### COMPUTATIONAL FLUID DYNAMICS I

1.1 Numerical Computation of 2-D Viscous Flow Field through Turbomachinery Cascades  
**Xu Yanji and Chen Naixing** .......................................................... 3

1.2 Variant Turbomachines Projecting Method on Mathematical Modelling of Turbulent Flows  
**A.B. Shabarov** .......................................................... 13

1.3 A Technique of Predicting Off-Design Performance for a Multistage Axial-Flow Compressor Modified Using a Additional Inlet Stage  
**Wang Qinghuan** .......................................................... 20

1.4 Accelerated Computation of Viscous Incompressible Flows with Heat Transfer  
**Seungsoo Lee and George S.Dulikravich** ........................................... 25

1.5 Computation of Compressible Turbulent Flow on $S_2$ Stream Surface by Use of Non-Orthogonal Curvilinear Coordinate Equations  
**Liu Hongsheng, Ge Manchu and Lou Yiping** ........................................ 35

1.6 An Implicit Numerical Scheme for Compressible Navier-Stokes Equations  
**Bin Liu and Yimin Xiang** .......................................................... 41

1.7 Discussion on Three Versions of SIMPLE Procedure  
**Zheng Zhang** .......................................................... 45

### COMPUTATIONAL FLUID DYNAMICS II

2.1 Nozzle Flows Solved by the Pressure Based Algorithm in Non-Orthogonal Curvilinear Coordinates  
**Z.-Q. Du and J.-Z. Xu** .......................................................... 55

2.2 Time-Dependent Three Dimensional Navier-Stokes Solution for the Thermally-Active Enclosure Problems  
**Soon-Cheol Shin and Keun-Shik Chang** ........................................... 60

2.3 Using Kinetical-Consistent Finite-Difference Schemes for Calculating Gasdynamic Separation Flows  
**T.G. Elizarova and B.N. Chetverushkin** ........................................... 67

2.4 A Numerical Method for Compressible Navier-Stokes Equations  
**Huang Aixiang and Wang Qinghuan** ........................................... 77

### COMPUTATIONAL FLUID DYNAMICS III

3.1 The Application of Denton’s Scheme to Transonic Diffuser Turbulent Flows  
**Zhang Shucheng and Huang Xijun** ........................................... 87

3.2 A New, High-Resolution Hybrid Scheme for Homogeneous and Nonhomogeneous Hyperbolic Conservation Laws  
**Wang Bao-Guo and Chen Nai-Xing** ........................................... 93

3.3 High Order Monotone Difference Schemes for Gas Dynamics Equations  
**Favorsky A.P., Tishkin V.F. and Vyaznikov K.V.** .................................... 102

3.4 The Computation of Transonic Flows and the Method for Capturing Shock Waves in Turbomachinery Cascades  
**Liu Shunlong and Yang Hong** ........................................... 107
**COMPUTATIONAL FLUID DYNAMICS IV**

4.1 Determination of Various Internal Flow Using the “Parametric Polynomial Method”
Chen Zuoyi, Su Hong and Xue Liang ............................................................................... 117

4.2 Family and its Dual Family of Variational Principles for Direct Problem of Pure Substance flow along $S_2$-Streamsheet and a Finite Element Solution of Transonic Steam Flow
Hongyi Xu and Gaolian Liu ............................................................................................... 121

4.3 A Systematic Approach to the Search and Transformation for Variational Principles in Fluid Mechanics with Emphasis on Inverse and Hybrid Problems
Gaolian Liu ....................................................................................................................... 128

**TURBULENT FLOW**

5.1 Mathematical Models of Atmospheric Turbulence in Planetary Boundary Layer
A.K. Ray .............................................................................................................................. 139

5.2 Drag Reduction in Turbulent Tube Flow by Additives of Konjaku Flour
Han Shifang, Wang Yubin and Chen Shiwei ....................................................................... 147

5.3 Drag Reduction by Passive Control at transonic Speeds: the Skin–Friction Equation
Atila P Silva Freire ............................................................................................................. 151

5.4 Experimental Study for the Criteria of the Flow Modes Between the Taylor Vortex and Spiral Vortex in the Wide Gap Width of the Co–Axial Cylinders
Akira Ogawa, Yoshiiiko Fujita and Hisao Nagabayashi .................................................. 159

**BOUNDARY LAYER FLOW I**

6.1 Effects of Endwall Boundary Layer Fences on the Aerodynamic Performance at a Turbine Cascade
Tatsuo Kawai ..................................................................................................................... 171

6.2 Time and Frequency Domain Investigations of the Velocity Components in a Turbulent Boundary Layer by Means of LDA
A. Cenedese, F. Di Felice and G.P. Romand ..................................................................... 180

6.3 Three–Dimensional Boundary Layer Calculation on Pump Impeller Blades
Wu Yulin, Yan Chao and Mei Zuyan ................................................................................ 187

6.4 Prediction of End–Wall Separation in Hub Region of a Steam Turbine under Low Volume Flow
Zhu Qin and Jiang Zikang ................................................................................................. 194

6.5 Effect of Transverse Convex Curvature on Turbulent Flow and Heat Transfer
K.C. Kin, Y. Lee and E. Ma ............................................................................................... 202

6.6 Prediction of the Separation Bubble on a Circular Cylinder
Jan Citavy .......................................................................................................................... 208

**BOUNDARY LAYER FLOW II**

7.1 Some Preliminary Experimental Results on Passive Control of Shock Wave Boundary Layer Interaction in Compressor Cascades
Yu Shen, Li Jianyi, Yu Bin and Fan Chunfu ....................................................................... 217

7.2 An Analysis of Dynamic Distortion and its Control Downstream of Strong Shock–Turbulent Boundary Layer Interaction
He Zhongwei ..................................................................................................................... 220
7.3 Experimental and Theoretical Investigation of Turbulent Shock Boundary Layer Interaction with Passive Flow Control
R. Bohning

INTAKE, DIFFUSER AND NOZZLE FLOWS

8.1 On Mass Flow Matching of Inlet and Performance Comparison for AB Combined Engine
Xing Jun Bo

8.2 The Study of the Flow Field Characteristics of the Turbulence Generator
Shi Wangxing

8.3 Aerodynamic Properties of Certain Annular Diffusers Used in Outlet Branches of Blade Machines
Miroslav Hibs

8.4 Numerical Simulation of Gas Streams in Hypersonic Nozzles Using Simplified Navier–Stokes Equations
A.P. Byrkin, V.A. Sabelnikov and A.I. Tolstykh

8.5 Experimental Analysis on Swirling Flow and Performance of Bent Diffuser Ducts
R. Bettocchi, G. Cantore and D. Moro

8.6 Axial Compressor Axi–Radial Diffuser with Flow Swirl Governing
A.V. Sudarev, V.H. Duberschtein and B.S. Kanevsky

AIRFOIL AND JET FLOWS

9.1 Experimental Investigations on the Subsonic and Transonic Flow in a Wind Tunnel

9.2 Experimental Study of a 3-D Turbulent Wake behind an Infinite Swept Airfoil at Large Incidence
V. Jayaraman, G. Pailhas and J. Cousteix

9.3 Preliminary Investigations in the Exit Region of a Jet in a Cross Flow
Jean–Marc Charbonnier and Roger M. Leblanc

9.4 Eigenvalue Problems in the Theory of Thin Jets Buckling
Alexander Yarin, Boyko Tchavdarov and Stefan Radev

CASCADE FLOW

10.1 An Investigation of Characteristics of Transonic and Viscous Flows for Turbine Cascades
Xin Yuan and Zikang Jiang

10.2 The Effects of Freestream Turbulence on a Tandem Cascade Performance
Zhou Zhenggui and Wu Guochuan

10.3 Effect of Blade Curving on Vortices Streamwise in Cascade Exit Flow Field
Han Wanjin, Zhao Guilin, Xu Wenyuan and Wang Zhongqi

SECONDARY FLOW

11.1 Numerical Analysis of Viscous Flow in Axial Compressor with Corrected Turnings
Li Ping and Zhou Xiuhai

11.2 The Investigations of the Effects of the Aspect Ratio on Cascade Performance
Li ly and Yan Ru–Qun

11.3 Numerical Simulation of Flow Field on S2 Stream Surface of Turbine Stage
THREE-DIMENSIONAL FLOW

12.1 Numerical Simulation of Gas Dynamic and Thermal Processes in Turbomachine Elements
M. Ja. Ivanov, V.K. Kostege and A.S. Liberzon .......................................................... 353

12.2 Numerical Computations of 3-D Turbulent Flows in Turbomachinery Cascades and Comparison with Experimental Data
Chen Naixing and Xu Yanji ................................................................................. 363

12.3 A Numerical Analysis of a High Specific Speed Francis Turbine
R. Schilling, H. Haas and C. Watzelt .......................................................................... 374

12.4 Measurement of Three-Dimensional Flow Fields in Axial Pump Impellers
Michael Radke and Helmut E. Siekmann ................................................................. 380

12.5 The Computation of Three Dimensional Jets
Francis Lebecuf and Guangping Huang ................................................................. 390

12.6 Three-Dimensional Flows in Jet Engine Air Intake Ducts
S.S.H. Ho, Y. Noguchi, D.F. Myring and J.L. Livesey ............................................... 396

TURBOMACHINERY I

13.1 An Experimental Investigation of Variable Camber Inlet Guide Vanes
Liu Zhamin, Hui Zhaoen and Zhao Fensheng .......................................................... 411

13.2 Designing the Compressor Blading Using the Aerodynamic loading Concept
V.S. Beknev, S.E. Vasilenko, A.F. Kooflov and R.Z. Tumashev .................................. 419

13.3 Application of Bezier–Bernstein Polynomials and Non–Orthogonal Curvilinear Coordinates to the 2–D Direct Problem to Axial–Flow Turbomachinery Blade Cascades
Ludek Belik ................................................................................................................ 428

TURBOMACHINERY II

14.1 A Numerical Method for Solving Aerodynamic Hybrid Problem of Fully 3D Flow in Turbomachinery
Chen Naixing, Dong Ming and Zhang Jialin .................................................................. 441

14.2 Variational Finite Element Method with Variable Domain for Solving Hybrid Problems of Three–Dimensional Incompressible Rotor Flow
Shan Yan and Gaolian Liu .......................................................................................... 449

14.3 Variational Finite Element Method with Variable Domain for Solving Type 'A' Hybrid Problem of Blade–to–Blade Compressible Flow Along an Arbitrary Streamsheet of Revolution
Shan Yan and Gaolian Liu .......................................................................................... 457

14.4 Analytical Solutions to Design Turbomachines Geometry Using an Incompressible Fluid Flow Formulation
Giampaolo Navarro ...................................................................................................... 464

14.5 Viscous–Inviscid Computation of Cascades with a Inverse Problem Method for the Subsonic and Transonic Flow
Ge Manchu, Lou Yiping and Yu Zhengti ...................................................................... 473

14.6 A Numerical Method for Solving the Inverse Problem of Cascade Viscous Flow
Wang Zhengming ......................................................................................................... 482

14.7 Calculation of a Boundary Element Inverse Problem for the Flow on A $S_2$ Stream
17.5 Performance of a Small Exhaust Gas Turbocharger with Compressor Inlet Prewhirl
D.Burhorn, M.Malobabic and M.Rautenberg .................................................. 587

17.6 On the Problems of Design for Radial Vaneless Diffusers with Convergent Walls
Dou Huashu ........................................................................................................ 595

17.7 Influence of Inlet Flow Distortion on the Performance of a Radial Vaneless Diffuser of a High Speed Centrifugal Compressor
D.N. Reddy ........................................................................................................ 602

UNSTEADY FLOW I

18.1 Frequency Analyses of High Reynolds Number Recirculated Flows behind Two–Dimensional Sudden Expansions
Yves Gagnon, Andre Giovannini and Patrick Hebrard ..................................... 611

18.2 Instability of Flow through Multiple Throttlings
Boniforti M.A., Mele P. and Morganti M. ............................................................. 618

18.3 The Influence of Fluid Viscosity Variation on Oscillating Flow Waveform in Tubes
Chen Zuoyi and Su Hong .................................................................................. 624

18.4 Experimental Determination of the Relative Pressure Field at the Tip of a High Speed Turbine Rotor Blade Row
M.V.A. Murthy, S.Soundranayagam and S.J.K. Murthy ..................................... 629

UNSTEADY FLOW II

19.1 Prediction of Unsteady Force Distribution along the Span of Rotor Blades of Axial Flow and Compressors
Zhuang Fangyuan, Wang Jianmin and Wei Jun .................................................. 641

19.2 The Analysis of Sound Field and Flow Field of Low Pressure Axial Flow Fan in Rotating Stall
Dong Guoping and Zhuang Fanyuan .................................................................. 647

19.3 Experimental and Theoretical Investigations on the Noise Emission of Axial Flow Fans
Saban Caglar and Karl-Otto Felsch ................................................................ 652

UNSTEADY FLOW II

20.1 Unsteady Three–Dimensional Flow Field Inside and Downstream of an Annular Compressor Cascade
H.E. Gallus, H.D. Schulz and C. Poensgen ........................................................ 661

20.2 Experimental Investigation of the Transient Behaviour of Axial Flow Compressors
Bing Hu, Guo–Cai Tang and Hui–Ming Zhang ................................................... 675

20.3 An Investigation of Speed Transient Behaviours of Axial Flow Compressors
G.C. Tang, X.J. Li and P.L. Ye ........................................................................... 680

20.4 Prediction of Stall Boundary in Axial Flow Compressors with the Small Disturbance Theory
Zhu Jiuniang, Liu Zhiwei and Wang Hongji ...................................................... 688

20.5 A Simple Solution of Post–Stall Transients in Axial Compression Systems
Hu Ju, Zhang Hui Min and Tang Guo Cai .......................................................... 695

20.6 The Experimental Investigation of the Inlet Distortion Simulation Equipments
Lin Qixun, Cheng Fuqun, Zhang Dong and Fang Xin .......................................... 701
MULTIPHASE FLOW

21.1 Numerical Analysis of Full Gas–Particle Cascade Flow
Ling Zhiguang and Xiang Lifeng .................................................. 709

21.2 Calculation of the Maximum Flow Rate and Critical Parameters of Saturated
Steam in Nonequilibrium Expansion
Zhang Jinling and Miao Naijin ...................................................... 715

21.3 Submicroscopic Free Surface Problems in Gas–Liquid Two–Phase Flow
Lu Wenqiang .............................................................................. 720

21.4 Pressure Drop of Pulverized Coal in Dense–Extrusion Flow
Wang Weng, Yu Rongxian and Wang Maohua .................................. 726

21.5 The Problems of One and Two–Phase Flows
O.A. Povarov, A.U. Kurshakov and V.A. Philippenko ......................... 730

21.6 Experimental Investigation of the Discharging Regularity of Steam Accumulator
Chen Shiyi, Sun Zequan and Zhang Xinming .................................... 739

THERMODYNAMICS AND COMBUSTION I

22.1 Simulation of Turbulent Flow Inside the Combustion Chamber of a Reciprocating
Engine
Y.Mao, M.Buffat and D.Jeandel ..................................................... 747

22.2 Numerical Simulation of the Scavenging Process of an Engine Configuration
Dong-Bong Lee and Hyun–Jin Kin .................................................. 754

22.3 Numerical Investigation of Hydrogen Combustion in a Supersonic Flow in
Variable Cross–Section Channels
E.A. Meshcheryakov and V.A. Sabelnikov ....................................... 758

22.4 Gas Dynamics of Flow Structure in a Channel under Thermal and Mechanical
Throttling
Baranovsky S.I. and Levin V.M. .................................................... 763

22.5 The Effect of Air Pollution on the Combustion in a Supersonic Flow
A.S. Nadvorsky ............................................................................ 768

THERMODYNAMICS AND COMBUSTION II

23.1 Derivations of Gasdynamic Functions with Varying Specific Heat, their
Analytical Solutions and Some Applications
TSUI Chih–ya (CUI Ji–ya) .............................................................. 773

23.2 A Survey Method of Jet Fuel Combustion Properties
Rong Weijun .............................................................................. 777

23.3 The Effect of the Nozzle Configuration and its Relative Length on Aerodynamics
of the Axi–Symmetrical Impinging Jet
Sudarev A.V., Mazur A.I. and Zaharov U.I. ..................................... 783

23.4 Calculation of Aerodinamics and Convective Heat Exchange of Axially
Symmetrical Impinging Jets through Application of Preset Distance Parameter
Sudarev A.V. and Zaharov U.I. ...................................................... 791

AUTHOR INDEX ............................................................................ 799
