Structural Acoustics, Scattering and Propagation

International Conference on Theoretical and Computational Acoustics

Volume 1

Mystic Hilton, Mystic, Connecticut, USA; 5 – 9 July 1993

Editors

John E Ffowcs Williams
University of Cambridge

Ding Lee
Naval Undersea Warfare Center/Yale University

Allan D Pierce
Boston University
CONTENTS

Volume I: Structural Acoustics, Scattering and Propagation

Preface v

Gateway Solutions: Advanced Computational Capability for the Future in Acoustics
   E. L. Messere 1

Computational Aeroacoustics
   J. E. Ffowcs Williams 13

Line Source Singularity in the Wave Equation and Its Removal by Quadrupole Sources — A Supersonic Propeller Noise Problem
   F. Farassat and M. K. Myers 29

Sound Field in a Tunnel Generated by Traveling of a High-Speed Train
   N. Sugimoto 45

Acoustic Scattering by Elastic Shells that have Multiple Massive Internal Components Attached by Compliant Mounts
   G. C. Gaunaurd and H. Huang 57

Waves on Elastic Shells of Conical Shape
   Y. P. Guo 73

Elasto-hydrodynamic Wave Dispersion Predictions for Circular Cylindrical Shells Immersed in Fluid
   M. G. Manley 95

A Boundary Integral Equation Approach to Acoustic Radiation from an Array of Closely Spaced Spherical Shells
   R. B. Evans and M. P. Fecher 109

The Prediction of Pseudo-Stoneley Resonances via Proper Fluid Loading of Thin Shell Theories
   C. E. Dean and M. F. Werby 119

Signal Processing of Ideal Acoustic Echoes from Submerged Shells in the Time-Frequency Domain via Wigner-Type Distributions
   G. C. Gaunaurd and H. C. Strifors 127
The Effect of an Internal Bulkhead on the Acoustic Radiation from a Finite, Fluid-Loaded Cylindrical Shell: A Finite Element Analysis

D. J. McDowell, Jr.

The Resonances of Finite-Length Elastic Cylinders Excited by Sound Scattering

Radiation of Sound from Two Coaxial Cylindrical Waveguides; A Matrix Wiener–Hopf Formulation

I. D. Abrahams and J. B. Lawrie

A Numerical Evaluation of the Sound Field Scattered by a Finite Fluid-Loaded Cylindrical Elastic Shell

B. Zhang and I. D. Abrahams

Acoustic Coupling to Curved Shells: An Asymptotic Theory

D. A. Rebinsky and A. N. Norris

Caustic Formation from a Point Source in a Shear Layer Over an Elastic Surface; A Model for the Suppression of Coherent Fluid Structures?

I. D. Abrahams, G. A. Kriegsmann, and E. L. Reiss

The Reconstruction of Solid Grain Structure Using Invariant Imbedding and the Green Function Method

Z. M. Sun and G. Wickham

Scattering of Sound Waves by Arbitrarily Shaped Obstacles

R. T. Ling

Approaches to Bottom Scattering in Acoustic Propagation Modeling

R. D. Purrington

Theoretical Modeling of Low Frequency Acoustic Scattering from Subsurface Bubble Structures

D. Wurmser and R. F. Gragg

Surface Scattering: The Role of Turbulent Transport of Microbubbles

L. J. Kulbago and K. E. Gilbert

A Comparative Study of the Performance of the Spherical and Spheroidal Coordinate T-Matrix Formalisms with Thin Shells

R. H. Hackman and M. F. Werby
Regularization Methods Applied to Acoustic Holography
* N. Seghouani and C. Nouals

Quasi-Newton Method for Multi-dimensional Inverse Scattering Problem
* S. Gutman and M. Klibanov

An Assessment of High-Resolution Matched Field Processing Based on Model-Generated Shallow-Water Acoustic Wave Fields
* R. McGirr and C. Burkhalter

Sound Fields of Moving Sources Near Impedance Surfaces
* G. Rosenhouse & N. Peled

Limit Cycles of Flow-Excited Resonators: A Describing-Function Analysis
* T. D. Mast

Acoustic Holography Using Wavelet Transform
* Z. El-Khoury and C. Nouals

Computation of Nearfield Duct Aeroacoustics
* S. Hodge

Feature Extraction and Classification of Marine Biological Species
* W. Greene and Q. Huynh

Comprehensive Acoustic Simulation/Stimulation
* H. Weinberg

Application of Non-traditional Processing Methods to Transitional and Turbulent Boundary Layer (TBL) Flow Noise
* R. A. Katz, W. L. Keith, T. A. Galib, and R. A. Handler
