CONTENTS

Summary report ........................................................................................................ 9

THERMODYNAMICS OF FISSION PRODUCTS (Session I)

Chemical state of the fission products in oxide fuels (Abstract only) ...................... 16
   H. Kleykamp
High temperature thermodynamic properties of the fission product compounds of cesium and rubidium ................................................................. 17
   R. Kohli, W. Lacom
Caesium as an internal chemistry monitor of fast neutron reactor fuel pins irradiated at high burn-up ................................................................. 23
   A. Delbrassine
Chemistry of the fuel-clad gap of a PWR rod ............................................................. 35
   W.G. Burns, E.H.P. Cordfunke, P.A.V. Johnson, P.E. Potter, G. Prius, M.H. Rand
Basic thermodynamic and transport properties of some fission products in oxides and intermetallic systems relevant to the behaviour of nuclear fuel 43
Characterization of fission product deposits on inside surfaces of BWR cladding 55
   A. Ohuchi

FISSION PRODUCTS MIGRATION AND RELEASE (Session II)

OECD/NEA review on fission gas release studies in the Halden project (Abstract only) ... 63
   E. Kolstad
How local measurements increase our understanding of fission product release ............ 64
   M. Mogensen, C.T. Walker
Experimental investigation of the distribution of the gaseous fission products in fuel rods ........................................................................................................ 73
   A.C. Demildt, J. Ketels, L. Sannen, J. van de Velde
Experience on fission gas release in high burnup fuel rods operating in power plant .......... 82
   D. Baron, B. Houdaille, M. Trotabas, A. Raybaud
French experiments on fission product release under normal and off-normal PWR conditions. A review ................................................................. 89
   M. Charles, C. Lemaignan
Modelling of the fission product release from irradiated overheated LWR fuel .......... 96
   J. van Vliet
The study of fission products release from failed fuel elements of light water reactors ...... 103
   L.M. Lusanova, P.D. Slavyagin
FISSION PRODUCTS RELEASE IN TRANSIENTS OR ACCIDENT CONDITIONS
(Session III)

Release of the volatile fission products Xe, Kr and Cs from PWR fuel under steady and transient conditions up to high burnup .................................................. 108
F. Sontheimer, P. Dewes, R. Manzel, H. Stehle

Cs and I source terms of irradiated UO$_2$ .................................................. 121
M. Peehs, G. Kaspar, F. Sontheimer

Grain boundary sweeping and dissolution effects on fission product behavior under severe fuel damage accident conditions .................................................. 131
J. Rest

Fission product release measured during fuel damage tests at the power burst facility .... 147
D.J. Osetek, J.K. Hartwell, K. Vinjamuri, A.W. Cronenberg

FISSION PRODUCTS TO CLADDING INTERACTION – STRESS CORROSION CRACKING (SCC) (Session IV)

Determination of chemical conditions under which CsI can cause SCC failure of Zircaloy tubing (Abstract only) .................................................. 153
P. Hofmann, J. Spino

Chemical thermodynamic analysis of halogen stress corrosion cracking of Zircaloy cladding .................................................. 154
R. Kohli

International TRANS-RAMP I fuel project .................................................. 157

Studies of radiation-thermal decomposition of caesium iodide and stress corrosion cracking of VVER fuel clads on gamma-irradiation .................................................. 167
Yu.K. Bibilashvili, M.V. Vladimirova, I.S. Golovnin, I.A. Kulikov, V.V. Novikov, A.S. Sotnikov

Methods and results of out-of-pile studies of high temperature interaction between uranium dioxide fuel and zirconium alloy clads .................................................. 173

List of participants .................................................. 178
