Editorial

KEYNOTE ADDRESSES

Quality assurance testing of medical software: a plea and an example
   Willems J L (Belgium) 2
Aspects of the computerized patient record and organizational redesign
   Ball M J (U.S.A.) 10
Successful informatics: the missing ingredient
   Manning B R M (U.K.) 13
High performance computing and communications: the medical connection
   Lindberg D A B (U.S.A.) 19
From AIM research to application and market development
   Rossing N (Belgium) 24

SECTION I: ARTIFICIAL INTELLIGENCE, EXPERT SYSTEMS AND
DECISION SUPPORT SYSTEMS

Section IA: Methodology

Formal languages and metabolic pathways
   Hofestädt R (Germany) 28
Fuzzy inference and hypothetico-deductive reasoning integration for clinical diagnosis purposes
   Alte da Veiga F and de Matos Barbosa M J (Portugal) 33
Classification tools for diagnostic rule formation from protein maps
   Appel R D, Bologna G and Hochstrasser D F (Switzerland) 40
Knowledge discovery from medical databases
   Bell D A, Quan J W and An Z (N. Ireland) 45
Use of neural networks for electrocardiogram feature extraction, recognition and classification
   Strintzis M G, Maglaveras N, Stalidis G and Magnialis X (Greece) 50
A connectionist expert system and its application to a large set of medical data
   Gammerman A J and Styri H (U.K.) 55
Decision support system for gated heart studies
   Andrew M L, Bose D K, Burwood R J, Lutkin J E and Pinto M (U.K.) 60
Literal meaning of sentences from medical free text
   Pietrzyk P M (Germany) 64
Design-a-Trial, a knowledge-based aid for writers of clinical trial protocols
The AIM-IREP project on integrated rehabilitation programs: the IREP vision
   Florit A M, de Simone M, Rossi Mori A, Ricci F L, Patacconi A and Galanti M (Italy) 74
Computerised management system for general practitioners: A comparison of two methodologies
Health care computing: a neural network approach
   Clarke M, Shen Z, Jones R W and Alberti T (U.K.) 84

Section IB: Applications

MSR: A decision support system for the decision strategy of surgeons
   Consorti F, Assenza M, Ferri F, Gargiulo A, Lombardi A, Martinis G and Di Paola M (Italy) * 90
A comparison of the accuracy of the decision-aid computer programs Aesculapius and QMR in the diagnosis of acute abdominal pain (first communication)
   Naumov L B, Roy-Shapira A P, Waksman J, Porath A, Bits E J, Hershman E and Margolis C Z (Israel) 95
Knowledge representation for an anticoagulant therapy advisor
Decision support for capacity planning in the clinical laboratory
   Van Merode G G and Goldschmidt H M J (The Netherlands) 105
SETH: An expert system for the management of acute drug poisoning in adults
   Darmoni S J, Massari P, Droy J M, Moiriot E and Leroy J (France) 110
A decision support system for the intensive care unit
   Richards B, Au Y P, Conroy I and Doran B (England) 115
Computer-assisted bone marrow interpretation: a pattern approach
   Nguyen D T, Cherubino P, Tamino P B and Diamond L W (Germany) 119

* poster
SECTION II: CLINICAL INFORMATION SYSTEMS

Development of a medical database for an orthopaedic clinic. Problems, solutions and success
Klüber D (Germany) 160

Follow-up of chronic haemodialysis patients by a computer program
Chabukovski V, Sikole A and Spiroski M (Macedonia) 164

Design of an oral health information system based upon a computer based dental record

A haematology database: sickle-cell patient records
Richards B, Chan J, Hyde K and Shannon T (England) 174

Alarms and alerts for intensive care
Clarke K, Sinnott M, Griffin D, O'Moore R, Carey M, Kirkham R and Grimson J (Ireland) 178

Informatics in clinical toxicology: automatic toxicokinetic data processing
Bodenreider O, Kopferschmitt J, Sauder P and Jaeger A (France) 183

PEDS (Pediatric Electronic Data System) – A multimedia clinical learning environment
Lustig J V, Hutchison R, Groothuis D S and Kaplan E D (U.S.A.) 188

Development and evaluation of a computerized patient education system for the Hadassah University Hospital
Shabo A, Kopelman A and Chajek-Shaul T (Israel) 192

Children emergency aid information system
Meshalkin L, Goldberg S, Lomovskikh V, Sklar M, Tsybulkin E, Mahanek A and Galkov A (Russia) 195

SECTION III: NURSING INFORMATICS

The impact of conceptual modeling on nursing information systems
Turley J, Narayan S, Corcoran-Perry S and Lewis M (U.S.A.) 200

The use of web analysis in the introduction of nursing information systems
Louw G (England) 204

Nursing summary and experienced workload
Delacrétaz A C and Frutiger P (Switzerland) 207

Information exchange between physicians and nurses
Tange H J and Smeets R P H M (The Netherlands) 213

Rostering for primary nursing with quality control
Richards B and Hardiker N (England) 218

SECTION IV: HOSPITAL INFORMATION SYSTEMS

Section IVA: Methodology
HISS – the national perspective
Thorp J M (U.K.) 224

Towards a secure and standardised hospital communication system
Hergenröder G, Horbach L, Röhrig S, Wenzl B and Bell R K (Germany) 227

Hints for developing and implementing hospital departmental applications: Twenty years of experience
Madjaric M and Gell G (Austria) 231

Integration of information in a medical center: probability, feasibility, reality
Tanner J, Powitzer G and Sesam S (Israel) 235

Customization environment for an act-based hospital information system
Kanoui H, Joubert M, Riouall D and Favard R (France) 241

A flexible management information system in a hospital
Bavelaar G, Mulder M A and Bokslag D M (The Netherlands) 246

Problems and solutions in the process of computerising patient wards in third world hospitals
VillelaGF Jr. (Brazil) 249
Modern hospital management and information system planning
Chen T S and Yang W T (Taiwan, R.O.C.) 254

Information management approach at the University of North Carolina Medical Center
Hammond J E and Kichak J P (U.S.A.) 259

Sharing patient data among heterogeneous medical databases
Williams M H and Hu J (U.K.) 265

How to improve health care knowledge while developing computer systems?
Nøhr C and Bernstein K (Denmark) 270

Section IVB: Applications

- Integrating a clinical information system into a decentralised hospital information system
  Höfener J, Stiller S and Waterbärf F (Germany) 274

- An integrated information system for operating room management
  Veiga A and Fernandez E (Portugal) 279

- HIS - support and operation: options to choose
  Pluyter-Wenting E S P, Bakker A R and Kouwenberg J M L (The Netherlands) 282

- Networks and message handling systems for hospital communication
  Wentz B, Hergenröder G and Horbach L (Germany) * 286

- Supporting the surgical treatment cycle in a heterogeneous HIS by using an intelligent message handling system
  Pollwein B, Gierl L, Ertülüs S and Greiller R (Germany) 290

- The NORA hospital mail system
  Hartk G, Skjervold S, Skifjeld K and Pieen J (Norway) 296

- Interconnecting a specific departmental tool to a HIS using speech recognition as an example

- A computerized hospital department - general approach
  Mor R (Israel) 307

- MISSION: A new approach to integrated medical information systems
  Heemskerk-van Holtz P R B and Hofdijk W J (The Netherlands) 312

- The necessity for an integrated hospital information system demonstrated by the retrieval of patient data
  Brigi B, Glück E, Haux R, Sawinski R and Winter A (Germany) 317

- One year of experience with EDP support for drug therapy at Göteborg University Hospital
  Wieczorek D, Prokosch H U, Neidhart B, Kreckel H and Dudgeon J (Germany) 322

- Central Middlesex Hospital and I.T.
  McQuaid L (U.K.) * 326

- Dental patient management system on a microcomputer network in a large dental school
  Morganstein S I, Tay W M and Wong L C (U.K.) * 328

SECTION V: IMAGING AND SIGNAL ANALYSIS

- A parallel topological map for image segmentation
  Frey J, Scheppelmann D, Engelmann U and Meinzer H-P (Germany) 332

- Multimodel segmentation of MR images
  Schäffer M, Engelmann U, Scheppelmann D and Meinzer H-P (Germany) 338

- Design of an image manipulation software for remote expert consultation
  Ligier Y, Ratib O, Perrier R, Girard C and Logean M (Switzerland) 343

- Computer-assisted interaction with and manipulation of multimodal images in medicine
  Englmeier K-H, Hiebert T and Fink U (Germany) 347

- Segmentation of hand-wrist radiographs
  Manos G K, Cairns A Y, Ricketts I W and Sinclair D (Greece and U.K.) 355

- Some experiments in compressing angiocardiographic images according to the Peano-Hilbert scan path
  Pinciroli F, Combi C, Pozzi G, Portoni L, Negrotto M and Invernizzi G (Italy) * 362

- Imaging of orthogonal ECG
  Bachárová L and Melotová J (Slovakia) * 366

- Quantification of ECG late potentials by wavelet transformation
  Dickhaus H, Khadra L and Brachmann J (Germany) 370

- Picture Archiving and Communication System (PACS) based on open and modular architecture

- Architecture of MIDAM in a HIS and PACS environment
  Young I R, Bell D A and Sadreddini M H (U.K.) * 379

- Euripacs – DECIS
  Gell G, Fotter R and He J (Austria) 383

- Baseline criteria for meaningful computer assisted auscultation of the knee
  Barr D A, Long L, Kornohan W G and Mollan R A B (U.K.) * 386

- Automated analysis of coronary contour
  Kerbel S, Terdiman R and Laniado S (Israel) * 392

* poster
SECTION VI: DATA SECURITY AND PROTECTION

The business of security
Barber B, Garwood D and Treacher A (U.K.) 396
A methodology for the development of secure health information systems
Gritzalis D, Katsikas S and Pangalos G (Greece) 402
Data security in medical information systems using a generic model
Sanders P and Furnell S (U.K.) 410
Provision of network security in a health care environment
Patel A and O'Connell S (Ireland) 415
Data protection and PACS
Bakker A R (The Netherlands) 420
Legal and ethical approach of visual telediagnosis in pathology
Allaert F A, Dusserre L and Dusserre P (France) 426

SECTION VII: TELEMEDICINE

A framework for Telemedicine services
Williams M H, Mahr B, Venters G and Lutzebäck D (U.K. and Germany) 430
Telediagnosis through a digital network: the French pathologists' experience
Dusserre P, Allaert F A, Dusserre L, Martin E, Retaillau B and Yvon P J (France) 435
Improving access to the patient electronic medical record using mobile data communications
Jones N K and Hamilton M (U.K.) 440
Benefits of EDI in primary care in the U.K.
Daniels A, Turner M J and Gillam M T (England and U.S.A.) 443

SECTION VIII: LABORATORY SYSTEMS

The EDIFACT standard in a clinic-laboratory environment
Khan A H (Sweden) * 448
Marine bacterial classification by gaschromatographic data and neural net
Giacomini M, Ruggiero C, Calegari L, Bertone S, Casareto L and Reina S (Italy) * 453
Medical edis message development and interchange formats
DeMoor G, Schilders L and Segers D (Belgium) 456
Changes in medical informatics in former socialist countries: experience of Slovenia
Adamic S, Ilic M, Marolt F, Suselj M and Vreca C (Slovenia) 460
Automatic measurement, interpretation and analysis of bacterial sensitivity against antibiotics
Bergqvist F, Alfredson H, Medin G and Malmborg A-S (Sweden) * 464

SECTION IX: CODING, CLASSIFICATION AND DRG

The coding cage
Rossi Mori A, Gangemi A and Galanti M (Italy) 466
On the "natural" behaviour of medical concepts: an analysis of SNOMED combinations
Agnello P, Galeazzi E and Rossi Mori A (Italy) 473
The Clinical Terms Project
Read J D (U.K.) 480
Death and readmission rates as indicators of quality of care
Beguin C and Roger France F H (Belgium) 483
The definition of a new uniform basic data set for hospital cancer registries in Germany
Dudeck J, Wächter W, Altmann U and Katz R (Germany) 489
Classification of microcalcifications by neural networks
Désarnaud S and Strauss A (France) 493
Development of an inter-hospital case-based information architecture for resource management, quality assessment and strategic planning
Closon M C, Beguin C, Michel C, Roger France F H and Willems J L (Belgium) 498

SECTION X: PRIMARY HEALTHCARE, PUBLIC HEALTH AND EPIDEMIOLOGY INFORMATION SYSTEMS

National psychiatric information system in Israel
Kimhi R and Jouchowitsky T (Israel) 506
Evaluation of ambulatory health care services in Hong Kong
Aharonson-Daniel L, Johnston J, Ho L M, Lo A, Cheng K K, Ong S G, Leicester M, Pei G K and Hedley A J (Hong Kong) 509

* poster
MIQUEST – A project to enable collection of morbidity data from different computer systems in primary care
Booth N and Purves I (U.K.) 516

A microcomputer-based system for distributed statistical analysis of mortality data using a CD-ROM database
Lobo da Costa M Jr, Sabbatini R M E, Becker R A and Tardelli A (Brazil) 518

Medical informatics in the post-socialist East Europe. A view from the Czech Republic
Vejvalka J and Neuwirt K (Czech Republic) 523

Towards a distributed health register: The National Injury Surveillance System in Norway
Hvistendahl V, Hurlen P, Sjøingstad A and Stabell Wetteland S (Norway) 528

Object oriented conceptual modelling for public health
Helder J C, Jager J C and Reinders A (The Netherlands) 533

Bridging the ‘information divide’ – A role for hypermedia in primary healthcare informatics
Pitt M A and Kay S (U.K.) 538

Information use, information perceptions and information flow in primary care medical practice
Griffin E M, Vidgen G A and Hepworth J B (U.K.) 543

Computerization of general practitioners for purposes of epidemiologic surveillance: setting up an experimental network
Mariotti S, Buonomo E, Grossi P, Laconi A, Lancia A, Lucchetti G, Palombi L and Panfilo M (Italy) 547

An overview of the SAPPHIRE project
Kay S, Redman R, McWilliams A, Bradley P and Daniels A (U.K.) 550

Optimized presentation of statistical data on hospital morbidity
Graubner B and Ehiers C-T (Germany) 554

Improving the capture of staging data for cancer registries
Pheby D F H and Etherington D J (U.K.) 562

The search for a model of healthcare – An analysis of the history and prospects as seen in the U.K.
Cohen B and Molteno B (U.K.) 566

Telematics in the primary health and community care sector
Baig S S (Belgium) 570

SECTION XI: MEDICAL RECORD SYSTEMS

Multimedia patient folders: computerized support for clinical activities in a federated information system
Ahlström M, Consorti F, Ferri F, Gargiulo A, Ljungberg J, Pisanelli DM and Ricci F L (Sweden and Italy) 574

Management information tools for clinical practice
Veloso M and Telmo Costa C (Portugal) 579

A computer-based, distributed multimedia patient record: Use of new technologies for computer-based medical records
Arnold U and Peter G (Germany) 585

Re-engineering of the medical record processes using workflow techniques
Nazareth A (U.K.) 591

The challenge of the nineties: bringing multimedia healthcare records to life
Ceusters W, Bonneu R, DeMoore G, Lapeer R and Thienpont G (Belgium) 594

Smart card for diabetes care – the DIABCARD project

Requirements for an integrated patient record system for the care of the elderly
Heathfield H A, Kirby J, Nowlan N and Rector A (U.K.) 604

CLINIC – a computerized medical record system for use in primary health care setting – a descriptive study
Warshawsky S, Noi E, Boehm R, Goldfarb D, Urkin J and Margolis C (Israel) 608

Physician use of a computerized medical record system during the patient encounter: a descriptive study

SECTION XII: BIOMETRY, BIOMATHEMATICS AND STATISTICAL COMPUTING

A rapid algorithm and a computer program for multiple test procedures using logical structures of hypotheses
Hommel G and Bernhard G (Germany) 616

Nonparametric analysis of small medical data sets – NPAR: an integrated software solution
Bregenzer T and Gefeller O (Germany) 618

The application of variable selection procedures in medical data analysis
Gefeller O, Kron M and Bregenzer T (Germany) 622

The use of minimization to balance groups of patients: ease of use with SAS/IML
Cauquil J and Eychenne J L (France) 627

A new procedure for choosing maximal matched pairs sets
Martus P (Germany) 631

Evaluation of screening methods for Down's pregnancy using bootstrap comparison of ROC curves
Aegerter P, Muller F, Nakache J P and Bouté A (France) 634

A methodology for finding optimal dosage levels in multi-drug treatment interactions
Matos Barbosa M (Portugal) 639

* poster
SECTION XIII: MANAGEMENT OF MEDICAL SERVICES

Implementing a patient-based information system in a large organisation: implementation as a management task
Højslet H C (Denmark)

A unified approach to management issues in healthcare
Manning B R M and Glouberman S (U.K.)

Testing the feasibility of a concept for a MIS
Mulder M A, Bavelaar G and Bokslag D M (The Netherlands)

Developing information systems for quality assurance in the UK
Walshe K (U.K.)

RAM: Resource Allocation Model for health resources allocation
Guerra R, Ferri F, Maseratini R, Fourabbaes E and Rafanelli M (Italy)

SECTION XIV: SOFTWARE, DATABASE AND APPLICATION TOOLS

Meta information management for a large, integrated HIS
Hooymans M and Liefkes H (The Netherlands)

The image related services of the HELIOS software engineering environment

Design, implementation and evaluation of user programs with respect to quality assurance guidelines - or are we still able to write our own programs?
Brandmaier R, Spinar T and Schneider T (Germany)

Hypertext and the object oriented paradigm: combining concepts for a better medical record
Ilha J O (Brazil)

An object-oriented general practitioner medical information system: the ISAAC approach
Bertelli S, Frasine R, Balestrieri C and Bugli Innocenti E (Italy)

Automated query formulation for the Ringdoc pharmacological database
Oakes M P and Taylor M J (U.K.)

Customization of medical information retrieval
Joubert M, Fieschi M, Robert J-J and Botti G (France)

The use of CASE tools in static and dynamic modelling of healthcare delivery processes with special reference to community healthcare nursing
Eliasz A, Manning B and Chattaway C (U.K.)

Use of an object-oriented approach for the management of patient waiting lists in ophthalmology
Meyer D A (Germany)

Experiences with a nation-wide 4GL information system for bone marrow procurement
van der Zanden H G M, Bakker J T and Oudshoorn M (The Netherlands)

How to provide computerised decision aid for rare diseases
Kindler H, Densow D and Fiedler T M (Germany)

An editor for medical data acquisition sheets in an object-oriented software development environment
Höfener J (Germany)

A multimedia system for the collection and analyses of knowledge on parasites
Lalle C (Italy)

Cardiological database management using object oriented analysis
Pappas C, Tsikotis A, Mavromatis A, Pashalouthi V, Pangalos G and Maglaveras N (Greece)

Task analysis in the design of a human-computer interface for a ward based system
Frascina T and Steel R A (U.K.)

Bar code technology in health care: Using a business model for study of technology application and dissemination
Timpka T, Nyce J M, Sjöberg C, Rehnwall H and Herbert I (U.K.)

* poster
