SEKE'93

The 5th International Conference on Software Engineering and Knowledge Engineering

Co-Sponsored by
Knowledge Systems Institute
The Johns Hopkins University Applied Physics laboratory

In Cooperation with
IEEE Computer Society and ACM SIFSOFT

Tutorials, June 14-15, 1993
Technical Program, June 16-18, 1993
Hotel Sofitel, San Francisco Bay, USA
# Table of Contents

**Foreword** ................................................................. iii

## Knowledge-Based Query Processing

A Framework for Query Processing Utilizing Knowledge  
Atsuo Yoshitaka, Masahito Hirakawa, and Tadao Ichikawa (Japan) ........................................ 1

An Office Document Retrieval System with the Capability of Processing  
Incomplete and Vague Queries  
Qianhong Liu, Jason T. L. Wang and Peter A. Ng (USA) .......................................................... 11

Knowledge Representation for Intelligent Query Processing  
R. D. Semmel (USA) .......................................................... 18

DARET: A Logic-Based Language in Object-Oriented Databases  
Tak-Wai Chan and Wen-Cheng Wang (Taiwan) .......................................................... 28

## Object Orientation in SE & KE

The Design of Real-Time Distributed Information Systems with Object-Oriented and  
Fault-Tolerant Characteristics  
S.K. Chang, A. Perkusich, J. C. A. De Figueiredo,  
B. Yu, and M. J. Ehrenberger (USA) .......................................................... 36

Executable Specifications for the Design of Object-Oriented Systems  
Yi Deng, Raimund K. Ege, and Wei Sun (USA) .......................................................... 46

The SAOS Approach to Software Lifecycle Support  
Toshimi Minoura, Sungwoon Choi, and Anil Srivastava (USA) .................................................. 54

CLOS: A Key Issue To Bridge the Gap Between Object-Oriented and Logic Programming  
Vincenzo Loia and Michel Quaggetto (Italy) .......................................................... 62

## Panel: The Workshop on Software Automation

Software Automation  
Daniel E. Cooke (USA) .......................................................... 70

## Reverse Engineering

An Expert Tool For Automatic Visual VLSI Reverse Engineering  
N. G. Bourbakis and D. Rice (USA) .......................................................... 73

Programs as Databases: Treating Code and Comments as First Class Objects  
Antonio Massari, Gennaro Costagliola, Panos K. Chrysanthis,  
and Shi Kuo Chang (USA) .......................................................... 78

Reverse Engineering Structured Code to an Object-Oriented Representation  
Don McFall, Gillian Sleith and John Hughes (Northern Ireland) .................................................. 86

A Re-engineering Tool for the Reuse of Large Scale Software Systems  
William C. Chu and Sukesha Patel (USA) .......................................................... 94
Small-Group Presentations

Catastrophe Prevention in Safety-Critical Systems
Alfs T. Berztiss (USA) .................................................. 102

Acquisition, Analysis and Validation of Informal Requirements
Brigitte Biebow and Sylvie Szulman (France) ......................... 109

A High Level Programming Language Based Upon Ordered Multisets
Daniel E. Cooke (USA) ................................................... 117

BENTON: A Multi-Agent System for Larch Specification Generation
Perry Alexander (USA) .................................................. 125

Temporal Reasoning in a Medical Expertise
Michel Dojat and Claudette Sayettat (France) ....................... 134

Rule-Based Programming for Real-Time Knowledge-Based Systems Development
Frank P. Coyle, Murat M. Tanik, and Dennis J. Frailey (USA) ........ 142

The Use of Refinement Metrics to Assess Programming Language Support for the Stepwise Refinement Process
Robert G. Reynolds and Jonathan I. Maletic (USA) ............... 150

Intelligent Assistance for Transformation-Based Environments
Michael DeBellis (USA) ................................................ 158

The Design and Specification of SEMAL - A Cost Language Based on the Calculus of Self-Modifiable Algorithms
Eugeniusz Eberbach (Canada) ............................................ 166

Closing the Knowledge Engineering Gap
Mari Georges (France) .................................................. 174

Engineering Issues for Nonmonotonic Knowledge: Structuring, Specification, Modules
Grigoris Antoniou (Germany) ............................................ 183

BIZSPEC: A Business-Oriented Model for Specification and Analysis of Office Information Systems
Trent Jaeger and Atul Prakash (USA) ................................... 191

A Knowledge Processing Language and Its Parallel Inference System
Cui Zhang (USA), Qinping Zhao, and Jiafu Xu (China) ............ 199

Virtual Agents and Virtual Communities: An Agent-Oriented Software and Knowledge Engineering Paradigm for Distributed Cooperative Systems
Wen-Ran Zhang and Mei-Ying Cheng (USA) ......................... 207

Panels: Advances in SE & KE

A Computational Theory of Knowledge Discovery and Revision
Aizhong Li and Xuhua Liu (China) ..................................... 215
Visual Software Requirements Specification Language: VRDL
Atsushi Ohnishi (Japan) ................................................................. 219

Restricted Abduction in Constraint Logic Programs
Enrico Maim (France) .................................................................. 222

A Version and Configuration Model for Software Evolution
Salah Badr and Luqi (USA) ............................................................ 225

Modeling Semantic Data Concepts with VDM
Régine Laleau and Philippe Facon (France) .............................. 228

An Experimental Analysis for Classifying Specification Processes
Seiichi Komiya, Motoshi Saeki, Shinichi Honiden, Junzou Kato, Akira Ohmori,
Hisayuki Horai, Shigeru Ohtsuki, and Kazuhiro Ohmaki (Japan) ....... 231

A Generic Shell-Specialized Knowledge Acquisition Tool for Developing
Network Management Software
Chau-Young Lin, Chih-Cheng Chien, and Cheng-Seen Ho (Taiwan) ...... 235

Mode Based Type Inference for Prolog Programs
Dongwook Shin, Youngmin Chung, and Hyunsoo Yoon (Korea) .......... 239

A New Complexity Metric for OPS5 Rule-Based Systems
Albert Mo Kim Cheng (USA) ....................................................... 244

VCFS: A File System for Transparent Version Control
Chye-Lin Chee, Sevki S. Erdogan, and Chon-Keat Wong (Singapore) .... 248

Multi-Layer Repertory Grid Classification for Increasing Software Reusability
Sen-Tarng Lai and Chien-Chiao Yang (Taiwan) ............................... 252

Knowledge Engineering in Fault Diagnostic Problem Solving
Lianhui Chen and Paul Voumard (Australia) ................................. 255

Issues in the Development and Application of Reuse Metrics in a Corporate Environment
Jeffrey S. Poulin (USA) .............................................................. 258

An Expert Solution to Functional Testability Analysis of VLSI Circuits
M. Bombana, G. Buonanno, P. Cavalloro, F. Ferrandi, D. Sciuto, and G. Zaza (Italy)...... 263

A Common Architecture To Encourage Reuse Of Natural Language/Text Processing Tools
T. Richard MacMillan, Martha L. Farinacci, Sharon J. Laskowski,
Elaine P. Lusher, and Leonard J. Seligman (USA) ......................... 266

A Neural Net-Based Approach to Software Metrics
G. Boetticher, K. Srinivas, and D. Eichmann (USA) ....................... 271

Machine Learning for Program Transformations in Software Reuse
C. P. Willis and D. J. Paddon (England) ......................................... 275

HyperKnowledge Engineering: The Next Generation of Intelligent Hypertext Documents
Israel Hilerio, Roger Lippert, and Murat M. Tanik (USA) ................. 278
Rapid Prototyping of User Interfaces in the KIWIS System
Francois Staes, Laura Tarantino, and Dirk Vermeir (Italy) .................................................. 355

A Case for Declarative Programming-in-the-Large
Paul Singleton and Pearl Brereton (England) ................................................................. 360

More Expressive Temporal Logic for Specifications
Noriaki Yoshiura and Naoki Yonezaki (Japan) ............................................................... 363

Reuse-Oriented Knowledge Engineering with MoMo
Hans Voss and Angi Voss (Germany) ................................................................. 367

Knowledge-Level V&V

Debugging Logic-Based Requirements Specifications - a FRORL Approach
Jeffrey J. P. Tsai, Alan Liu, and Krishnakumar Nair (USA) ........................................ 372

A Framework for Systematic Testing of Software Specifications
Wei-Tek Tsai, Weiwen Xie, Imran A. Zualkernan, and Satish K. Musukula (USA) .......... 380

Using the Inference Engine Strategy in the Automatic Construction of Test Cases for a
Knowledge-Based System
Ruddy Lelouche (Canada) and Laurence Vignollet (France) ........................................ 388

Perspectives in Knowledge Base Verification
Du Zhang (USA) .................................................................................................................. 396

Tools and Environments

Towards a Formalized Context for Designing User Interface Management Systems
W. David Hurley (USA) and Niels Vejrup Carlsen (Denmark) .................................... 406

An Intelligent Environment for Spacecraft Simulation
Alex Quilici and Lawrence Miller (USA) ................................................................. 414

The Tool Development Language TDL for the Software Development Environment WSDW
A. De Lucia, M. Napoli, G. Tortora, and M. Tucci (Italy) .......................................... 421

An Intelligent Documentation Support Environment
Jason T. L. Wang, Fortune S. Mhlanga, Qianhong Liu,
Wen-Chung Shang, and Peter A. Ng (USA) ................................................................. 429

Program-Level V&V

An Empirical Study of Intelligent Test Case Generation Methods for Software
Branch Coverage
Kai H. Chang, James H. Cross II, W. Homer Carlisle, and Shih-Sung Liao (USA) ......... 437

Experience Verifying a Rule-based Program as Part of a Cleanroom Project:
AOEXPERT/MVS
Todd R. Kushner and Deborah S. Eisenberg (USA) .................................................. 445
Developing and Analyzing Classification Rules for Predicting Faulty Software Components
Adam A. Porter (USA) .......................................................... 453

How Semantical Design Languages Help to Preserve Specification/Design-Consistency
Christian Stary and Rudolf Freund (Austria) .................................. 462

Panel: KE in Concurrent Engineering and Experience Factories
Knowledge Engineering in Concurrent Engineering and Experience Factories
David Eichmann [Moderator] (USA) ............................................. 472

Panel: Software Engineering in the Year 2000
Software Engineering in the Year 2000
Bruce I. Blum [Moderator], Victor Basili, S. K. Chang, Michael Evangelist,
C. V. Ramamoorthy, and Raymond T. Yeh .................................. 473

Reuse
Reusing a Large Domain-Independent Knowledge Base
Thomas Pirlein (Germany) ....................................................... 474

Architecture-driven Reuse of Code in KASE
Sanjay Bhansali (USA) .......................................................... 483

Acquiring Design Schemas for Software Reuse
Mehdi T. Harandi (USA) and Hing-Yan Lee (Singapore) .................. 491

An Environment for the Control and Software Integration of Expert Systems
Robert K. Chun and Bradley J. Perry (USA) ............................... 499

Testing and Understanding Programs
Reverse Engineering and Interactive Animation of Ada Programs
G. Canfora, A. Cimitile, U. De Carlini, and L. Sansone (Italy) ............... 507

Partial Evaluation for the Understanding of FORTRAN Programs
Sandrine Blazy and Philippe Facon (France) .................................. 517

Implementation-Oriented Testing and Reliability Determination of Prolog Programs
Alireza Azem, Fevzi Belli, and Oliver Jack (Germany) ....................... 526

Recovering Conceptual Data Models is Human-Intensive
F. Abbattista, F. Lanubile, and G. Visaggio (Italy) ......................... 534

Panel: Knowledge-Based Support for Reverse Engineering
Reverse Engineering
Frank W. Calliss, Joseph Urban, James H. Cross II, and Vaclav Rajlich (USA) .... 544
The Dynamics of Model Construction

Object Evolution
M. Magnan and C. Oussalah (France) ................................................................. 546

Induction of Generic Data Models by Conceptual Clustering
Guy Mineau, Robert Godin, and Rokia Missaoui (Canada) .................................. 554

Multiview Modeling in Software Engineering
Markku Oivo (Finland) ...................................................................................... 565

Cardinality Evolution in Specifications
Martin S. Feather (USA) ................................................................................ 575

Panel: Future Directions of the KBSA Program

Intermediate Executable Architectural Specifications for KBSA, Part I
Michael Evangelist (USA) ................................................................................ 584

The KBSA ADM Process Model
Michael Debellis (USA) .................................................................................... 585

Intermediate Executable Architectural Specifications for KBSA, Part II
Yi Deng (USA) .................................................................................................. 586

Process Integration for KBSE Environments
Walt Scacchi (USA) ........................................................................................ 587

The Knowledge-Based Software Assistant Program
Douglas A. White (USA) .................................................................................. 588

Prototyping

Developing Knowledge-Based Systems with Active Expert Participation
Kristian Sandahl (Sweden) ................................................................................ 589

Prototyping in Transformation-Based CASE Environments
Odd Ivar Lindland, Geir Willumsen, Jon Atle Gulla, and Arne Solvberg (Norway) .... 596

Automated Merging of Software Prototypes
David A. Dampier, Luqi, and Valdis Berzins (USA) ............................................ 604

A Packager for Multicast Software in Distributed Systems
Chen Chen, Elizabeth L. White, and James M. Purtilo (USA) .............................. 612

A Context for Software Development

Situated Software Design
Hubert F. Hofmann, Rolf Pfeifer, and Erik Vinkhuyzen (Switzerland) ..................... 622

Action Design: From Modeling To Support of the Software Process
Toomas Timpka, James M. Nyce, Cecilia Sjöberg, and Mikael Johansson (Sweden) ...... 629
ISESS '93 .... A Reality Check
Dr. David W. Russell (USA) ................................................................. 637

Software Maturity Measurement for Software Risk Management
Raymond A. Paul (USA) ................................................................. 641

SE & KE Process Issues
A Meta Knowledge Structure for Program Development Support
Chunye Li and Setsuo Ohsuga (Japan) ........................................ 649

KBS Development: From Design Models to Implementations
Willem Jonker (Germany) and Bob Goedhart (The Netherlands) ........ 657

Plan-Based Guidance for Knowledge-Based Software Engineering
William C. Sasso and Michael DeBellis (USA) ......................... 665

Software Engineering Disciplines in the Visual Era
Charles R. Kirklen and Murat M. Tanik (USA) ......................... 673

Diversity in Formal Methods
An Integrated Development Environment for Formal Specifications
Michael R. Laux, Robert H. Bourdeau, and Betty H. C. Cheng (USA) ............ 681

Transforming Postconditions To Aid Program Development
Jianxin Li (USA) ................................................................. 689

Attributed State Machines For Behavior Specification of Reactive Systems
Shiyuan Ding and Takuya Katayama (Japan) ......................... 695

Formal Program Development by Transformation and Non-Functional Properties
Evaluations. An Application to Numerical Programs
Yamine Ait-Ameur (France) .................................................... 703

Acknowledgment of SEKE'93 Reviewers ..................................... 711

Authors' Index ............................................................................. 712
