# Table of Contents

Sources of Error in Connectionist Models of Cognitive Processes  
* S Dennis ................................................................. 1

The Evolutionary Direction of Neural Complexity  
* S G Walker & D M Alexander ........................................ 5

Technology-Independent Biasing Technique for CMOS Analogue Micropower Implementations of Neural Networks  
* P Heim, S Schultz & M A Jabri ....................................... 9

Pulse Stream Neural Networks for Applications  
* G Jackson, A Hamilton & A F Murray .............................. 13

Analogue CMOS VLSI Implementation of Cellular Neural Networks  
* K K Lai, P H W Leong & M A Jabri ................................. 17

Extensions to Cascade-Correlation Training  
* S Waugh ....................................................................... 21

Extending the CARVE Algorithm to Large Dimension Input and Higher Order Units  
* S Young & T Downs .................................................... 25

Higher Order Neural Networks - Can They Help us Optimise?  
* B Cooper ..................................................................... 29

The Role of Inhibitory Interneurones in CA1 Hippocampus Studied by Neural Network Simulation  
* A D Coop & S J Redman ................................................ 33

Towards Biological Attractor Neural Networks Using Mean-Field Theory  
* A N Burkitt ................................................................ 37

Combining Statistical Physics with VC-bounds on Generalization in Learning Systems  
* A Kowalczyk, J Szymanski & H Ferra .............................. 41

On Large Scale Simulations for Learning Curves  
* K-R Muller, M Finke, K Shuliten, N Murata & S Amari ........ 45

n-Dimensional Nonlinear Psychophysics - Intersensory Interaction as a Network at the Edge of Chaos  
* R A M Gregson ............................................................. 49

Neural Network Analysis of Psychometric Data  
* A Heathcote & P Robin .................................................. 53

A New Channel Selection System in Cochlear Implants Using Artificial Neural Networks  
* R J Wang & M A Jabri .................................................. 57

Classification of Data from Non-ideal Gas Sensors  
* B Naidoo, D C Levy, G A Bell & D Barnett ....................... 61
Financial Time-Series Prediction using Neural Networks: A Case Study for the TOPIX Data
T Jasic & H L Poh ................................................................. 65

Spike and Wave Discharge of Primary Generalised Epilepsy: Excess Excitability or Impaired Inhibition?
A Medvedev................................................................. 69

A Complementary Framework in Linguistic Reasoning
S W K Chan & J Franklin.................................................. 73

Intrinsic versus Extrinsic Representations of Relations Using Neural Networks
J Mccredden................................................................. 77

Parallels in Electro-cortical Response and Hidden Unit Space during Symmetry Detection
C Latimer, H Beh & W Joung............................................ 82

Translating Text to Australian Phonemes Using a Set of Artificial Neural Networks
J Doman, T Hendtlass & U Thein-Tun.................................. 86

Boundary Detection Using a Modified Hopfield Neural Network
Y Zhu & H Yan ............................................................. 90

Face Normalisation and Recognition Using Low Frequency Gabor Jets and Neural Networks
E Dunstone ................................................................. 94

Stability and Bifurcations in an Associative Memory Network
C M Thomas, W G Gibson & J Robinson............................. 98

Self-consistent Signal-to-Noise Analysis of Attractor Neural Networks
A N Burkitt .............................................................. 102

Decision Region Approximation
K Blackmore, R C Williamson & I M Y Mareels.................. 106

Edge-of-Chaos Dynamics in Recursively Modular Neural Networks
D M Alexander & G Globus ............................................ 110

A Statistical Mechanical Analysis of a Neural Ensemble
A Coster................................................................. 114

A Method for Mapping Neuro-Computing Simulators on Parallel Computers
I Z Milosavljevic & M A Jabri.......................................... 118

A Dynamic Neural Network Mechanism for Solving Belief Conflict in Distributed Expert Systems
M Zhang & C Zhang........................................................ 122

The Delaunay Cluster Constructive Algorithm
S Young................................................................. 126

Error Functions and Conjugate Gradient Back Propagation
R Lister & J V Stone.......................................................... 130
Dimensional Reduction for Visualisation
R Beak & O Harvey ......................................................... 134

A Modified Genetic Algorithm Applied to Neural Network Design
J R Podlena & T Hendtlass.............................................. 138

Stability of Learning in Classes of Recurrent and Feedforward Networks
W H Wilson.................................................................... 142

Statistical Modelling versus Neural Networks in Financial Decision Making: Post Apartheid South African Empirical Evidence
R J Van Eyden, P W C de Wit & J J L Cronje.......................... 146

Using Neural networks in Forecasting Electricity Load
M P Arnold, M Balce, G Holdstock & M A Jabri....................... 148

Baked Product Classification with the Use of a Self-Organising Map
T R Chaudhuri, J C-H Yeh, L G C Hamey & C T Westcott............. 152

Pre-processing of Optical Signals with Help from Neural Networks
B-H Tan, A Wahab & E-C Tan............................................ 156

Classifying Dry Sclerophyll Forest from Augmented Satellite Data: Comparing Neural Network, Decision Tree & Maximum Likelihood
L K Milne, T D Gedeon & A K Skidmore.................................. 160

Estimation of Phase Parameters in 1-D FT-NMR Spectroscopy
R Suna, K Berns & K Heimannsfeld.................................... 164

The Effects of Lateral Inhibition on Learning Speed and Precision of a Self-Organizing Feature Map
D Merkl......................................................................... 168

A Prototype System for Off-Line Signature Verification Using Multilayered Feedforward Neural Networks
R K Abbas & V Ciesielski.................................................. 172

AI, ANN and Image Matching/Fusion
S M Vajdic, A Bouzerdoun, M J Brooks, A R Downing & H E Katz ................................................................. 177

Estimating the Height and Width of Integrated Circuit Building Blocks from the Schematics
X Q Li & M A Jabri .......................................................... 181

Feasibility of Incremental Learning in Biologically Plausible Networks
J M Hogan & J Diedrich.................................................. 185

The Sample Complexity of Neural Network Learning with Discrete Inputs
P L Bartlett & R C Williamson........................................ 189

Using Sequential Likelihood for Selecting Neural Network Structures
M Hulme........................................................................ 193

The Structure of Neural Network Error Surfaces
L G C Hamey.................................................................... 197

Efficient Agnostic Learning of Neural Networks with Bounded Fan-In
W S Lee, P L Bartlett & R C Williamson................................. 201

ACNN'95 xi
MISD Parallel Image Encoding and Processing Using a Neural Network
E Dunstone & J Gray................................................................. 205

Training Recurrent Neural Networks with Complex Neuron and Connection Types
M P Arnold & M A Jabri.......................................................... 209

Using RULEX to Insert and Extract Knowledge from a Constrained Error Backpropagation MLP
R Andrews & S Geva............................................................... 213

A Reinforcement Learning Exploration Strategy based on Ant Foraging Mechanisms
L R Leerink, S R Schultz & M A Jabri.......................................... 217

A Two-stage Neural Network Learning Method for Fusing Disparate Data Modalities some of which are Scarce
B R Lederer, B S Thornton, K R McCloy & C Trengove ................. 221

Recognition of Two Dimensional Figures using Hopfield-Amari Neural Networks
A M N Fu, H Yan & M G Sutters............................................... 225

Neural Network Function Evaluation and the Sigmoid Prime Offset
A Adams & C Lewis.................................................................. 229

A Neural Network Model for Transfer of Prior Training
E S Dunstone & P O Ogunbona.................................................. 233

A Neural Model of Speed and Accuracy
A Heathcote............................................................................. 237

Training RBF Networks for Model Reference Adaptive Control of Unknown Plants
M Bahrami............................................................................. 241

Synergetic Mugshot Recognition
D Rees & H Talhami................................................................. 245

An MPSK/MQAM Demodulator Using Adaptive Density Mapping Neural Networks
J T Hefferan & S Reisenfeld...................................................... 249

Whole Word Recognition using probabilistic Neural Networks
D Lau & R Thomas................................................................ 253

Image Compression using Neural Networks
A Eisenberg & J Franklin.......................................................... 257

Arabic Character Recognition with Neural Networks
H M M Hosseini & A Bouzerdoun............................................. 261

Application of Continually Online Trained Neural Networks to Adaptive Induction Motor Identification and Control
B Burton, R G Harley, J L Rodgerson & D C Levy...................... 265

Neural Network Constructed Templates for the Recognition of Cyclones
S Hayes & V Ciesielski............................................................ 269
A Multi-stage Color Perception Model Learned by a Back-Propagation Neural Network
N Liu & H Yan ................................................................................................................................. 272

Performance Analysis of Kohonen Self-Organising Feature Maps Compared with Linear and Non-linear Dimensionality Reduction Techniques
O de Vel, S Li & D Coomans ........................................................................................................... 276
