Second European Symposium on
Aerothermodynamics for Space Vehicles

Proceedings

ESTEC, Noordwijk, The Netherlands
21–25 November 1994

Organised by:
ESA, INRIA, GAMNI/MAI
Contents

PREFACE
W. Berry xi

SESSION 1: OPENING
Chairman: W. Berry, ESA/ESTEC, The Netherlands

OPENING ADDRESS
M. Le Fèvre 3

Aerothermodynamics in Europe: achievements and challenges
J. Muylaert & W. Berry 5

SESSION 2: CONFIGURATION 1
Chairman: P. Sacher, Daimler-Benz Aerospace, Germany

Huygens probe: aerodynamic and aerothermodynamic design
M. Baillion & G. Taquin 15

Aerodynamic study of a reusable rocket TSTO: TARANIS
T. Bonnefond & F. Deneu 23

A hypersonic flowfield around a reentry body including detailed base flow
K. Murakami & T. Fujiwara 29

Aerodynamic off-design behaviour of integrated waveriders from take-off up to hypersonic flight
Th. Eggers &al 35

Aerodynamic characterisation of the Carina re-entry module in the low supersonic regimes
M. SolaZZO, A. Sansone & P. Gasbarri 41

SESSION 3: CFD 1
Chairman: R. Schwane, ESA/ESTEC, The Netherlands

Numerical study of fin-body interference effects at hypersonic speeds
O.R. Tutty &al 51

Navier Stokes multiblock calculations for high speed aerothermodynamics
P. Leyland, M.C. Bogstad & J.B. Vos 57

Rarefied gas flow simulation: a review
F. Coron, J.K. Harvey & J.-C. Lengrand 67

Computation of non-winged vehicle aerodynamics in the low supersonic range
S. Menne 73

Hypersonic computation of control devices using the FLU3M solver
J. Oswald, A. Demargne & J.M. Bousquet 79
SESSION 4: CONFIGURATION 2
Chairman: G. Durand, ESA/CNES, France

CFD-based design of the elevons of the Hermes spacecraft
P. Perrier & al

Attachment heating on the winglet of winged reentry vehicles
U. Hermann, R. Radespiel & J.M.A. Longo

A fundamental study on aerodynamic heating phenomena in the interaction region between main rocket and SRB
S. Aso & S. Maekawa

Comparison of DSMC and Navier-Stokes calculations for the reentry flow past a hyperboloid-flare configuration
F. Bergemann & G. Brenner

The similarity method for solving three-dimensional super- and hypersonic viscous flows over blunted bodies
I.G. Brykina

Hypersonic jet control effectiveness
D. Kumar, J.L. Stollery & A.J. Smith

SESSION 5: CFD 2
Chairman: W. Kordulla, DLR, Germany

A Newton-GMRES method for the parallel Navier-Stokes equations
J. Häuser, M. Spel & J.M. Muylaert

URANUS/CVCV-model validation by means of thermo-chemical nonequilibrium nozzle airflow calculations
O. Knab, H.-H. Fröhau & E.W. Messerschmid

A simplified approach to the simulation of the aerodynamics in Scirocco plasma wind tunnel
S. Borrelli, A. Schettino & M. Mattei

3D parallel multi-blocks thermo-chemical nonequilibrium simulation with a PNS solver
J.-V. Hachemin & J.-L. Vérant

Comparison on thermal non-equilibrium flow calculations on the HALIS geometry for the HEG windtunnel flow conditions
M.-P. Laclerc & al

New slip model for the calculation of air flows in chemical and thermal nonequilibrium
A. Daiß, H.-H. Fröhau & E.W. Messerschmid

SESSION 6: INVITED PAPER
Chairman: W. Berry, ESA/ESTEC, The Netherlands

Status of hypersonic testing capabilities in Europe
J.F. Wendt & J.M. Muylaert
SESSION 7: GAS DYNAMICS 1
Chairman: J.K. Harvey, Imperial College, UK

Implications of 3-D transition mechanisms on the performances of space vehicles
D.I.A. Poll

CN emission measurements in Titan radiative environment
L. Labracherie, M. Billiotte & L. Houas

About effects of mean flow inaccuracy, wall temperature, bluntness and entropy layer on
stability and transition of hypersonic flows
E. Kufner & U. Dallmann

Radiation from an ablative shock layer around a hypersonic flight model
K. Komurasaki, S. Yano & T. Fujiwara

Computation of high velocity 2D-axisymmetric re-entry flows with consideration of radiation
R.D. Kay &al

Laminar turbulent transition at hypersonic speeds: the effects of nose blunting
M.A. Zanchetta & R. Hillier

SESSION 8: EXPERIMENTS
Chairman: P.G. Bakker, TU Delft, The Netherlands

Heat flux and pressure measurements on Hermes at high enthalpy conditions in HEG
A. Le Bozec &al

Spacecraft recovery systems. Status and recommendations
F. Vergnolle, J. Moulin & K.-F. Doherr

Hermes first force measurement in ONERA-F4 wind tunnel
A. Bugeau & E. Castan

Investigation of the oxidation behaviour of thermal protection materials supported by mass
spectrometry
P. Dabala, G. Hilfer & M. Auweter-Kurtz

Goertler vortices in hypersonic wedge flow
G. Cardone &al

High temperature flight test segmented fluxmeter
C. Duché &al

SESSION 9: INVITED PAPERS
Chairman: J. Muylaert, ESA/ESTEC, The Netherlands

Importance of real gas effects in entry technology
G.S. Deiwert

OREX flight – quick report and lessons learned
Y. Inouye
SESSION 10: GAS DYNAMICS 2
Chairman: J.B. Vos, EPFL, Switzerland

Simulation of chemical reacting jet flow fields in aerospace applications
   M.A. Galls & al
281

On the coupling of non-equilibrium vibrational kinetics and dissociation-recombination processes in the boundary layer surrounding an hypersonic reentry vehicle
   I. Armenise, M. Capitelli and C. Gorse
287

Vibration-dissociation coupling in high temperature nonequilibrium flows
   J.G. Mélans & al
293

The structure of the relaxation zone behind shock waves in the reacting gas flows
   E.A. Nagnibeda
299

Modelling of surface reactions in hypersonic re-entry flow fields
   O. Deutschmann, U. Riedel & J. Warnatz
305

Modelling gas/surface interaction processes of ablating wall boundaries associated with planetary entry
   T.P. Roberts
311

SESSION 11: FACILITIES
Chairman: G. Eitelberg, DLR, Germany

Development and code evaluation studies in hypervelocity flows in the lens facility
   M.S. Holden
319

Reentry simulation within an induction heated plasma wind tunnel
   S. Laure & al
335

Operation and development of the TCM2, free-piston hypersonic facility in Marseille
   M.-P. Dumitrescu
341

A new test facility for the development of thermal protection materials for re-entry vehicles
   J. Lhernould & E. Mariage
345

Supersonic plasma jets device for testing spacecraft materials
   V. Lago & al
349

Developments at the arc heated facility LBK of DLR:
   M. Büscher & al
357

SESSION 12: INVITED PAPERS
Chairman: J. Muylaert, ESA/ESTEC, The Netherlands

A perspective on computational aerothermodynamics: current modelling difficulties
   G.V. Candler
365

Uncertainties in the numerical prediction of hypersonic flows
   M. Pandolfi
373
SESSION 13: GAS DYNAMICS 3  
Chairman: G. Russo, CIRA, Italy

Nonequilibrium flow expansion experiment around a blunted cone
D. Kastell, T.J. Horvath & G. Eitelberg  

Aerodynamic modelling of hypersonic erosive reentry flows
A. Hulin & E. Znaty  

Real-gas effects over hypersonic blunted body at nonuniform freestream conditions
S.V. Zhluktov & S.V. Utyuzhnikov  

Experiment-modelling comparison in a partially ionised nitrogen plasma jet and boundary layer
A. Bourdon, P. Domingo & P. Vervisch  

The kinetics of the recombination of nitrogen atoms on high-temperature reusable surface installation in hypersonic thermochemical non-equilibrium flows
O. N. Suslov & G.A. Tirskiy  

Inviscid shock layer analysis during the Martian atmospheric entry. Experimental investigation of CO₂ chemistry
F. Mazoue & A.A. Chikhaoui

SESSION 14: VALIDATION 1 & FLIGHT TESTING  
Chairman: J. Muylaert, ESA/ESTEC, The Netherlands

Experimental planet entry simulation within a plasma wind tunnel
M. Auweter-Kurtz, S. Laure & W. Röck  

High altitude free flight experiments and instrumentation developed for Brem-Sat and Express capsule
G. Koppenwallner, D. Johannsmeyer & R. Müller-Eigner  

Measurements on the ELAC-configuration at mach 7
H. Olivier, J. Schulte-Rödding & H. Gröning  

LIF measurements in the wake of a blunt body in HEG
M. Rosenhauer & al  

Catalycity measurements on metallic and SiC material surfaces, in a pulsed plasma reactor
F. Nguyen-Xuan &al  

Atmospheric reentry demonstrator (ARD): a flight experiment for technology qualification within the European Manned Space Transportation Programme (MSTP)
Ch. Cazaux, Ph. Watillon & G. Durand

SESSION 15: INVITED PAPER  
Chairman: W. Berry, ESA/ESTEC, The Netherlands

Air-breathing aerospace plane development essential: hypersonic propulsion flight tests
U.B. Mehta
SESSION 16: VALIDATION 2
Chairman: H. Hollanders, Aerospatiale, France

Leading edge bluntness effects on laminar-turbulent boundary layer transition on a cooled flat plate at mach 7
K. Heffner & D. Arnal

Analysis of nonequilibrium flow calculations and experimental results around a Hyperboloid flare configuration
Ph. Sagnier, V. Joly & C. Marmignon

Experimental and numerical analysis of a blunt body configuration in T5 and HEG
V. Bellucci & al

Numerical investigation of shock-shock interactions on a swept cylinder
N. Duquesne & T. Alziary de Roquefort

Validation of the conical flow approximation about the model of a wing/fuselage junction in high speed flow
S. Zemsch & G. Degrez

Experimental and numerical investigation of the high-supersonic flow around an axi-symmetric blunt-cylinder-flare model
E.M. Houtman, W.J. Bannink & B.H. Timmerman

SESSION 17: PROPULSION
Chairman: W. Berry, ESA/ESTEC, The Netherlands

An original concept of hypersonic facilities: the adiabatic compression wind tunnel (A.C.W.T.)
A. Chevalier & D. Piton

Numerical flowfield analysis of advanced rocket nozzles
G. Hagemann, G. Krülle & K. Hannemann

Numerical study of nozzle flow instabilities
F. Nasuti & M. Onofri

High velocity flows over symmetric and asymmetric intake-type configurations
D. D’Ambrosio & R. Marsilio

Experiment and computation of kinetic heating for two basic test flows
S. Soltani & al

CFD for scramjet inlets
F. Gaible, P. Garnero & S. Keghian
WORKSHOP INVITED PAPERS

Recent progress in hypersonics: the ELAC configuration
E. Krause & A. Henze

Progress in low enthalpy hypersonic wind tunnel testing
T. Alziary de Rochefort

The aerothermodynamic simulation in sub- and supersonic high-enthalpy jets: experiment and theory
A.F. Kolesnikov

Aerothermodynamic data base from high enthalpy facilities
J.A. Lordi

LATE PAPER

Major lessons learned in hypersonic design of Hermes
P. Perner
