# Contents

## VOLUME 1

### FOUNDATIONS

Symbols and Subsymbols for Representing Knowledge: A Catalogue Raisonné  
Marcello Frixione, Giuseppe Spinelli and Salvatore Gaglio ........................................... 3

A Symbol Is Not a Symbol  
Nils Dahlbäck .................................................................................................................. 8

Execution Architectures and Compilation  
Stuart J. Russell .................................................................................................................. 15

### TOOLS

Parallel Iterative $A^*$ Search: An Admissible Distributed Heuristic Search Algorithm  
Shie-i Hwang and Larry S. Davis .......................................................... 23

Correct Parallel Status Assignment for the Reason Maintenance System  
Rosanne M. Fulcomer and William E. Ball ........................................... 30

Single-Agent Parallel Window Search: A Summary of Results  
Curt Powley and Richard E. Korf .............................................................................. 36

Searching Game Trees in Parallel Using SSS  
Subir Bhattacharya and A. Bagchi ............................................................................. 42

Platypus: A Constraint-Based Reasoning System  
William S. Havens and Paul Stephen Rehfuss .................................................. 48

Domain Dependence in Parallel Constraint Satisfaction  
Paul R. Cooper and Michael J. Swain ............................................................................. 54

A Universal Programming Language  
Hans Werner Guesgen ................................................................................................. 60

Explaining Prolog Based Expert Systems Using a Layered Meta-Interpreter  
Leon Sterling and L. Umit Yalcin .......................................................... 66

Simulation of Hybrid Circuits in Constraint Logic Programming  
Thomas Graf, Pascal Van Hentenryck, Claudia Pradelles and Laurent Zimmer 72

A Framework for Network Modeling in Prolog  
Zdravko I. Markov ........................................................................................................ 78

An Evaluation of DRete on CUPID for OPS5 Matching  
Michael A. Kelly and Rudolph E. Seviora .................................................. 84

The Search Ahead Conflict Resolution for Parallel Firing of Production Systems  
Ching-Chi Hsu and Feng-Hsu Wang ............................................................................ 91

A Technique for Customizing Object-Oriented Knowledge Representation Systems, With An Application to Network Problem Management  
Lisiane Goiffaux and Robert Mathonet ........................................................................... 97

Contexts: Dynamic Identification of Common Parameters in Distributed Analysis of Complex Devices  
Sanjaya Addanki, Roberto Cremonini and J. Scott Penberthy ........................................ 104

A Knowledge-Based Software Information System  
Premkumar Devanbu, Peter G. Selfridge, Bruce W. Ballard and Ronald J. Brachman 110

Chart Parsing of Flowgraphs  
Rudi Lutz ....................................................................................................................... 116

Call-Graph Caching: Transforming Programs into Networks  
Mark Perlin .................................................................................................................... 122

A New Metaphor for the Graphical Explanation of Forward-Chaining Rule Execution  
John Domingue and Marc Eisenstadt ........................................................................... 129

Reconstructive Explanation: Explanation as Complex Problem Solving  
Michael R. Wick and William B. Thompson .................................................. 135

Adaptation-Based Explanation: Extending Script/Frame Theory to Handle Novel Input  
Alex Kass ......................................................................................................................... 141

### PARALLEL AND DISTRIBUTED PROCESSING

A Vectorization Technique for Prolog without Explosion  
Yasushi Kanada and Masahiro Sugaya .................................................. 151

Unrestricted And-Parallel Execution of Logic Programs with Dependency Directed Backtracking  
Nikos Drakos ................................................................................................................... 157

A Sequential View of AND-Parallelism Through Partial AND-Processes  
Bernd Schend .................................................................................................................. 163

Unsupervised Learning by Backward Inhibition  
Tomas Hrycej ................................................................................................................ 170

On Multi-Layered Connectionist Models: Adding Layers vs. Increasing Width  
Chung-jen Ho ................................................................................................................ 176

Generation, Local Receptive Fields and Global Convergence Improve Perceptual Learning in Connectionist Networks  
Vasant Honavar and Leonard Uhr ............................................................................... 180

Beyond PDP: The Frequency Modulation Neural Network Architecture  
Hideto Tomabeuchi and Hiroaki Kitano .................................................. 186

Integrating Knowledge-Based System and Neural Network Techniques for Robotic Skill Acquisition  
David A. Handelman, Stephen H. Lane and Jack J. Gelfand ........................................ 193
Experiences Implementing a Parallel ATMS on a Shared-Memory Multiprocessor
Edward Rothberg and Anoop Gupta .......................... 199
Neural Computing on a One Dimensional SIMD Array
Stephen S. Wilson .................................................. 206
The ELINT Application on Poligon: The Architecture and Performance of a Concurrent Blackboard System
James Rice .......................................................... 212

REAL-TIME AND HIGH PERFORMANCE

The Implementation of Expert, Knowledge-Based Systems
John Debenham ...................................................... 221
Knowledge Base Compilation
F. D. Highland and C. T. Iwaskiw ................................ 227
Rapid Retrieval Algorithms for Case-Based Reasoning
Richard H. Stolter, Andrea L. Henke and James A. King ............. 233
Minimizing Response Times in Real Time Planning and Search
Shashi Shekhar and Soumitra Dutta ................................ 238
Intelligent Monitoring and Control
Barbara Hayes-Roth, Richard Washington, Rattikorn Hewett, Micheal Hewett and Adam Seiver ......................... 243
Input Data Management in Real-Time Al Systems
Richard Washington and Barbara Hayes-Roth .............. 250
Real-Time Al Systems: A Definition and An Architecture
Rajendra Dodhiawala, N. S. Sridharan, Peter Rauels and Cynthia Pickering .............................................. 256

SEARCH

Node Aggregation for Distributed Inference in Bayesian Networks
Kuo-Chu Chang and Robert Fung .................................. 265
Experimental Evaluation of Preprocessing Techniques In Constraint Satisfaction Problems
Rina Dechter and Itay Meiri ..................................... 271
Partial Constraint Satisfaction
Eugene C. Freuder ................................................... 278
An Algebraic Approach to Constraint Satisfaction Problems
Igor Rivin and Ramin Zabih ...................................... 284
A Comparison of ATMS and CSP Techniques
Johan de Kleer ....................................................... 290
Fast Recursive Formulations for Best-First Search That Allow Controlled Use of Memory
Anup K. Sen and A. Bagchi ......................................... 297
Towards Finding Optimal Solutions with Non-Admissible Heuristics: A New Technique
Henry W. Davis, Anna Bramanti-Gregor and Xiaofeng Chen .......................................................... 303
Constrained Heuristic Search
Mark S. Fox, Norman Sadeh and Can Baykan ......................... 309
Multi-Dimensional Heuristic Searching
Peter C. Nelson and Lawrence J. Henschen ....................... 316
The Reason for the Benefits of Minimax Search
Anton Schuecher and Hermann Kaindl ................................ 322
Generalized Game Trees
Richard E. Korf ..................................................... 328
On Optimal Game-Tree Search using Rational Meta-Reasoning
Stuart Russell and Eric Wefald .................................. 334
Conspiracy Numbers and Caching for Searching And/Or Trees and Theorem-Proving
Charles Elkan ........................................................ 341

AUTOMATED DEDUCTION

Preprocessing Search Spaces for Branch and Bound Search
Qiang Yang and Dana S. Nau ..................................... 349
And-Or Graphs Applied to RUE Resolution
Vincent J. Digricoli, James J. Lu and V. S. Subrahmanian ............ 354
A Rational Reconstruction and Extension of Recursion Analysis
Alan Bundy, Frank van Harmelen, Jane Hesketh, Alan Smaill and Andrew Stevens .................................. 359
Recognizing Unnecessary Inference
Dan Benanav .......................................................... 366
Abstract Theorem Proving
Fausto Giunchiglia and Toby Walsh ................................ 372
Structuring Computer Generated Proofs
Christoph Lingenfelder ............................................. 378
A Computational Structure for the Propositional Calculus
M. J. Shensa ......................................................... 384
Program Derivation Using Analogy
Mehdi T. Harandi and Sanjay Bhansali ............................. 389
Logic Programming with General Clauses and Defaults Based on Model Elimination
Marco A. Casanova, Ramiro Guerreiro and Andrea Silva ......................... 395
Reducing the Derivation of Redundant Clauses In Reasoning Systems
Rolf Socher-Ambrosius ............................................ 401
Explanation Based Program Transformation
Maurice Bruynooghe, Luc De Raedt and Danny De Schreye.................. 407
The Specialization and Transformation of Constructive Existence Proofs
Peter Madden ......................................................... 413
On Wu's Method for Proving Constructive Geometric Theorems
   Dongming Wang .................................................. 419
On the Decidability of Formulae Involving Continuous and Closed Functions
   Domenico Cantone and Eugenio G. Omodeo ...................... 425
An Approximate Solver for Symbolic Equations
   Elisha Sacks .................................................... 431
Lock, Linear Lambda-Paramodulation in Operator Fuzzy Logic
   Liu Xuhua ................................................................ 435
Modal Theorem Proving: An Equational Viewpoint
   Yves Auffray and Patrice Enjalbert .............................. 441
Extending Reflective Architectures
   Timothy M. Lownie ................................................. 446
Maximum Entropy in Nilsson's Probabilistic Logic
   Thomas B. Kane .................................................. 452
How to Represent Opaque Sentences in First Order Logic
   Bijan Arbab ....................................................... 458
A Theorem Prover for Prioritized Circumscription
   Andrew B. Baker and Matthew L. Ginsberg ................. 463
Circumscribing Equality
   Peter K. Rathmann and Marianne Winslett .................. 468

INTELLIGENT TUTORING SYSTEMS

A Computational Framework for Granularity and its Application to Educational Diagnosis
   Jim Greer and Gordon McCalla ................................ 477
The Generation of 'Critical Problems' by Abstract Interpretations of Student Models
   Rick Evertsz ...................................................... 483
Generating Causal Explanation from a Cardiovascular Simulation
   Sarah A. Douglas and Zheng-Yang Liu ...................... 489

COGNITIVE MODELS

Focus of Control Through Goal Relationships
   Victor R. Lesser, Daniel D. Corkill, Robert C. Whitehair and Joseph A. Hernandez .......... 497
Opportunistic Memory
   Kristian J. Hammond ........................................... 504
An Adaptive Model of Decision-Making in Planning
   Gregg Collins, Lawrence Blinbaum and Bruce Kruilich .................. 511
Argumentation: Planning Other Agents' Plans
   Katia P. Sycara ................................................. 517
Combining Case-Based and Rule-Based Reasoning:
   A Heuristic Approach
   Edwina L. Rissland and David B. Skalak ........................ 524
Generating Facts From Opinions with Information Source Models
   Martin Thost .................................................... 531

Defining Salience in Case-Based Arguments
   Kevin D. Ashley ................................................. 537
Simulating Student Programmers
   James C. Spohrer and Elliot Soloway .......................... 543
The Correction Machine: Formulating Explanations for User Misconceptions
   Alex Quilici ..................................................... 550
Learning to Diagnose by Doing
   Jayant Kalagnanam and Eswaran Subrahmanian ................ 556
Focusing Attention for Observational Learning:
The Importance of Context
   Joel Martin .................................................... 562
Neural-Net Implementation of Complex Symbol-Processing in a Mental Model Approach to Syllogistic Reasoning
   John A. Barnden ............................................... 568
A Probabilistic Approach to Marker Propagation
   Dekai Wu ....................................................... 574

MACHINE LEARNING

Automated Synthesis of Constrained Generators
   Wesley Braudaway and Chris Tong ............................. 583
Using and Refining Simplifications: Explanation-Based Learning of Plans in Intractable Domains
   Steve A. Chien ................................................ 590
Towards a General Framework for Composing Disjunctive and Iterative Macro-operators
   Peter Shell and Jaime Carbonell ............................... 596
Selective Learning of Macro-operators with Perfect Causality
   Seiji Yamada and Saburo Tsuji ................................ 603
Learning Subgoal Sequences for Planning
   David Ruby and Dennis Kibler ................................ 609
A Study of Empirical Learning for an Involved Problem
   Larry Rendell .................................................. 615
A Problem Space Approach to Expert System Specification
   Gregg R. Yost and Allen Newell ................................. 621
On the Road to Automatic Knowledge Engineering
   Jitu Patel ....................................................... 628
Comparing the Conceptual Systems of Experts
   Brian R. Gaines and Mildred L. G. Shaw ...................... 633
Learning DNF by Decision Trees
   Giulia Pagallo ................................................ 639
Constructive Induction On Decision Trees
   Christopher J. Matheus and Larry A. Rendell ................ 645
Principled Constructive Induction
   Pankaj Mehra, Larry A. Rendell and Benjamin W. Wah .......... 651
Improving Efficiency by Learning Intermediate Concepts
   James Wogulis and Pat Langley ............................... 657
Coping With Uncertainty in Map Learning
   Kenneth Basye, Thomas Dean and Jeffrey Scott ............. 663
Learning Novel Domains Through Curiosity and Conjecture
Paul D. Scott and Shaul Markovitch .......................... 669

Rule Creation and Rule Learning Through Environmental Exploration
Wei-Min Shen and Herbert A. Simon ....................... 675

Abstraction in Problem Solving and Learning
Amy Unruh and Paul S. Rosenbloom ....................... 681

Acquiring Recursive Concepts with Explanation-Based Learning
Jude W. Shavlik .................................................. 688

Lazy Explanation-Based Learning: A Solution to the Intractable Theory Problem
Prasad Tadepalli ................................................. 694

Discovering Admissible Heuristics by Abstracting and Optimizing: A Transformational Approach
Jack Mostow and Armand E. Prieditis ..................... 701

Induction in an Abstraction Space: A Form of Constructive Induction
George Drastal, Gabor Czako and Stan Raatz ............ 708

Detecting and Correcting Errors of Omission After Explanation-Based Learning
Michael J. Pazzani ............................................. 713

An Integrated Characterization and Discrimination Scheme to Improve Learning Efficiency in Large Data Sets
Roberto Gemello and Franco Mana ......................... 719

The Effect of Rule Use on the Utility of Explanation-Based Learning
Raymond Mooney .............................................. 725

Eliminating Expensive Chunks by Restricting Expressiveness
Milind Tambe and Paul Rosenbloom ....................... 731

Utilization Filtering: A Method for Reducing the Inherent Harmfulness of Deductively Learned Knowledge
Shaul Markovitch and Paul D. Scott ....................... 738

Incorporating Redundant Learned Rules: A Preliminary Formal Analysis of EBL
Russell Greiner and Joseph Likuski ....................... 744

Representation and Hidden Bias II: Eliminating Defining Length Bias in Genetic Search via Shuffle Crossover
Richard A. Caruana, Larry J. Eshelman and J. David Schaffer .................. 750

Alternatives for Classifier System Credit Assignment
Gunar E. Liepins, Michael R. Hilliard, Mark Palmer and Gita Rangarajan ........... 756

Training Feedforward Neural Networks Using Genetic Algorithms
David J. Montana and Lawrence Davis ................. 762

Hierarchical Genetic Algorithms Operating on Populations of Computer Programs
John R. Koza ................................................... 768

An Experimental Comparison of Symbolic and Connectionist Learning Algorithms
Raymond Mooney, Jude Shavlik, Geoffrey Towell and Alan Gove ............. 775

An Empirical Comparison of Pattern Recognition, Neural Nets, and Machine Learning Classification Methods
Sholom M. Weiss and Ioannis Kapouleas ................. 781

An Empirical Comparison of ID3 and Backpropagation
Douglas H. Fisher and Kathleen B. McKusick ........... 788

Noise-Tolerant Instance-Based Learning Algorithms
David W. Aha and Dennis Kibler ........................ 794

Generating Better Decision Trees
Steven W. Norton .............................................. 800

Building Robust Learning Systems by Combining Induction and Optimization
David Tcheng, Bruce Lambert, Stephen C-Y Lu and Larry Rendell ............ 806

Concept Learning and the Problem of Small Disjuncts
Robert C. Holte, Liane E. Acker and Bruce W. Porter .............. 813

Chemical Analogies: Two Kinds of Explanation
Paul Thagard, Dawn M. Cohen and Keith J. Holyoak ................ 819

Noise-Tolerant Conceptual Clustering
Douglas H. Fisher .......................................... 825

Concept Formation by Incremental Conceptual Clustering
Mirsad Hadzikadic and David Y. Y. Yun ................. 831

A Critique of the Valiant Model
Wray Buntine ................................................... 837

The Minimum Description Length Principle and Its Application to Online Learning of Handprinted Characters
Qiong Gao and Ming Li ......................................... 843

Towards Friendly Concept-Learners
Luc De Raedt and Maurice Bruynooghe ................. 849
