Categorization of Department of Energy Spent Nuclear Fuel
Denzel L. Fillmore .............................................................. 315

Paper Summary Inventory Assessment of DOE Spent Nuclear Fuels
David G. Abbott, Alan R. Bringhurst, and Denzel L. Fillmore ..................... 320

Systems Modeling for the DOE Spent Nuclear Fuel Program
Dennis Evans, Corey Beebe, Michael Caldwell, Brett Carlsen, Gina Ban,
David Van Haaften, and Scott Gladson ....................................... 331

Management of HFIR Spent Fuel
Victoria M. Green, John M. Begovich, A. L. Lotts, and George F. Flanagan ........ 338

Review of Technologies and Alternatives for Dispositioning DOE/INEL Spent Nuclear Fuels
C. Lee Bendixsen, Arlin L. Olson, Jerry D. Christian, and Torn R. Thomas ........... 343

E2—OPERATIONAL SYSTEMS EVALUATIONS
Session Organizer: P. C. Bennett;
Session Chairs: P. C. Bennett and Dennis Price

Application of Lessons Learned Experience to Human Factor Engineering of the Planned Monitored Retrievable Storage Facility
Dan Kane, Hok Wai Kwan, and John Richardson .................................. 351

Automated Post Irradiation Handling of Spent Nuclear Fuel in PNC’s FMF-2 Facility Test Hot Cell
Mark H. Price and Thomas R. Frantz ............................................. 358

Monitored Retrievable Storage/Multi-Purpose Canister Analysis: Simulation and Economics of Automation
Phil C. Bennett and Joe B. Stringer ............................................... 363

Implementation of Spent Fuel Storage Options—A Utility Project Engineer’s Perspective
Steven M. Unikewicz ................................................................. 370

Human Factors Engineering Applications in the Testing of the Legal Weight Truck Cask Transportation System
Thomas C. Smith, Millard Peck III, and Robert A. Sealock ......................... 375

E3—UNDERGROUND MECHANICAL EXCAVATION
Session Organizer: Jaime Gonzalez;
Session Chairs: Dean Stucker and Jaime Gonzalez

A Tunnel Boring System for the Yucca Mountain Project
Steven N. Short ............................................................................. 381

Microtunneling Techniques to Form an In situ Barrier Around Existing Structures
Philip J. Coller and David G. Abbott .............................................. 386

Application of Heavy Duty Roadheaders for Underground Development of the Yucca Mountain Exploratory Study Facility
Jamal Rostami, Levent Ozdemir, and David M. Neil ................................. 395

Tunnel Boring Machine for Nuclear Waste Repository Research Project
Hans A. Janzon .............................................................................. 403
Development of a Mechanical Alcove Excavator for the Yucca Mountain Exploratory Study Facility
Erika Ronkqvist, James E. Friant, and Levent Ozdemir .............................. 411
Wilhelm J. Kogelmann ................................................................. 417

E4—MULTIPURPOSE CANISTER—TECHNICAL ASPECTS
Session Organizer: Jeffrey Williams;
Session Chairs: William R. Hollaway and Hugh Benton

Selecting the Design Basis Fuel for the Multi-Purpose Canister
Douglas A. Williamson ............................................................... 430

MPC Closure Weld Model Study
Brian J. Kruse, Joe B. Stringer, and Giles G. Childress ........................ 435

Transfer of Spent Nuclear Fuel into Multi-Purpose Canister Storage
Roger G. Wagstaff ................................................................. 444

Verification Testing of Multi-Purpose Rail Cask Impact Limiters
Charles J. Temus, Ian D. McInnes, Ken Miller, and Robert A. Johnson .... 452

Feasibility of Using MPC's for DOE Research and Production Fuel
Daryl A. Lopez and David G. Abbott ......................................... 457

The First Multipurpose Spent Fuel Container Reviewed by the U.S. Nuclear Regulatory Commission (USNRC)
Ivan F. Stuart ................................................................. 467

E5—HIGH-LEVEL NUCLEAR WASTE REPOSITORY SOURCE TERM DEVELOPMENT-I
Session Organizers: Richard C. DeKlever and William B. Simecka;
Session Chairs: Richard C. DeKlever and Albin Brandstetter

Further Development of a Source Term Model for a Repository in Unsaturated Tuff
Richard Codell and Richard Weller ............................................. 477

Robust EBS Design and Source-Term Analysis for the Partially Saturated Yucca Mountain Site
Mick Apter ................................................................. 485

Precipitation Kinetics of Radioactive Elements and Their Effect Upon Redox Conditions of the Nearfield
Hiroyasu Takase and Peter Grindrod ......................................... 491

The Efficiency of Source Terms in Performance Assessments for Salt Repositories
Dieter Buhmann, Jurgen Brenner, and Richard Storck ....................... 501

E6—REPOSITORY DESIGN CONSIDERATIONS
Session Organizer: Pierre Mousset-Jones;
Session Chairs: Jaime Gonzalez and Pierre Mousset-Jones

An Auxiliary Ventilation Design Approach for the ESF Development at Yucca Mountain
P. Mousset-Jones and F. Calizaya .............................................. 508

A Comparative Study of U.S. and Russian High-Level Waste Repository Design Concepts
Z. T. Bieniawski and E. V. Kuzmin ............................................ 515

Investigation and Design Concepts for a Nuclear Waste Repository in the Kola Peninsula of Northwest Russia
Nikolay N. Melnikov and William R. Sharp .................................. 523
Ventilation Considerations for Repository Subsurface Advanced Conceptual Design
Hang Yang and Kalyan K. Bhattacharyya ................................................................. 530
Final Storage of High Activity Waste in Spain
Aurelio Ulibarri, Fernando Huertas, and Jesús Alonso ........................................... 538

E7—HIGH LEVEL NUCLEAR WASTE REPOSITORY
SOURCE TERM DEVELOPMENT-II
Session Organizers: Kevin D. Seager and William B. Simecka;
Session Chairs: Kevin D. Seager and Hersh K. Manaktala

Exploratory Studies Facility and Potential Repository Source Term
J. D. Smith ................................................................................................................... 549
Preliminary Spent LWR Fuel Oxidation Source Term Model
R. E. Einziger ............................................................................................................. 554
Spent Fuel Characteristics Relevant to High-Level Waste (HLW) Source Term
Hersh K. Manaktala, Prasad K. Nair, and Charles G. Interrante ......................... 560
Prediction of Cladding Life in Waste Package Environments
J. Kevin McCoy and Thomas W. Doering .............................................................. 565

E8—THERMAL ISSUES IN SYSTEMS APPLICATIONS
Session Organizer: N. Barrie McLeod;
Session Chairs: Robert Boehm and Peter Gotlieb
FY93 Thermal Loading Systems Study
Steven F. Saterlie and Brent H. Thomson .............................................................. 573
Impacts of Repository Thermal Loading on System Cost
L. D. Rickertsen and W. W. Matyskiela ................................................................. 586
Evaluation of Thermo-Hydrological Performance in Support of the Thermal Loading Systems Study
Thomas A. Buscheck, John J. Nitao, and Steven F. Saterlie ................................ 592
Near-Field Thermal Calculations for Individual Waste Package Placement
Suresh Lingineni ....................................................................................................... 611
Structured Tradeoffs Preference Elicitation: Evaluating CRWMS Design and Operations
Hollister Hartman .................................................................................................... 619
Improved Thermal Source Term Generation Capability for Use in Performance Assessment and System Studies
John King and Carol Rhodes .................................................................................. 627

E9—POSTER SESSION: ENGINEERED SYSTEMS
Session Organizers and Chairs: Thomas W. Doering, and William R. Hollaway
Long-Term Effects of Neutron Absorber and Fuel Matrix Corrosion on Criticality
William G. Culbreth and Paige R. Zielinski ......................................................... 634
Potential Economic Benefits of the Yucca Mountain Project
Richard A. Babcock .................................................................................................. 642
Multi-Banner Borehole Canister Designs for a Tuff Repository
David E. James, Robert L. Skaggs, and Suneeta Mohansingh .............................. 650
Population Estimation Techniques for Routing Analysis
Shashi K. Sathisan and Anil K. Chagari ................................................................. 658
Railroad Accident Probability Model
Phillip Fanchon and H. Barry Spragins .............................................................. 666
Shielding Assessment of the TRUPACT-Series Casks for HLW Transportation
  Charles R. Hills, Vojislav Banjac, and A. Sharif Heger ........................................ 671
Calculation of $k_{\text{eff}}$ for Plutonium in High-Level Waste Packages
  Paige R. Zielinski and William G. Culbret ............................................................... 679
A Human Factors Approach to Waste Form Design
  Michael A. Rodriguez .................................................................................................... 684

**E10—GROUND SUPPORT SYSTEMS**
Session Organizer: Pierre Mousset-Jones;
Session Chairs: Levent Ozdemir and Pierre Mousset-Jones

Assessment of Rock Bolt Systems for Underground Waste Storage
  Wesley T. Leedy and Robert J. Watters ......................................................................... 691
Long Term Ground Support with Stainless Steel and Nickel Alloy Rock Bolts
  Thomas F. Shaffer, R. Winston Revie, and Anita Mandal ........................................... 696
Saline Tolerant Grout Use at a Nuclear Waste Facility
  Trevor A. Moss, Stephen H. E. Phillips, and David F. Smith ...................................... 705
Recent Advances in Precision Surveying Technology and Integrated
Deformation Analysis
  Adam Chrzanowski, W. Trevor Greening, and Anna Szostak-Chrzanowski ................. 721

**E11—CRITICALITY AND BURNUP-I**
Session Organizer: Michaele C. Brady;
Session Chairs: Michaele C. Brady and Peter Rex Thorne

Burnup Verification Using the FORK Measurement System
  Ronald I. Ewing ............................................................................................................. 732
PWR Axial Burnup Profile Database
  R. J. Cacciapouti, S. Van Volkinburg, and L. A. Hassler ........................................... 739
Effects of Axial Burnup Distributions on the Reactivity of Spent Fuel
  Theodore A. Parish ........................................................................................................ 744
Implementation of Response Function Concept for Spent Fuel Cask Analyses
  C-K Chris Wang, Jack W. Foster, and Dominique Napolitano ..................................... 752
Fitted Analytical Expressions Giving the Enrichment in U235 of a Fresh Fuel Equal to a
Spent PWR Fuel
  J. Anno ......................................................................................................................... 757

**E12—THERMAL ISSUES IN HIGH LEVEL WASTE**
Session Organizer: Steve Gianoulakis;
Session Chairs: Steve Gianoulakis and Jaime Moya

Thermal Qualification Testing of Efficient Neutron Shield Materials
  Richard H. Boonstra ....................................................................................................... 765
Experimental Heat Transfer and Fluid Flow Over Drift-Emplaced Canisters
  William G. Culbret and Satish Pattisam ..................................................................... 772
A Numerical Study of Convection Heat Transfer Within Enclosed Horizontal
Rod-Bundles
  M. Keyhani and L. Luo ................................................................................................. 780
A Comparison of Spent Fuel Shipping Cask Response to 10 CFR 71 Normal Conditions
and Realistic Hot Day Extremes
  Steven James Manson, and Steven Eric Gianoulakis ................................................... 788
E13—THERMAL/CASKS—PACKAGES
Session Organizer: Jaime Moya;
Session Chairs: Jaime Moya and Steve Gianoulakis

Thermal Finite Element Analyses of 26 Waste Package Spent Nuclear Fuel Loading Configurations
A. O. Thompson and M. J. Plinski ............................................................... 796

Simulation of Heat Transfer Around a Canister Placed Horizontally in a Drift
Samir Moujaes and Akshay Bhargava ....................................................... 801

Thermal Response of the Waste Package/MPC and EBS
Robert H. Bahney III and Thomas W. Doering ........................................ 809

Heat Transfer Effects in Vertically Emplaced High Level Nuclear Waste Container
Samir F. Moujaes and Yao M. Lei ............................................................... 816

E14—CRITICALITY AND BURNUP-II
Session Organizer: Michaele C. Brady;
Session Chairs: Cecil V. Parks and Jacques Anno

Multi-Purpose Canister Criticality Control Design Features
James R. Thornton, Kelvin J. Montague, Alan H. Wells, and Daniel A. Thomas ...... 823

The Reactivity Effects of Nuclide Buildup and Decay During Long-Term Fuel Storage
T. Suto, S. M. Bowman, and C. V. Parks .................................................. 831

Long Term Nuclear Criticality Potential in Waste Packages
Daniel A. Thomas and Thomas W. Doering ............................................. 838

Design Basis Spent Nuclear Fuel Characteristics
Peter Gottlieb and J. Kevin McCoy ......................................................... 845

Repository Criticality Safety for the DOE Spent Nuclear Fuel Program
Dennis Evans and Brian Palmer ............................................................... 852

E15—REPOSITORY THERMAL ISSUES
Session Organizer: Steve Gianoulakis;
Session Chairs: Robert Bahney III and Steve Saterly

Investigation of Stress in a Circular Tunnel Due to Overburden and Thermal Loading of Horizontally Placed 21 PWR Multi Purpose Canisters
Nadia Kandalaft-Ladkany and Richard V. Wyman .................................... 860

Implications of Waste Package Heat Output Distributions Resulting from Waste Stream Variability
John F. King, Carol J. Rhodes, and Steven F. Saterlie .................................. 868

Thermal Performance of a Depleted Uranium Shielded Storage, Transportation, and Disposal Package
S. D. Wix and H. R. Yoshimura ............................................................... 877

Site Characterization Plan Thermal Goals Reevaluation
Steven F. Saterlie and J. C. de la Garza .................................................. 882

The Application of Thermal Rock Bolts in the Thermal Design of a Nuclear Waste Repository
George Danko ......................................................................................... 890

Heat Transfer Modeling in Burial Sites Containing Heat-Generating Waste
Mohamed Alsharif, Iqbal Ahmed, and Paul Dickman ................................ 899
E16—CRITICALITY AND SHIELDING
Session Organizer: C. V. Parks;
Session Chairs: Daniel Thomas and Mark H. Watmough

Sand Filter Backwash Pit Criticality Analysis
Hans Toffer and David G. Erickson .......................................................... 907

High-Burnup/Low-Cooling-Time Fuel Carrying Capacity of the GA-4 and GA-9 Spent Fuel Shipping Casks
J. K. Boshoven and J. E. Hopf ................................................................. 913

Shielding Analysis for the Conceptual Design of the MPC Transportation Cask
Kelvin J. Montague, James R. Thornton, Jr., and Robert G. Eble, Jr. ............. 918

E17—CASK SYSTEMS DESIGN AND FABRICATION
Session Organizer: Donald Nolan;
Session Chairs: Bill Teer and Donald Nolan

Qualification Leak Testing of the GA-4 and GA-9 Closure Seal Design
Richard H. Boonstra ............................................................................. 923

Fabrication and Testing of High Strength, High Capacity, Weight Optimized Trailers
Chad Taylor .......................................................................................... 931

Dynamic Simulation of Tractor-Trailer-Cask System Used in Nuclear Waste Transportation
Zekai Ceylan and Cahit Evrensel ............................................................ 934

Fabrication Options for Depleted Uranium Components in Shielded Containers
Susan B. Derrington, James E. Thompson, and Cameron W. Coates ............... 942

Dry Storage and Transportation of Failed Fuel
Robert D. Quinn and Brandon D. Thomas .............................................. 949

E18—WASTE PACKAGE DESIGN CONCEPTS
Session Organizer: Thomas W. Doering;
Session Chairs: Hugh A. Benton and Dean Stucker

Multi-Barrier Waste Package Fabrication and Closure Development
Wayne E. Wallin .................................................................................... 955

Corrosion of HLW Carbon Steel Containers in the Vapor Phase of Salt Brines
E. Smailos ............................................................................................. 963

Waste Package Performance Allocation System Study Report
Richard D. Memory .............................................................................. 969

Corrosion Scenario Development for Corrosion Lifetime Prediction of Carbon Steel Used for Geological Disposal Package
Takanori Fukuda, Guen Nakayama, and Masatsune Akashi ......................... 977

Structural Performance of a Multipurpose Canister Shell for HLNW Under Normal Handling Conditions
Samaan G. Ladkany and Rajkumar Rajagopalana ..................................... 984

E19—WASTE PACKAGE MATERIALS
Session Organizer: Thomas W. Doering;
Session Chairs: David Stahl and M. Smith

Waste Package Materials Selection Process
Ajit K. Roy, Robert L. Fish, and R. D. McCright ...................................... 993
Concept for Hazardous Material Management and Container Closure Using Copper Based Alloys
Holt Murray, Jr. ................................................................. 1000

A Probabilistic Approach to Assessing Radioactive Waste Container Lifetimes
Fiona M. Porter, Chris C. Naish, and Susan M. Sharland .............................. 1008

Coupled Mass-Transport and Chemical-Equilibrium Modelling of Bronze Disease
M. B. McNeil and J. C. Walton .................................................. 1014

Performance Assessment of the Copper/Steel Canister
Patrik Sellin, Torsten Eng, and Lars Werme ........................................ 1020

E20—HIGH-LEVEL WASTE TOPICS
Session Organizer: John Richardson; Session Chair: Walter J. Mings

Alternative Approaches to Reliability Modeling of a Multiple Engineered Barrier System
Malwane M. A. Ananda and Ashok K. Singh ........................................ 1030

Plans for Managing High Level Waste at the Savannah River Site
N. A. Sheikh and S. R. Salaymeh .................................................... 1037

Developing Standardized Connection Analysis Techniques for Slim Hole Core Rod Designs
Gregory Fehr and Edmond J. Bailey ................................................ 1048

Integrated Geology and Preliminary Cross Section Along the North Ramp of the Exploratory Studies Facility, Yucca Mountain

Long Term Stability of Natural Glasses,
Vladimir Knobloch and Lumir Nachmilner ........................................... 1066

E21—WASTE PACKAGE SYSTEMS AND PERFORMANCE
Session Organizer: Meraj Rahimi; Session Chairs: Ed Johnson and Meraj Rahimi

A Systems Approach to the Management of a Contaminated Metal Recycle Project
Layne Pincock and Steven Wahnachaffe .............................................. 1069

Rationale for Determining Spent Fuel Acquisitions for Repository Testing
Steven C. Marschman, Robert E. Einziger, and Ray B. Stout ....................... 1074

The Effect of Fuel Type in Unsaturated Spent Fuel Tests
P. A. Finn, M. Gong, J. K. Bates, J. W. Emery, and J. C. Hoh ..................... 1080

Results of Drip Tests on Sludge-Based and Actinide-Doped Glasses
J. K. Bates and E. C. Buck .................................................................... 1088

E22—INTERIM HIGH LEVEL WASTE MANAGEMENT ISSUES
Session Organizer: Kevin D. Seager; Session Chairs: Walter J. Mings and John Richardson

A Tank Moisture Model (TAMMO) for Describing Neutron Scan Data
Edward R. Siciliano, Hans Toffer, and W. Todd Watson ............................ 1102

Remote Infrared System for Scanning Hazardous Waste Tanks
Kim L. H. Morris .............................................................................. 1104

Radiological Characterization of Hanford HLW Tank Farm Core Samples
Vojislav Banjac and A. Sharif Heger ................................................... 1110
Material Condition of Underwater Fuel and Storage Equipment
A. P. Hoskins, J. G. Scott, C. V. Shelton-Davis, and G. E. McDannel ............... 1117

Immobilizing the Calcined High Level Waste in Glass and Crystalline Phases
S. V. Raman .................................................. 1124

Dry Storage of Highly Enriched Uranium Fuel
D. L. Lord, J. A. Carter, and L. F. Ermold ........................................... 1131

INTEGRATED SYSTEMS
T1—MULTIPURPOSE CANISTER—SYSTEM APPROACH
   Session Organizer: William Bailey;
   Session Chairs: Jeffrey Williams and William Bailey

System Implementation of the Multipurpose Canister
William R. Hollaway and Robert Rozier .............................................. 1137

Multi-Purpose Canister Conceptual Design Approach
Nick L. Seagle, Giles G. Childress III, James R. Thornton, David N. Summers,
and Alan H. Wells ............................................................... 1143

At-Reactor Dry Storage Issues
Flora Emami, William Hollaway, and Mark Fleming .............................. 1152

Regulatory Issues Associated with the Multi-Purpose Canister (MPC) System
John P. Roberts, Robert G. Morgan, Mary L. Birch, and Linda J. Desell .......... 1161

Certification of a Spent Fuel Cask for Storage and Transportation
Meg Lusardi, Robert M. Bernero, and Charles J. Haughtney ............... 1168

Role of the Dual Purpose (Storage and Transport) Metal Cask in the Spanish Strategy
for Temporary Storage of Spent Fuel
José A. Gago and José M. Grávalos .............................................. 1174

T2—NEAR FIELD PERFORMANCE ASSESSMENT
   Session Organizer: R. W. Barnard;
   Session Chairs: Patrik Sellin and Roger Eaton

Engineered Barrier Environment, Yucca Mountain
Dale G. Wilder ........................................................................ 1179

Performance Assessment Model of a Single Waste Package
William J. O'Connell, Tzou-Shin Ueng, and Lynn C. Lewis ............... 1188

Integrated Modelling of Near Field and Engineered Barrier System Processes
Alan Lamont and James Gansemer .................................................. 1195

Subrepository Scale Hydrothermal Analysis in Support of Total System Performance
Assessment at Yucca Mountain
Srikanta Mishra ........................................................................ 1202

Development and Feasibility of a Waste Package Coupled Reactive Transport Model
(AREST-CT)
David W. Engel, B. Pete McGrail, James A. Fort, and Janet S. Roberts .... 1214

Sensitivity of Radiological Impacts of a Waste Disposal System to Radionuclide
Sorption in the Geosphere
T. W. Melnyk, J. McMurry, and F. P. Sargent ...................................... 1222
