Proceedings of the First International Workshop on

Digital Signal Processing Techniques Applied to Space Communications

DSPTA 88

9–10 November 1988

ESTEC, Noordwijk, The Netherlands
TABLE OF CONTENTS

FOREWORD

Session 1: Audio and Video Communication

Co-chairmen: J.P. Lefevre, Oros, France
R. Viola, ESA/ESTEC

"Trends in Video Communication"
L. Chiariglione, CSELT, Torino, Italy.

"Speech compression algorithms: state of the art overview"
R. Viola, ESA/ESTEC

"Video compression in space environment"
B.L. Combridge, D. Robson, British Aerospace, Stevenage, UK.

"Vector excited coding with vector prediction for 4.8 kbit/s speech coding"
ETSI Telecomunicacion, Madrid, Spain.

"A DSP-based multiprocessor system for image communication at 64 kbit/s"
M. Balestri, A. Rinaudo, W. van Veen, CSELT, Torino, Italy.

"A new speech coding algorithm at 4.8 kbit/s"
J.P. Lefevre, G. Feng, Oros, France.

"A multipulse coding method for both speech and data transmission"
M.G. Di Benedetto, INFOCOM Dpt, University of Rome, Italy
Session 2 : Modem Technology
Chairman : R.A. Harris, ESA/ESTEC

"The transition from analog modems to digital"
F.M. Gardner, Gardner Research Co., Palo Alto, USA.

"Digital detection and synchronization algorithms for advanced digital modems"
H. Meyr, ERT, Aachen University, F.R. Germany.

Joint carrier and synchronism acquisition based on spectral estimation in a
M-PSK receiver",
M. Cabrera, M.E. Santamaria, M.A. Lagunas, ETS Ingenieros de Telecomunicacion,
Barcelona, Spain.

"Tracking performance comparison of clock synchronization algorithms suited for
all digital implementation"
M. Moeneclaey, University of Ghent, Belgium.

"DSP and multirate signal processing in modem application",

"A high performance satellite modem using real-time digital signal processing"
R.D. Allan, D.A. Saunders, Telemetrix Research Ltd., Tewkesbury, UK,
J.R. Bramwell, M. Tomlinson, Plymouth Polytechnic, UK.

"Coded 8-PSK modem for fixed and mobile satellite services based on DSP",
P. Hoeher, H. Lang, DFVLR, Oberpfaffenhofen, F.R. Germany.

"On-board multichannel demodulator for mobile applications using DSP
implementation",
H. Yim, C.C.D. Kwan, F.P. Coakley, B.G. Evans, University of Surrey, UK.

"Digital on-board multichannel demodulation for multifrequency TDMA
communication satellites",
F. Ananasso, G. Chiassarini, G. Gallinaro, Telespazio, Rome, Italy.

"Single DSP implementation of a high-speed echo cancelling modem",
A. Fagan, P. Curran, B. Murray, University College of Dublin, M. Mc Laughlin,
Cork Electronics, Dublin, Ireland.

"Real-time emulation of an MCD within a general-purpose transputer-based OBP
demonstration facility",
C.K. Leong, A. Wishart, A.D. Craig, British Aerospace, Stevenage, UK.
Session 3: VLSI Technology and DSP Architectures

Co-chairmen: W. Kriedte, ESA/ESTEC
L. Popken, ESA/ESTEC

"Introduction to VLSI technology",

"Impact of VLSI technology on DSP systems for space",
R.P. Mathur, D.J. Sharman, British Aerospace, Stevenage, UK

"Multicarrier demodulator for on-board mobile satellite and its relationship to payload design",
G. Björnström, W. Kriedte, ESA/ESTEC

"DSP algorithms and VLSI system design",
B. Hosticka, Fraunhofer - Institute for Microelectronics Circuits and Systems, Duisburg, F.R. Germany.

"The PIRAMID silicon compilation environment",
S. van Lerbeghe, Philips Research Lab., Eindhoven, NL.

"A computer-aided tool for DSP algorithm development",

"VLSI architecture for block matching algorithms",
T. Komarek, P. Pirsch, University of Hannover, F.R. Germany.

"On the interaction between DSP algorithms and VLSI architecture",
G. Fettweis, R. Serra, J. Stahl, University of Aachen, F.R. Germany.
