Proceedings of the
4th Colloquium on
Industrial Aerodynamics
Aachen, June 18-20, 1980

Buildings Aerodynamics
Part 2

Edited by

C. Kramer
Hans-J. Gerhardt
Fluid Mechanics Laboratory
Department of Aeronautics
Fachhochschule Aachen

H. Ruscheweyh
G. Hirsch
Institut für Leichtbau
Aachen
Technical University
CONTENTS

Session 5: Bluff bodies - wind load and flow field

Chairman: Prof. G. V. Parkinson, University of British Columbia, Canada

Fluctuating velocity field and dynamic forces of Kármán vortex streets shed by a circular cylinder ................. page 1
Y. N. Chen

The effect of surface roughness on the flow regime around circular cylinders ................................................. 13
G. Burestl

Review and assessment of various aero and hydrodynamic means for suppressing vortex shedding ..................... 29
M. M. Zdravkovich

The vortex shedding and drag associated with structural angles ................................................................. 47
I. Grant, P. H. Barnes

Side walls in constrained flow .............................................. 59
S. El-Sherbiny

Draught reduction of hyperbolic natural-draught cooling towers as a result of wind ........................................ 71
J. A. Leene

Wind tunnel evaluation of ventilation problems ............ 83
E. J. Plate, J. Loeser
Session 6: Dynamic response - single buildings

Chairman: Prof. Dr. B. Vickery, University of Western Ontario, Canada

Some considerations of combined effects of galloping and vortex resonance ................................................................. page 95
G. V. Parkinson, M. A. Wawzonek

Cross wind vibrations of a 130 m tapered concrete chimney . 109
S. O. Hansen

Design and Performance of a multi-degree-of-freedom aeroelastic building model ......................................................... 123
J. T. Templin, K. R. Cooper

Wind tunnel tests on the dynamic response of the Zarate Brazo Largo cable stay bridge ........................................... 136
L. R. Wootton

Session 7: Dynamic response - groups of buildings

Chairman: Prof. Dr. A. G. Davenport, University of Western Ontario, Canada

Transverse vibration behaviour of steel stacks in a row
- Wind tunnel tests with turbulent flow - ......................... 155
W. Hanenkamp, W. Hammer

Across-wind buffeting in a group of four-in-line model
chimneys ................................................................. 169
B. J. Vickery

Interference effects for groups of stacks ......................... 183
H. J. Gerhardt, C. Kramer
Straked in-line steel stacks with low mass damping

parameter ................................................................. page 195
H. Ruscheweyh

Dynamic response of a building model with a second
model in proximity .................................................... 205
D. M. Sykes

The influence of an upstream structure on the dynamic
response of a square-section tall building ............... 223
T. A. Reinhold, P. R. Sparks

Session 8: Vibration control

Chairman: AOR Dipl.-Ing. G. Hirsch, Aachen Technical University, Germany

Control of wind-induced vibrations of civil engineering
structures ................................................................. 237
G. Hirsch

Passive viscoelastic systems for increasing the damping
of buildings ............................................................. 257
D. A. Gasparini, L. W. Curry, A. DebChaudhury

Mutation damping of wind induced stabilities .......... 271
V. J. Modi, J. L. C. Sun, L. S. Shupe, A. S. Solyomvari

Exploratory study on damping galloping ................. 283
E. Naudascher, J. R. Weske, B. Fey
