DYNAMIC
SYSTEMS AND
CONTROL
1994

VOLUME 2

presented at
1994 International Mechanical Engineering Congress and Exposition
Chicago, Illinois
November 6-11, 1994

sponsored by
The Dynamic Systems and Control Division, ASME

edited by
Clark J. Radcliffe
Michigan State University
Experimental Studies in Disturbance Rejection
Sanjay I. Mistry, Randal J. Hassler, and Satish S. Nair .......................... 471
Fuzzy Decision Making in Variable-Structure Control Systems
Jianhua Gu and Clarence W. de Silva ............................................. 483
Adaptive Fuzzy Logic Depth Controller for Variable Buoyancy System of
Autonomous Underwater Vehicles
Min Xu and S. M. Smith .................................................................. 493

NEURAL NETWORKS
A New Method of Designing Artificial Neural Network for Engineering Monitoring
and Diagnosis
Yuedong Chen and R. Du .................................................................. 499
Determination of Probability Density Function Using Radial Basis Function Neural
Networks
Kimberly A. Rosenberry and Larry E. Banta ........................................... 507
Model-Reference Adaptive Control Using Fourier Series Neural Networks
Chaoying Zhu and Frank W. Paul ...................................................... 543
On the Study of the Multilayer Neural Networks and Kalman Filtering for System
Identification
Kang-Ning Lou and Ronald A. Perez .................................................. 547
A Neural Network Controller for Force Control in End Milling Operations
Q. Xu, K. Krishnamurthy, W. Lu, and B. McMillin ............................... 563

VOLUME 2

ADVANCES IN DESIGN AND ANALYSIS OF FLUID POWER CONTROL
COMPONENTS AND SYSTEMS
Determining the Stability of a Pneumatic Turbine Speed Control System Using a
Mechanistic Model
Eric R. Upchurch and Hung V. Vu ..................................................... 573
A Prototype Diaphragm-Disc Electrohydraulic Pilot Valve
Y. Sun and G. A. Parker .................................................................. 587
Design and Development of a High Torque Electro-Hydro-Mechanical Stepping
Motor
Ngo Sy Loc, B. Sahay, and S. K. Chaudhary ........................................... 595
Analysis of a Fluid Thermal Control System
V. Parameswaran .............................................................................. 603
Numerical Simulation of Unsteady Incompressible 3D Turbulent Flow in Fluid
Couplings With Inclined Blades
L. Bai, H. Blomerius, N. K. Mitra, and M. Fiebig .................................... 609

AUTOMATED MODELING: MODEL SYNTHESIS ALGORITHMS
Introduction
Jeffrey L. Stein ............................................................................. 617
Automating the Design of Dynamics Systems
Ashraf A. Zeid and James L. Overholt ................................................. 619
Development of Proper Models of Hybrid Systems
John B. Ferris, Jeffrey L. Stein, and Michael M. Bernitsas ....................... 629
Screw-Vector Bond Graphs for the Kinestatic and Dynamic Modeling of Multibody
Systems
B. M. Maschke, C. Bidard, and A. J. van der Schaft ................................ 637
Bond Graph Modeling and Parameter Identification of a Heat Exchanger

B. M. Maschke and P. Chantre

First-Order Models of the Gas Transport in Multi-Zone Ventilation Systems

Clifford C. Federspiel

MICRO-MECHANICAL SYSTEMS

Modeling and Analysis

Finite Element and Analytical Modeling of a Surface-Driven Rotary Electrostatic Micromotor

Balkrishna C. Rao, Robert X. Gao, Christopher L. Rambin, Ravindran Kuppusamy, and Robert O. Warrington

A New Design for Suspension of Linear Microactuators

L. Saggere, Sridhar Kota, and S. B. Crary

Strategies for Systematic Synthesis of Compliant MEMS

G. K. Ananthasuresh, Sridhar Kota, and Noboru Kikuchi

Thermal Analysis of a Bistable Microactuator

Yao-Joe Yang, Chang-Jin Kim, Hirotsugu Matoba, and Richard S. Muller

Stability of Integrated Force Arrays

Scott Goodwin-Johansson, James Jacobson, and Stephen Bobbio

MICROSENSORS AND MICROACTUATORS

Metal Microbridges to Investigate Quantum Fluctuation Forces

Loren E. St. Clair and G. Jordon Maclay

A Silicon Force Sensor in a Flexible Package

David J. Beebe, Arthur S. Hsieh, Denice D. Denton, and Robert G. Radwin

Design and Development of a Piezoelectric Microactuator Building Block for Deflection Improvement

Diann Brei

Thin Film Conductive Polymer for Microactuator and Micromuscle Applications

Abraham P. Lee, Keith C. Hong, James Trevino, and M. Allen Northrup

Fabrication of an Electrostatic Actuator and Passive Valves With $p^+$ Diaphragms for Micropumps

S. S. Yang, E. H. Yang, S. Y. Kim, J. D. Seo, and S. H. Yoo

FABRICATION AND SYSTEMS

Development of Optical Devices Using MEMS Technology

Victor White, Reza Ghodssi, Sateesh Bajikar, Greg Fish, Denice D. Denton, and Leon McCaughan

Towards an Articulated Silicon Microrobot

Richard Yeh, Ezekiel Kruglick, and Kristofer S. J. Pister

Analysis and Fabrication of a Biological Cell Fusion Device Using Dielectrophoretic Force

Sang-Wook Lee, Jung-Hoon Choi, Yong-Kweon Kim, and Ho-Seong Kim

Silicon-Micromachined Cultured Neuron Probes for In Vivo Studies of Neural Networks

Svetlana Tatic-Lucic, Yu-Chong Tai, John A. Wright, and Jerome Pine

Design, Fabrication and Testing of Silicon Microgimbals for Super-Compact Rigid Disk Drives

Viktoria Temesvary, Shuyun Wu, Wen H. Hsieh, Yu-Chong Tai, and Denny K. Miu
MECHATRONICS FOR MANUFACTURING

Motion Devices and Control
A High Precision Torque Control of a Self Magnetically-Levitated Six Degree-of-Freedom Variable-Reluctance Spherical Motor
Zhi Zhou and Kok-Meng Lee .......................................................... 775

Hybrid Motion Control of a Tracked Mobile Robot
Zhejun Fan, Yoram Koren, and David Wehe .................................... 781

X-Y Microstage With Maneuverable Kinematic Coupling Mechanism
James B. Taylor and Jay F. Tu .................................................. 789

On the Practical Implementation of Time-Optimal Control for Robotic Manipulators
H. Chang, Z. Shiller, and V. Wong ........................................... 797

Adaptive and Learning Control
Force and Position Control of Robot Manipulators: Learning Control Approach
Doyoung Jeon and Masayoshi Tomizuka ....................................... 805

Progressive Learning: A Scheduled Excitation Method for Stable, Successful Learning
Boo-Ho Yang and Haruhiko Asada ........................................... 811

Real-Time Estimation of Solder Paste Properties for Adaptive Printing Control
Daniel Braunstein and Haruhiko Asada ...................................... 819

Active Thermal Preload Regulation for Machine Tool Spindles With Rolling Element Bearings
Jay F. Tu and Jeffrey L. Stein .............................................. 827

Thermal Modeling and Adaptive Control of Timeshared and Scanned Torch Welding
Charalabos C. Doumanidis and N. Fourligkas .............................. 835

Control and Monitoring of Manufacturing Processes With Video Demonstration of Research Results
Determination of a Dynamic Grinding Model
Stephen J. Ludwick, Hodge E. Jenkins, and Thomas R. Kurfess .......... 843

Design and Control of a Multiple Degree-of-Freedom Haptic Interface
Lonnie J. Love and Wayne Book ......................................... 851

Force-Guided Robotic Assembly Using Tuned Dither and Recursive Parameter Estimation
Susan L. Ipri and Haruhiko Asada ........................................ 857

Development of a Fast Tool Servo for Variable-Depth-of-Cut Machining
Reed D. Hanson and Tsu-Chin Tsao ...................................... 863

Initial Experiments in High Precision Motion Control Using CMAC Learning Control Algorithm
Gary A. Larsen, Sang S. Ku, and Sabri Cetinkunt .......................... 873

Issues in Precision Motion Control and Applications in Manufacturing Nanometric Motion Control of a Traction Drive
Paul I. Ro, Ganesh Rao, and Quan Ma .................................... 879

Friction Compensation in Feed Drive Systems Using an Adaptive Fuzzy Logic Control
Sungchul Jee and Yoram Koren ........................................... 885

Multi-Axis Contour Tracking: A Receding Time Horizon Linear Quadratic Optimal Control Approach
Robert J. McNab and Tsu-Chin Tsao ..................................... 895

Robust Digital Control Design for High Performance Motion Control Systems
Addisu Tesfaye, Masayoshi Tomizuka, and Ho Seong Lee ............ 903

Development of a High Speed Inspection System for Prismatic Metallic Parts
Christopher T. Gallagher and Thomas R. Kurfess ..................... 909
Intelligent Control Applications in Manufacturing Processes
Material Structure and Properties Distribution Control in Scan Welding
Charalabos C. Doumanidis ................................................................. 915
Low Speed Joint Motion Control in the Presence of Stick-Slip
Bapiraju Surampudi, Reza Langari, and Kanishka Desilva .................... 923
A Neuro-Fuzzy System for Tool Condition Monitoring in Metal Cutting
Omez S. Masina and Reza Langari .................................................. 931
Design and Control Integration for Magnetic Bearing Systems:
Part I - Modeling and Performance Limitation
T.-J. Yeh and K. Youcef-Toumi ...................................................... 939
Design and Control Integration for Magnetic Bearing Systems:
Part II - Loop-Transfer-Recovery-Based Design Methodology
T.-J. Yeh and K. Youcef-Toumi ...................................................... 945
Real Time Control of Manufacturing Processes
Real-Time Five-Axis Interpolator for Machining Ruled Surfaces
Rong-Shine Lin and Yoram Koren .................................................. 951
Statistical Metrology
Thomas R. Kurfess, David L. Banks, and Lara J. Wolfson ...................... 961
Statistical Methods for On-Line Fault Detection in Press-Working Applications
John E. Seem and Kevin D. Knussmann .......................................... 969
A Digital Robust Controller for Cutting Force Control in the End Milling Process
Stephen J. Rober, Yung C. Shin, and Osita D. I. Nwokah ...................... 977
Monitoring and Diagnostics Issues in Dynamic Systems and Manufacturing
Feedforward Neural Networks for Fault Diagnosis and Severity Assessment of a Screw Compressor
Taehee Kim and C. James Li ............................................................ 987
Non-Linear ARX Model Based Kullback Index for Fault Detection of a Screw Compressor
Y. C. Jeon and C. James Li ............................................................. 995
A Robust Error Correction Method for Multi-Axis Machines
J. Mou and C. R. Liu ....................................................................... 1011
Tool Condition Monitoring in Machining by Fuzzy Neural Networks
S. Li and M. A. Elbestawi .............................................................. 1019
Minimization of the Condition Number for Monitoring and Control
Kunsoo Huh and Jeffrey L. Stein ..................................................... 1035

AUTOMATIC CONTROL TEXTBOOKS FOR ME UNDERGRADUATE EDUCATION
Introduction
Thomas Albarts and David Auslander ............................................... 1043
Modern Control Systems Education
Richard C. Dorf and Robert H. Bishop .......................................... 1045
A View on Undergraduate Mechanical Engineering Controls Education
Katsuhiko Ogata ............................................................................. 1047
Panel Discussion on Automatic Control Textbooks for Mechanical Engineering
Undergrads
J. Van de Vegte ............................................................................. 1049
Mechanical Engineering Control Education
Björn Wittenmark ........................................................................ 1051
Feedback Control of Dynamic Systems, 3rd Edition
Gene Franklin, J. David Powell, and Abbas Emami-Naeini ................... 1053
Control Applications
Scan Welding: Distributed Control of Material Structure and Properties
Charalabos C. Doumanidis ............................................................. 1055
