PROCEEDINGS
OF THE THIRD ANNUAL
INTERNATIONAL
PCI '81
CONFERENCE

September 14 - 17, 1981
Munich, West Germany
## TABLE OF CONTENTS

<table>
<thead>
<tr>
<th>Title and Authors</th>
<th>Page No.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Novel Soft Magnetic Core Materials and Cores for Reactors in Thyristor Protection and Turn-Off Circuits</strong>&lt;br&gt;G. Hinz, Vacuumschmelze GmbH (D)</td>
<td>1</td>
</tr>
<tr>
<td><strong>Amorphous Metal Reactor Cores for Switching Applications</strong>&lt;br&gt;Carl H. Smith and Milton Rosen, Allied Chemical Metglas Products Division (USA)</td>
<td>13</td>
</tr>
<tr>
<td><strong>A New Converter Topology Confers Continuous Primary to Secondary Turns Ration Variation without the use of Tap Changing Techniques</strong>&lt;br&gt;B. Taylor, International Rectifier (UK)</td>
<td>29</td>
</tr>
<tr>
<td><strong>Permeability and Power Losses in Ferrite Cores on Sinusoidal or Square Wave Conditions up to 1MHz</strong>&lt;br&gt;M. Schlotterbeck and M. Zenger, Siemens AG (D)</td>
<td>37</td>
</tr>
<tr>
<td><strong>Understanding Gate Assisted Turn-Off of an Interdigital, Ultra-Fast, Asymmetrical, Power Thyristor (GATASCR)</strong>&lt;br&gt;Dr. Nigel C. Coulthard and Robert Pezzani, Thomson-CSF, Div. Semiconducteurs, Application Lab (F)</td>
<td>47</td>
</tr>
<tr>
<td><strong>Switching Phenomena and Base Drive Design</strong>&lt;br&gt;Tinus van de Wouw, N. V. Philips, Semiconductor Applications Lab (NL)</td>
<td>58</td>
</tr>
<tr>
<td><strong>Small Signal Dynamical Behavior of Switched-Mode Power Supplies</strong>&lt;br&gt;Norbert Philips, Research Assistant and Guido Francois, Katholieke Universiteit Leuven, Department Elektrotechniek Afd. Microgolven and Lasers (Belgium)</td>
<td>72</td>
</tr>
<tr>
<td><strong>Computer Modeling of Switching Regulators</strong>&lt;br&gt;Kevan T. O'Meara, Sr. Member Tech. Staff, Teledyne Systems (USA)</td>
<td>86</td>
</tr>
<tr>
<td><strong>Using Read-Only Memory in an Adaptive Digital Control System for Switched-Mode Power Supply</strong>&lt;br&gt;D. O. Monteith, Jr., and J. E. Erbs, University of Texas at Austin, Applied Research Labs (USA)</td>
<td>99</td>
</tr>
<tr>
<td><strong>Switching Power Supplies for Electronic Devices with Sine Wave Current Consumption from the Line</strong>&lt;br&gt;Michael Herfurth, Siemens AG (D)</td>
<td>111</td>
</tr>
<tr>
<td><strong>High Power SMPS Require Intrinsic Reliability</strong>&lt;br&gt;Bruce W. Carsten, Project Engineer, Telecom Power Corp (Canada)</td>
<td>118</td>
</tr>
<tr>
<td><strong>Compatible Rectifiers for Today's Fast Switches</strong>&lt;br&gt;F. A. Woodworth, Mullard Hazel Grove (GB)</td>
<td>134</td>
</tr>
<tr>
<td><strong>Parallel Operation of Switching Power Transistors</strong>&lt;br&gt;David Watson, Intersil (GB)</td>
<td>144</td>
</tr>
<tr>
<td><strong>Power MOSFETs as Switches in the European Environment</strong>&lt;br&gt;David Watson, Intersil Datel (GB)</td>
<td>156</td>
</tr>
<tr>
<td><strong>Drive Circuits for Gate Turn-Off Switches</strong>&lt;br&gt;F. J. Burgum and J. A. Houldsworth, Mullard Application Laboratories, Philips Elcoma (GB)</td>
<td>168</td>
</tr>
<tr>
<td><strong>Pulse Width Modulator Control Methods with Complementary Optimization</strong>&lt;br&gt;Norbert Winter, H. Lautz and Martin Tscherm, AEG-Telefunken(D)</td>
<td>175</td>
</tr>
<tr>
<td><strong>Thyristor Emitter Shorting and its Effect on Device Characteristics</strong>&lt;br&gt;H. B. Assalit, EETech (USA)</td>
<td>186</td>
</tr>
<tr>
<td><strong>The Advent of High Current ASCR's</strong>&lt;br&gt;Ralph E. Locher, General Electric Application Engineering, Semiconductor Prods. Dept. (USA)</td>
<td>196</td>
</tr>
<tr>
<td><strong>Characteristics and Applications of the Asymmetric SCR</strong>&lt;br&gt;Henri Digneffe, Applications Manager, RCA Corp. (Belgium)</td>
<td>208</td>
</tr>
<tr>
<td><strong>Power System Design Optimization Using Language Multiplier Techniques</strong>&lt;br&gt;Professor Fred C. Lee, Virginia Polytechnic Institute and State University and U. Yu, Xerox, Inc. (USA)</td>
<td>228</td>
</tr>
</tbody>
</table>
Output Filter Design for PWM Single-Phase Inverters  
—S. Bolognani, G. Buja and S. Ciscato, Instituto di Eletrotecnica e di Elettronica, Universita di Padova (Italy)  

How to Improve Transistorized Bridge Converters  
—Klaus Rischmueller, Thomson CSF, Div. Semiconducteurs (F)  

Autoadaptive Forced Commutation Circuits for Thyristor Static Converters  
—Professor B. Trannoy, Directeur du Laboratoire d'Electrotechnique et d'Electronique Industrielle, and H. Foch and M. Metz, Institut National Polytechnique de Toulouse (F)  

A New Line of High Performance UPS Using Multiepitaxial Planar Transistors  
—G. B. Freri-Sice and A. Fagloni, SGS-ATES (Italy)  

Design of High Performance Inverters  
—Norbert Lartigue, Director R&D, Electronique Aerospatiale (EAS) (F)  

How to Optimize the Darlington Switch  
—Jean Marie Peter, Thomson CSF, Div. Semiconducteurs (France)  

High Voltage High Current Glass Passivated Devices  
—M. Chadda, Dr. Hans-Peter Hempel and W. Schierz, Semikron International, Dr. Fritz Martin, GmbH & Co. KG (D)  

Bipolar or Power MOS?  
—Pierre Aloisi, Motorola Semiconducteurs S.A. (F)  

Thermal Characteristics and Power dissipation in Reverse Conducting Thyristors  
—G. Sogni, S. Tenconi and M. Zambelli, Ansaldos.p.A. (Italy); and Vincenzo Cricenti, Instituto di Eletrotecnica de l'Universita di Genova (Italy)  

Base Drive Design for High Voltage Darlingtonss  
—Ad de Pagter, N. V. Philips, Semiconductor Applications Lab (NL)  

New Reverse Conducting Thyristors for Modern AC and DC Motor Drives  
—Dr. J. Vitins and P. DeBruyne, Brown, Boveri & Cie, Power Semiconductor Dept. (CH)  

Series Resonant Power Control of DC Motors  
—D. R. Hyde, Mullard Application Laboratories (GB)  

A New Gate Turn-Off Thyristor, GTO Used in a PWM Motor Drive  
—F. J. Burgum, W. Ebbinge and J. A. Houldsworth, Mullard Application Laboratories (GB)  

PWM Variable Frequency Transistor Inverter Provides Flexible Operation for A.C. Motors  
—Arturo Luccaroni, R&D Dept. Manager, Sillectron Elettromeccanica ed Elettronica Industriale S.p.A. (Italy)  

A Transistor Chopper for an Electric Vehicle Drive  
—Vladimir Blasko, Dipl. Ing., Rade Koncar Electrical Industries (Yugoslavia)  

A New Traction System via Self-Controlled Synchronous Motors for Electric Locomotives  
—Jean Hamel, Jeumont-Schneider and Andre Cossie, Ste. Nationale des Chemins de Fer Francais (F)  

Design, Construction and Evaluation of Very High Current Darlington Transistors  
—D. Hartman, General Electric Company (USA)  

Electronic Ballast for Modern Fluorescent Lamps with SIPMOS-Transistors BUZ 41  
—Walter Hirschmann, Siemens AG (D)  

The Electronic Ballast  
—Jon D. Paul, Paul Laboratories (USA)  

Novel High-Frequency Inverters using High-Power Static Induction Transistors and Their Applications  
—H. Ogiwara, O. Kumura, T. Dezaki, Department of Electrical Engineering, Ashikaga Institute of Technology; M. Tatsuta, Tohoku Metal Industries, Ltd.; J. Hishizawa, Research Institute of Electrical Communications, Tohoku University; and M. Nakaoka and T. Maruhashi, Department of Electrical and Electronic Engineering, Kobe University (Japan)  

The Protection of Solid State Devices in the Presence of Electrostatic Discharge  
—Odo Herganhan, Burroughs Corporation (USA)  

A Family of Gate-Assisted Turn-Off Thyristors with 900V Periodic Voltage and 5μs Turn-Off Time  
—Dr. P. Voss, Siemens AG (D)  

A New Technique for Series-Connection of Power-Transistors in High Voltage  
—Prof. H. Foch, J.P.R. Arches, T.S. Hsu, and J. Roux, Institut National Polytechnique de Toulouse (F)  

Any papers received after our publication deadline, but still in time to be printed in this proceedings, will be found at the back of the book but not listed here in the contents.
