General Editor, SPIE Milestone Series
Selected Papers on
Temperature Sensing:
Optical Methods

Contents

xi Preface
Ronald D. Lucier

Section One
Historical Perspective

3 Introduction to infrared system engineering [excerpt]
Richard D. Hudson, Jr. (in Infrared System Engineering 1969)

8 The physical basis of current infrared remote-sensing techniques and the interpretation of data from aerial surveys

23 Science behind thermography
Robert P. Madding (in Thermosense V 1982)

31 Practical thermal measurement techniques
Gary L. Orlove (in Thermosense V 1982)

39 Optical analogues in a dispersive medium. Part I: The physical model and geometrical optics
F.E. Alzofon (Journal of Wave-Material Interaction 1993)

47 Optical analogues in a dispersive medium. Part II: Physical optics and anisotropic mediums
F.E. Alzofon (Journal of Wave-Material Interaction 1993)

56 Industrial and research applications of a new, low-cost absolute infrared radiometer
Nelson Engborg, Herbert Kaplan (in Practical Infrared Optics 1978)

Section Two
Theoretical Background

67 The optimum efficiency of production of radiation—a new relation for black body radiation
Shichun Li, Fei Lu, Xiu’e Shao (Infrared Physics 1989)

70 Some calculational results using multi-color radiation inversion

74 A thermal imaging facility for measuring the spatial distribution of the emissivity of materials
F.J.J. Clarke, J.A. Larkin (in Advanced Infrared Detectors and Systems 1986)
79 Infrared temperature measurement with automatic correction of the influence of emissivity
V. Tank (Infrared Physics 1989)

81 Spectral remote sensing of temperature distribution in semitransparent solids heated by an external radiation source
R. Viskanta, P.J. Hommert, G.L. Groninger (Applied Optics 1975)

91 Atmospheric corrections for airborne measurements of water surface temperature
C.L. Tien (Applied Optics 1974)

92 Measurement versus imaging in thermography, or What is resolution?
Claes Ohman (in Fifth Infrared Information Exchange 1985)

98 Simple minimum resolvable temperature difference model for thermal imaging systems
K. Chrzanowski (Optica Applicata 1990)

105 Derivation of various temperature detection limits for thermal imagers under field conditions
M. Menat (Infrared Physics 1982)

110 Infrared transmitting glasses as optical materials in passive systems
A. Ray Hilton (in Practical Infrared Optics 1978)

114 A laboratory calibration of infrared thermometers

Section Three
Detectors and Sensors

123 Sensitive detection of infrared radiation, the optothermal detector and its application
C. Hartung, J. Müller (Infrared Physics 1989)

129 Dynamics of thin-film thermal detectors in infrared imaging systems. 1: Basic equations and Fourier analysis

134 Visualization of thermal fields in saturated porous media by the Christiansen effect
M. Cloupeau, S. Klarsfeld (Applied Optics 1973)

141 Liquid crystal improved technique for thermal field measurements
Franco Giannini, Paolo Maltese, Roberto Sorrentino (Applied Optics 1979)

146 Analytical description of a Fabry-Perot spectrometer. 4: Signal noise limitations in data retrieval; winds, temperature, and emission rate
G. Hernandez (Applied Optics 1978)

152 An optically coupled thermal imager
R.G. Humphreys, H.A. Tarry (Infrared Physics 1988)

167 Optical temperature sensor using Eu³⁺-doped fluoride glass
Y. Ohishi, S. Takahashi (Applied Optics 1986)

171 Fundamental noise limits of thermal detectors
Lynn E. Garn (Journal of Applied Physics 1984)

182 A Stirling Cycle Cryogenic Cooler for infra-red detectors and systems
D. Marsden (in Advanced Infrared Detectors and Systems 1986)

187 Fast cool down I.R. detectors
Section Four
Selected Analytical Methods

195 Ellipsometric method for the measurement of temperature and optical constants of incandescent transition metals
   George P. Hansen, Shankar Krishnan, Robert H. Hauge, John L. Margrave
   (Applied Optics 1989)

207 Method for spectroradiometric temperature measurements in two phase
   flows. 1: Theory

214 Method for spectroradiometric temperature measurements in two phase
   flows. 2: Experimental verification

220 Temperature analysis from multispectral infrared data
   Melvin H. Horman (Applied Optics 1976)

226 Infrared band model technique for combustion diagnostics
   L.E. Brewer, C.C. Limbaugh (Applied Optics 1972)

231 On measurement of neutral gas temperature in the plasma of a spark plug
   Zuzana Chorvatová, Rudolf Hajossy (Optica Applicata 1978)

236 Inversion of optical data to obtain a micrometeorological temperature profile
   William H. Mach, Alistair B. Fraser (Applied Optics 1979)

245 Simple solution for obtaining a temperature profile from the inferior mirage
   Alistair B. Fraser (Applied Optics 1979)

253 Passive optical diagnostics of combustion flows
   J.Y. Wang (Applied Optics 1977)

261 Infrared thermographic temperature measurement during laser heat
   treatment
   T.J. Rockstroh, J. Mazumder (Applied Optics 1985)

264 Multispectral infrared pyrometer for temperature measurement with
   automatic correction of the influence of emissivity
   V. Tank, H. Dietl (Infrared Physics 1990)

276 Remote sensing of surface and near surface temperature from remotely
   piloted aircraft
   James L. Cogan (Applied Optics 1985)

283 Numerical evaluation of the multiple-pair method of calculating temperature
   from a measured continuous spectrum
   Zeljko Andreic (Applied Optics 1988)

286 Analytical interpretation of thermograms including digital processing
   techniques

298 Technique for the analysis of data from an imaging infrared radiometer
   S.P. Braim (Infrared Physics 1988)

303 Image processing software for real time quantitative infrared thermography
   Paul Hughett, Elizabeth A. Fuchs (in Thermosense IX 1987)

311 Three-wavelength pyrometer for measuring flame temperatures
   Kenneth L. Cashdollar (Applied Optics 1979)

314 Noncontact surface temperature measurement by means of a modulated
   photothermal effect
   Thierry Loarer, Jean-Jacques Greffet, Magdeleine Huetz-Aubert (Applied
   Optics 1990)

323 Lidar measurement of temperature: a new approach
   James B. Mason (Applied Optics 1975)

326 Lidar temperature profiling: performance simulations of Mason's method
   Geary K. Schwemmer, Thomas D. Wilkerson (Applied Optics 1979)
Section Five
Fiber Optics

331 Industrial applications of fiber optics in infrared thermal monitoring
John Bedrossian, Jr. (in Thermosense IX 1987)

338 Sensitive, high-speed thermometry using optical fibers

340 Temperature sensing by mode-mode interference in birefringent optical fibers
W. Eickhoff (Optics Letters 1981)

343 Fiber-optic sensing of pressure and temperature
G.B. Hocker (Applied Optics 1979)

347 High-temperature optical fiber thermometer

351 Thermometry in geothermal wells: an optical approach

356 An ultrasonic method of gas diagnostics using an optical beam as a probe

Section Six
Holography, Tomography, and Interferometry

367 Rotational Raman interferometric technique to measure gas temperatures
R.L. Armstrong (Applied Optics 1975)

372 Thermometry by CARS in an automobile engine

384 Mobile CARS instrument for combustion and plasma diagnostics

394 Remote sensing of subsurface water temperature by Raman scattering

408 Temperature soundings with partially scanned interferograms
T.G. Kyle (Applied Optics 1977)

416 Experimental investigation of heat and mass exchange in the chamber of a model greenhouse by the method of holographic interferometry

420 Atmospheric temperature sensing with a multiorder Fabry-Perot interferometer

429 Dual wavelength interferometric technique for simultaneous temperature and concentration measurements in liquids
Jayesh M. Mehta (Applied Optics 1990)

438 Sooting flame thermometry using emission/absorption tomography
Robert J. Hall, Paul A. Bonczyk (Applied Optics 1990)

447 Measurement of flame temperature distribution by IR emission computed tomography
Hiroki Uchiyama, Masato Nakajima, Shinichi Yuta (Applied Optics 1985)

453 Temperature mapping in flames by moiré deflectometry
IR in building physics
Ch. Zürcher (Infrared Physics 1985)

An investigation into the factors affecting infrared temperature measurements for building applications
Y. May Chang (in Thermosense IX 1987)

Quantitative aerial survey of building heat loss

Nondestructive methods for inspection of seams of single-ply roofing membranes
Walter J. Rossiter, Jr. (in Thermosense IX 1987)

Microwave fields determined from thermal patterns
John D. Norgard, Ronald M. Sega (in Thermosense IX 1987)

Noncontact fluorescence thermometry of acoustically levitated waterdrops
Mark Seaver, J.R. Peele (Applied Optics 1990)

Method for measuring temperatures and densities in hypersonic wind tunnel air flows using laser-induced O₂ fluorescence
Gabriel Laufer, Robert L. McKenzie, Douglas G. Fletcher (Applied Optics 1990)

Furnace temperature profiles: measurements by spectroscopic methods
R.D. Cutting, I.McC. Stewart (Applied Optics 1975)

Two-color imaging radiometry for pyrotechnic diagnostics
John Brownson, Kathleen Gronokowski, Edward Meade (in Thermosense IX 1987)

Calibration of infrared instruments for the remote sounding of atmospheric temperature
J.T. Houghton (Applied Optics 1977)

An automatic gasdynamic pyrometer for measuring the temperature of gases in furnaces
V.D. Mironov, M.G. Kharchenko (Thermal Engineering 1973)

A review of infrared and submillimeter astronomy with balloon-borne telescopes
G.G. Fazio (Infrared Physics 1979)

A discussion of emissivity correction and its application in infrared microimaging
Jay W. Shepherd (in Thermosense IX 1987)

An optical method for measuring temperature and electric field in semiconductors
