Proceedings of the
A.C. Aitken Centenary
Conference

Otago Conference Series No. 5

Edited by
Laimonis Kavalieris, Fred C. Lam,
Leigh A. Roberts and John A. Shanks

University of Otago Press
Dunedin
Contents

Foreword ................................................................. v

Historical

P.C. Fenton
A.C. Aitken in Dunedin ........................................... 3

Garry J. Tee
Alexander Craig Aitken: 1895 - 1967 ......................... 11

W. Ledermann
A.C. Aitken: His contribution to pure mathematics .......... 21

Elmer G. Rees
Mathematics in Edinburgh ........................................ 29

Robin K. Milne
A.C. Aitken and his research students: Investigations
on the structure of bivariate distributions .................... 37

General

R. Aripin
Serial correlation among the combined forecast errors of
interpolated missing values in time series .................... 47

Raghunath Arnab
Strategies of sampling in randomized response trials .......... 55

Andrew Balemi and Alan Lee
On the mean squared error of the sandwich estimator in
Liang-Zeger estimation ........................................... 67

Austina S.-S. Clark
The characteristics of the weighting matrix of
the Gleeson-Cullis model ........................................ 75

Sue Clarke and John Shepherd
Projecting actuarial education .................................. 83

James M. Curran
Statistical analysis of forensic glass evidence: A review .... 95

David C.M. Dickson
Approximate calculation of moments of
ruin related distributions ...................................... 103

T.D. Downs
Random planes and special matrix forms ..................... 111
