
imjection moldings  
K. Shinohara, H. Kyogoku, H. Jinushi, T. Toda and S. Komatsu  
.............................................................................................. 1137

Injection moulding of 316L stainless steel powder  
O. Kraemer and P. Husum ......................................................... 1141
Near net shape forming of titanium by injection moulding
A. Smolders and R. Gilissen .................................................. 1145

Corrosion properties of MIM 316 L
G. Veltl, T. Hartwig, W. Semrau and F. Petzoldt ........................................ 1149

Continuous thermal debinding of metal injection as-moulded parts
H.-H. Angermann, O. Van Der Biest and J. Paal ................................... 1153

Advances in controlling the critical process steps of MIM
F. Petzoldt ................................................................................. 1157

Debinding conditions affecting mechanical properties of sintered Fe-Ni
compacts made by injection moldings
H. Jinushi, H. Kyogoku, K. Shinohara and T. Toda .................................... 1161

Progresses in continuous catalytic debinding and sintering of
MIM-components
I. Cremer ................................................................................. 1165

Large scale production of stainless steel gears by metal injection molding (MIM)
H. Cohrt, M. Enders and E. Dudenhöfer ............................................. 1169

Carbon control during the debinding of CIP-polyamide mixture using
mixed gases
T.S. Yoon, S. Ahn and C. Park .................................................... 1173

Sintering behavior of injection molded Ti-Fe alloy
H. Kyogoku, K. Shinohara, H. Jinushi, T. Toda and S. Komatsu ................. 1177

Injection moulding of hard metal components
N.P. Dalskov and O. Kræmer ....................................................... 1181

Investigation of binders for MIM of titanium
Th. Hartwig, G. Veltl and H.-D. Kunze .............................................. 1185

Influence of microstructural parameters on the ability to polish stainless steel
MIM parts
F.R. David and J.R. Picaut .................................................................. 1189

Carbon control in reaction sintered 100 Cr 6-type MIM-steel
H. Wohlfromm, M. Schwarz, E. Langer, M. Blömacher and D. Weinand .......... 1193

Aspects in injection moulding of MIM-parts
R. Steger .................................................................................... 1197

Intermetallics

Processing and properties of FeAl produced by reactive HIP'ing
D.J. Stephenson and F. Charpy ...................................................... 1203

Sintering of as reactive sintered and mechanically milled intermetallic
powders from a nickel rich Ni-Al alloy
J.A. Wolska and J.H. Maas .......................................................... 1207

Densification behaviour of RuAl intermetallic compounds produced by
reactive hot isostatic pressing (RHIP)
S. Ishiyama, K.H. Hammelmann, H.P. Buchkremer and D. Stöver .............. 1211
Mechanism of MoSi$_2$ formation during self-propagating high-temperature synthesis
S.-W. Cho, G.-W. Lee, Y.-D. Kim and Y.-S. Kim ........................................ 1217

Synthesis of NbAl$_3$ and Nb-Ni-Al intermetallic alloys by self-propagating reaction sintering
R. Mendes Leal Neto and P.I. Ferreira .................................................... 1221

Reactive synthesis of intermetallic compounds from nickel and aluminium powders densified by extrusion or consolidated by shock wave
J.P. Ponsonnaille and T. Thomas .............................................................. 1225

Reaction sintering of titanium aluminides at different contact areas Ti/Al

Microstructural transformations during the mechanical alloying of Ti-47.5Al-3Cr alloy
V. Jacob, R. Baccino, F. Moret, J. Mishurda, C. Suryanarayana and F.H. Froes ... 1235

Properties and applications of a high specific stiffness mechanically alloyed iron aluminide grade
R. Baccino, D. San Filippo, F. Moret, A. Lefort and G. Webb ........................ 1239

Influence of mechanical alloying on phase formation during reaction sintering of MoSi$_2$-materials
R. Schöll and B. Kieback ................................................................. 1243

Preparation of Ti-Al-foils by roll compaction of elemental powders
I. Morgenthal, B. Kieback, G. Hübner and D. Nerger ................................ 1247

Synthesis of fine grain binary and ternary intermetallic R-M compounds by reduction - diffusion in molten calcium (R = rare-earth, M = 3d transition metal)
M. Febri, E. Claude, P. Chaudouët and J.C. Joubert .................................. 1251

Influence of small contents of rare earth metals on the properties, including the corrosion behaviour, of Ti$_3$Al
J. Breme, A. Borello and F. Uberti ....................................................... 1255

Reactive HIP-sintering of extruded Ti48Al2Cr2Nb-elemental powder mixture
I. Morgenthal, X. Neubert and B. Kieback .............................................. 1259

Large-scaled shock reactive synthesis for Ti-Al intermetallics
S. Kamenosono, T. Katoh, T. Aizawa and K. Tanaka ................................ 1263

Manufacture of TiAl-base sheet material and structural parts by the elemental powder route
B. Kieback, I. Morgenthal, D. Nerger and M. Dahms ................................. 1267

Forging, rolling, and net-shape processing of gas-atomized Ti-48Al-2Cr-2Nb powder compacts
D. Eylon, C.F. Yolton, H. Clemens, P. Schretter and P.E. Jones .................... 1271

Reactive Synthesis

Self propagating reactive synthesis of advanced materials
J.J. Moore ................................................................. 1279

The direct synthesis of dense-shaped nickel aluminide by electroconsolidation$^\text{TM}$
W.M. Goldberger, B. Merkle and D. Boss .................................................. 1287
Al₂O₃-B₄C ceramics made by SHS

TiC-Al₂O₃ ceramics produced by self-propagating high temperature synthesis (SHS)
Q. Tang, S. Yin and H.-Y. Lai............................................. 1299

Mechanically activated sintering of a W-Ni-Fe-Co powder
C. Chausse, E. Gaffet and F. Nardou................................. 1305

Low temperature synthesis of high temperature silicides by mechanically activated annealing processing
N. Malhouroux-Gaffet and E. Gaffet.................................. 1309

Mechanosynthesis of nanocrystalline (Ti, Al)N by ball milling
Y. Chen and J.S. Williams............................................ 1313

Reactive mechanical alloys
E. Ivanov........................................................................... 1317

Metal dispersion enhancement by ball-milling with alumina
A. Van Neste, P.A. Zielinski, S. Kaliaguine, M.L. Trudeau and R. Schulz............................................ 1321

A determination of the reaction kinetics during mechanical alloying
G.B. Schaffer and J.S. Forrester.................................... 1325

Microstructural changes of elemental powders during mechanical alloying
A. Bhaduri, V. Gopinathan, P. Ramakrishnan and A.P. Miodownik............................................ 1329

Kinematic approach of the mechanical alloying physics in the planetary ball mill and horizontal road mill
M. Abdellaoui and E. Gaffet............................................ 1333

Flexible control of high speed mechanical alloying for bulk amorphous materials
T. Aizawa, K. Tatsuzawa and J. Kihara................................ 1337

Effect of compaction density on the combustion synthesis of titanium aluminide
Y.D. Hahn and I.H. Song............................................ 1341

Formation and stability of CoFe and CuFe solid solutions elaborated by mechanical alloying
R. Elkalkouli, M. Grosbras and J.F. Dinhut........................ 1345

Comparison of strength and temperature of reaction between aluminium and the transition metals and the effect on sintering parameters
M.M. Rebbeck.............................................................. 1349

On the nickel-aluminium intermetallics elaboration by mechanical alloying
R. Orban and S. Domsa.................................................... 1353

Nano-crystallization by high speed mechanical alloying
T. Aizawa and J. Kihara..................................................... 1357

Structural evolution in copper-molybdenum during mechanical alloying
P. Chartier, J. Mimault and M. Grosbras........................ 1361

Densification and sintering by electro-dynamic-energy
O. Knotek, M. Böhmer, M. Driga, F. Neuhold and F. Löffler......................... 1365
Hot Isostatic Pressing

Opportunities and design rules for net shape or near net shape components produced by hot isostatic pressing of superalloy powders
G. Raisson and V. Samarov................................................. 1371

WPP processing of high performance materials
M. Koldewitz, H.P. Buchkremer and D. Stöver................................................. 1377

Hot isostatic pressing controlled by an on-line density calculation
P. Billgren........................................................................... 1381

Effect of high pressure during consolidation of rapidly solidified Ti-6Al-4V alloys
Yu.I. Ponomaryov and A.P. Matveyenkov................................................. 1385

Modélisation de la densification prenant en compte les phases transitoires des cycles HIP

Pressing

Compaction of porous materials with high densification rate using shear stresses
S. Domsa, I. Vida-Simiti, T. Canta and D. Sabadus................................................. 1395

Uniformity of density and improvement in dimensional precision of sintered compacts by flow compaction of alumina granule
S. Takahashi and T. Nakagawa......................................................... 1399

Press systems for complicated PM parts
E. Fischer and K. Backer.............................................................. 1403

The pressing force distribution in a powder press
H.-G. Seimetz........................................................................ 1407

New developed CPA-controlled punch adapter - and CNC hydraulic compacting presses for crackfree production of multi level components
R. Link and N. Nies................................................................. 1411

The Gräbener multi-stage calibrating system for sinterparts
K. Stahl.................................................................................. 1415

Vibratory powder filling using electric drive CNC compacting press
H. Tsuru and T. Nakagawa........................................................... 1421

High density P/M near-net-shape components by rotopressing: technology and equipment
G. Pregowski, J. Szymborski and W. Sobol................................................. 1425

On-process nondestructive evaluation of powder compacts by the ultrasonic array sensing
T. Aizawa, T. Watanabe and J. Kihara................................................ 1433

A first order model of stick-slip phenomenon on P/M compacts ejection
G.F. Bocchini and R. Esposito.................................................... 1437
Sintering - Modeling

Phase equilibria and the sintering of cemented carbides
B. Uhrenius

Constitution and structural chemistry in ternary metal boron carbon systems
P. Rogl

In situ-reinforced boride and carbide based hard materials
R. Telle

Phase formation during annealing of cold-extruded elemental powder mixtures
Ti-48at%Al and Ti-48at%Al-2at%Cr
T.J. Jewett, G.-X. Wang, U. Bohnenkamp and M. Dahms

Thermodynamic interactions between powder particles of different heat resistant steel and their influence on microstructure and mechanical properties
R. Prader, B. Buchmayr, H. Cerjak, J. Peterseim and A. Fleming

Microstructure and properties of ceramic reinforced super-duplex stainless steels
M.J. Talvitie and V.K. Lindroos

Calculations of chemical equilibria in Ti-BN system
E. Benko

Densification and alloy formation during sintering of heterogeneous systems
B. Kieback, K. Brand and W. Schatt

Densification of MoSi2 processed by self-propagating reaction hot press
M.-D. Ka, Y.-D. Kim and Y.-S. Kim

Diffusion in the nickel-aluminium system and mathematical modelling of reaction sintering
E. Olevsky, M. Bohsmann, S. Domsa, F. Aldinger and G. Petzow

Synthesis of NiAl from ultrafine powders via solid state reaction and reactive sintering
M. Boshmann, G. Petzow, L. Farber, I. Gotman and E.Y. Gutmanas

Homogenization and densification during solid state sintering of two-component powder compacts
K. Brand and W. Schatt

Solid state sintering of WC-Co
S. Haglund, B. Uhrenius and J. Ågren

Densification mechanisms during the initial stage of solid-phase sintering
J. Boiko, W. Schatt, F. Aldinger and G. Petzow

Full densification mechanism in nanocomposite W-Cu powder compacts
J.S. Lee, T.H. Kim and T.G. Kang

A mathematical model of sintering for materials undergoing phase transformation/phase change
P. Das and H. Behera

Phase reactions and chemical stability of ceramic and solid lubricant particles added to sintered high speed steels
J.D. Bolton and A.J. Gant
