Table of Contents / Table des matières

Message from President and C.E.O., IBM Canada Ltd. ........................................ viii
Message du président et directeur général, IBM Canada Ltée ................................. ix
Message from Vice-President Application Development Solutions and Director, IBM Toronto Laboratory ................................................................. x
Message du Vice-président, Solutions au développement des applications et directeur du laboratoire d'IBM à Toronto ................................................. xi
Message from Head of Research, IBM Centre for Advanced Studies, and from Head, NRC Software Engineering Laboratory .............................................. xii
Message du Chef de recherches, IBM Centre for Advanced Studies, et du Chef, Génie logiciel, CNRC ................................................................. xiv
Conference Organizers / Organisateurs de la Conférence .................................... xvi
Program Committee / Comité du programme ......................................................... xvii
Conference Proceedings Referees / Membres du jury des travaux présentés à la Conférence ................................................................. xvii
CASCON’94 Workshops / Ateliers de CASCON 1994 .............................................. xxi
CAS Project Participants / Participants aux projets du CAS .................................... xxii

Presented Papers / Mémoires présentés

Program Understanding / Apprentissage intégré des programmes

A Theory Model Core for Module Interconnection Languages ............................. 1
Thomas R. Dean and David A. Lamb, Queen’s University

Visualizing Textual Redundancy in Legacy Source ............................................... 9
J. Howard Johnson, National Research Council of Canada

Towards an Integrated Toolset for Program Understanding ............................... 19
John Mylopoulos, Martin Stanley, University of Toronto; Kenny Wong, University of Victoria; Morris Bernstein, Renato De Mori, McGill University; Graham Ewart, IBM Toronto Laboratory; Kostas Kontogiannis, Ettore Merlo, McGill University; Hausi Müller, Scott Tilley, and Marijana Tomic, University of Victoria

Applying Program Understanding Technology to IBM Product Documentation .......... 32
Graham Ewart, IBM Toronto Laboratory, and Marijana Tomic, University of Victoria

Software Engineering / Génie logiciel

An SGML-based Programming Environment for Literate Programming .................. 42
Daniel Morales-Germán, University of Waterloo

Modeling and Querying Software Repositories ...................................................... 50
Santanu Paul, University of Michigan

Loosely Integrating Tools Using the Star System .................................................... 59
Spiros Mancoridis, University of Toronto
Software Process / Procédés de développement des logiciels

David M. Raffo, Carnegie Mellon University

Eliciting Formal Models of Software Engineering Processes .......................... 82
Dirk Holtje, Nazim H. Madhavji, Tilmann Bruckhaus, and WonKook Hong, McGill University

Inspection Effectiveness in Software Development: A Neural Network Approach ............ 99
Tzvi Raz and Alan T. Young, Westlake Programming Laboratory, IBM

Automatic Translation of Process Modeling Formalisms ....................... 110
George T. Heineman, Columbia University

Distributed Computing/ Informatique répartie

Consistency Issues in Distributed Application Performance Metrics .................. 121
Jerome Rolia and Bo Lin, Carleton University

Design and Implementation of a Trader-Based Resource Management System .......... 130
A. Warren Pratten, James W. Hong, J. Michael Bennett, Michael A. Bauer, and Hanan Lutfiyya, The University of Western Ontario

Static Analysis of Multiway Synchronization ...................................... 142
Peter B. Ladkin, CRIN-CNRS & INRIA Lorraine, France, and Barbara B. Simons,
IBM Santa Teresa Laboratory

Reducing the Complexity Associated with Networked Applications / Réduire la complexité des applications de réseau

Integrating Real-Time and Partial-Order Information in Event-Data Displays ............ 157
David J. Taylor and Michael H. Coffin, University of Waterloo

Extending the RMON Matrix Group to Provide Network Layer Statistics ............. 166
Gerald A. Winters and Toby J. Teorey, University of Michigan

Foraging for Information Resources in Cyberspace: Intelligent Foraging Agent in a Distributed Network ......................................... 179
George E. Mobus, University of North Texas, and Manuel Aparicio IV, IBM Westlake Programming Laboratory

Multidatabase Systems, Spatial Database Systems, and Data Reduction / Systèmes comportant plusieurs bases de données, systèmes de bases de données spatiales et réduction des données

An Efficient Expected Cost Algorithm for Dynamic Indexing of Spatial Objects .......... 193
Gopi K. Attaluri, University of Waterloo

Schema Translation Using Structural Transformation .................................. 202
Rateb Abu-Hamdeh, James Cordy, and Patrick Martin, Queen’s University at Kingston

Storing MDBS Catalog Information in an X.500 Directory Service ...................... 216
Patrick Martin and Wendy Powley, Queen’s University at Kingston

Data Reduction Through Early Grouping ............................................. 227
W. Paul Yan and Paul Larson, University of Waterloo

Distributed MultiMedia: Enabling Technologies / Technologies clés des multimédias répartis

Distributed Multimedia Applications and Quality of Service — A Survey .................. 236
Andreas Vogel, Université de Montréal; Brigitte Kerhervé, Université du Québec;
Gregor v. Bochmann and Jan Gecsei, Université de Montréal
The Loosely-synchronous Transfer Mode ........................................ 253
  Danilo Florissi, Columbia University

Quality of Service Management Automation in Integrated Distributed Systems .......... 261
  Patricia Gomes Soares Florissi, Columbia University

High Performance Computing / Informatique haute performance

A Compiler Framework for Restructuring Data Declarations to Enhance Cache and TLB Effectiveness ........................................ 270
  David F. Bacon, Jyh-Herng Chow, Dz-ching R. Ju, Kalyan Muthukumar, and Vivek Sarkar; IBM Santa Teresa Laboratory

Automatic Decomposition in EPPP Compiler .................................... 283
  Qi Ning and Vincent Van Dongen, Centre de recherche informatique de Montréal, and Guang R. Gao, McGill University

FTL: A Multithreaded Environment for Parallel Computation ...................... 292
  Ivan Kalas, IBM Toronto Laboratory; Eshrat Arjomandi, York University; Guang R. Gao, McGill University; and Bill O’Farrell, IBM Toronto Laboratory

Object-Oriented Computing / Informatique orientée objet

Using Objects in Shared Memory for C++ Application ........................... 304
  Lenny Hon, IBM Toronto Laboratory

Testing the C Set++ Collection Class Library .................................... 314
  Daniel Hoffman and Xianhong Fang, University of Victoria

A Theory-Model Formalization of Shlaer-Mellor Object-Oriented Analysis .......... 324
  Xiaobing Zhang, Queen’s University

Visualization and User Interfaces / Visualisation et interfaces utilisateurs

Visualizing Abstract Events ....................................................... 334
  Thomas Kunz, Institut für Theoretische Informatik, Darmstadt, Germany

Computer Aided Document Engineering ........................................... 344
  G. Ken Holman, Microstar Software Ltd.

Volume Upper Bounds for 3D Graph Drawing ................................... 353
  Robert F. Cohen, Peter Eades, University of Newcastle; Tao Lin, Commonwealth Scientific and Industrial Research Organization, Australia; and Frank Ruskey, University of Victoria

A Comparison of Two Handwriting Recognizers for Pen-based Computers ............ 364
  Larry Chang and I. Scott MacKenzie, University of Guelph

Abstracts of other papers on CD-ROM / Résumés des autres mémoires sur le CD-ROM

Object-Oriented Metrics: An Overview ........................................... 372
  David Bellin, Manish Tyagi, and Maurice Tyler, North Carolina A & T State University

A Comparison of Identification Rates of Static and Animated Buttons ............... 372
  Richard C. Bodner, University of Guelph

Failure Isolation and Recovery in Composite Multidatabases ........................ 372
  Dexter P. Bradshaw, University of Waterloo

TIM: A Tool Insertion Method .................................................... 372
  Tilmann Bruckhaus, McGill University

Delivery of Electronic News: A Broadband Application .......................... 373
  F.J. Burkowski, University of Waterloo; Michael A. Shepherd, Dalhousie University; and C.R. Walters, Acadia University
Self-testing Software Probe System for Failure Detection and Diagnosis .......................... 373
Ram Chillarege, IBM Thomas J. Watson Research Center

A Technique for Automatically Organizing Software Libraries for Software Reuse .................. 374
Khuzaima S. Daudjee and Anestis A. Toptsis, York University

Translating GraphLog to SQL .......................................................... 374
Frank Ch. Eigler, IBM Centre for Advanced Studies and University of Toronto

Using Kohonen Maps to Determine Document Similarity .................................................... 374
Jennifer Farkas, Industry Canada Centre for Information Technology Innovation

Investigating Coverage-Reliability Relationship and Sensitivity of Reliability to Errors in the Operational Profile .......................................................... 375
Praerit Garg, Purdue University

Metamorphic Development of a GUI for Configuration Management ..................................... 375
Michael W. Godfrey, University of Toronto

Designing for Change .................................................................................. 375
Peter Grogono, Concordia University

On Testing of Classes in Object-Oriented Programs ............................................................... 375
Dechang Gu, Yin Zhong, and Sarwar Ali, North Carolina A & T State University

Quality of Service Verification Experiments ............................................................................ 376

Techniques and Experiences with Group Support System Implementation .............................. 376
Stephen C. Hayne, University of Calgary, and Mark Pendergast, University of Arizona

Toward Distributed Applications Management Using the OSI Management Framework ............ 376
James W. Hong, Michael J. Katchabaw, Michael A. Bauer, and Hanan Lutfiyya, The University of Western Ontario

EPPP — An Integrated Environment for Portable Parallel Programming ............................... 377
Gilles Hurteau and Vincent Van Dongen, Centre de recherche informatique de Montréal, and Guang R. Gao, McGill University

Partial Design Recovery Using Dynamic Programming ......................................................... 377
Kostas A. Kontogiannis, McGill University

Restricted Object Based Design of Event Driven Commercial Software ............................... 377
M. Krieger, University of Ottawa, and S. Lemire, National Defence Headquarters

Software Release Management: A Business Perspective ......................................................... 378
Mayuram S. Krishnan, Carnegie Mellon University

An Object Oriented Testing and Maintenance Environment .................................................. 378
David C. Kung, Jerry Gao, and Pei Hsia, University of Texas at Arlington

An Automated Internet Resource Discovery System .............................................................. 379
Kurt Lichtner, University of Waterloo

Test Case Generation for Specification-Based Software Testing .............................................. 379
Peng Lu, IBM SWS Toronto Laboratory

The Contract Approach Illustrated with a Distributed Routing Protocol ................................. 379
Mbi Makungu and Michel Barbeau, Université de Sherbrooke

Supporting Communications Infrastructure Evolution .......................................................... 380
Andrew D. Marshall, The University of Western Ontario

On The Automation of Code Generation for User Interface Models ...................................... 380
L.C.M. Nova and D.D. Cowan, University of Waterloo, and A. v. Staa and C.J.P. Lucena,
Pontificia Universidade Católica, Rio de Janeiro, Brazil
On the Experience of Using Cause-Effect Graphs for Software Specification and Test Generation. 381
   Amit Paradkar, North Carolina State University

Obstacles to Transparent Heterogeneity in a Distributed Programming Environment. 381
   Ian Parsons, University of Alberta

Modelling a Distributed Database System. 381
   Wai-Hang (Stephen) Poon, IBM Toronto Laboratory

Toward Automation of Generating Incremental Computation Mechanisms. 381
   Bambang N. Prastowo, Queen's University

OODB Support for Providing Transparent Schema Changes. 382
   Young-Gook Ra and Elke A. Rundensteiner, The University of Michigan

A Response Oriented Paradigm for Software Engineering. 382
   V. Radonjic, M. Krieger, and J-P. Corriveau, University of Ottawa

Grail: A C++ Library for Finite-State Machines and Regular Expressions. 382
   Darrell Raymond, University of Waterloo

Using the OPT Improvement Approach in the SQL/DS Development Environment. 382
   Carolyn B. Seaman, University of Maryland

Integrating Cognitive Levels into the Interface. 383
   Deborah E. Swain, University of North Carolina at Chapel Hill and IBM Software Solutions Laboratory

Enterprise: Current Status and Future Directions. 383
   D. Szafron, J. Schaeffer, P. Iglinski, I. Parsons, R. Kornelsen, and C. Morrow,
   University of Alberta

Reducing the Technical Overhead of Software Reuse. 384
   Andrew Z. Tong, Columbia University

Automatic Source-File Dependency Structure Extraction for C Programs. 384
   Vassilios Tzerpos, University of Toronto

Data Parallelism with High Performance C. 384
   Vincent Van Dongen and Christophe Bonello, Centre de recherche informatique de Montréal,
   and Guang R. Gao, McGill University

View Maintenance in Relational and Deductive Databases by Incremental Query Evaluation. 384
   Dimitra Vista, University of Toronto

Software Understanding Through Integrated Structural and Run-time Analysis. 385
   Kenny Wong, University of Victoria

A Versatile Development Process for Small to Large Projects Using IBM CMVC. 385
   Seong R. (Steve) Yu, IBM Santa Teresa Laboratory

A Formal Specification Model and Its Application in Multidatabase Systems. 385
   Jianchun Zhang, Queen's University

Authors / Auteurs 386
