CONTENTS

Keynote Speaker
Influence of Boston's John Hancock Building on Wind Engineering and Tall Building Design
William J. LeMessurier .................................................. *

Session 1M01-70: Emerging Technology for Timber Bridges
Dynamic Evaluation of Wood Bridges
Terry J. Wipf, Michael A. Ritter, and Sheila R. Duwadi ........................................ 1
New Applications of Structural Composite Lumber in Timber Bridges
Christopher B. Meyer .................................................. 5
Using Lightweight MPC Wood Trusses in Bridges
Habib Dagher, Vince Caccese, F. Altimore, Y. Hsu, Ron Wolfe, and
Michael A. Ritter ....................................................... 9
Design of Timber Bridge Stringers with High Strength Fiber Reinforcing
Paul C. Gilham ........................................................... 13

Session 1M02-23: Intelligent Damage Monitoring of Civil Engineering Structures
Evaluation of Permanent Monitoring Sensors on Navy Piers
George E. Warren, and Javier Malvar .................................... 28
Nondestructive Evaluation of Distress in Concrete Bridge Decks
Eric N. Landis, and Surendra P. Shah .................................. 44
A Knowledge-base for Predicting Damage to Nonstructural Partition Walls Due to Seismic Loading
H. Allison Smith, and Vicki Vance ..................................... 48
Neural Network Based Sensor Signal Monitoring of Instrumented Structures
Stuart S. Chen, and Sungkon Kim ....................................... 52

Session 1M03-21: New Developments on the Dynamic Response of Lattice Structures
Stability of a Geodesic Dome Under Symmetric Dynamic Loads
Aslam Kassimali, and Khalil Rabiei ..................................... 56
Dynamic Behavior of Cylindrical Water Tanks Superimposed with a Three-Way Lattice Skeleton
Theodore E. Anvick, Janet L. Ware, and Daniel C. Frederickson ................. 60
Supplemental Damping to Control Vibration of Lattice Domes
Celina U. Penalba ....................................................... 64
Stability of Double-Layer Grid Structures Subjected to Dynamic Loads
Ramesh B. Malla, and Butchi B. Nalluri ............................... 68

Session 1M04-36: Bracing of Compression and Flexural Members
Bracing in Cantilever-Suspended Span Construction
D.J. Laurie Kennedy ..................................................... 72

*Manuscript not available at time of printing
Application of Partial Bracing Procedure
Leroy A. Lutz .......................... 76

Bracing of Steel Bridge Girders Braced by Metal Deck Forms
Todd A. Helwig, and Karl H. Frank ........ 80

Stiffness and Strength of Bracing for Compression Members
Murray J. Clarke, and Russell Q. Bridge ..... 84

Bracing for Stability—State-Of-The-Art
Joseph A. Yura ......................... 88

Session 1M05-88: Pedestrian Wind Levels—Methods and Criteria
Full-Scale Studies of Pedestrian Winds: Comparisons with Wind Tunnel and Evaluation of Human Comfort
Nicholas Isyumov ........................... 104

Pedestrian Comfort: A Discussion of the Components to Conduct a Comprehensive Assessment
Michael Soligo, Colin J. Williams, Peter A. Irwin, and Glenn D. Schuyler .......... 108

Pedestrian Wind Climate and Water Transport
Timothy A. Reinhold, and Peter J. Vickery ...................................................... 1867

Equivalent Average Pedestrian Wind Comfort Criteria
Frank H. Durgin .......................... 112

Session 1M06-59: New Advances in Structural Optimization
Design Optimization of 3D Reinforced Concrete Skeletal Frameworks
Donald E. Grierson, and M.J. Fadaee ......................................................... 116

Optimization of Large Scientific Structures
M.S. Zarghamee, J. Antebi, and R. Ojdrovic ................................................. 130

Optimizing Structural Systems
M.Z. Cohn .................................. 141

An Alternative Linearization Method
Scott A. Burns .............................. 153

Session 1M07-19: High Performance Steels—The New Frontier
Implementation of HPS in Bridge Design
John Kulicki, and Wagdy G. Wassef ................................................................. 157

High Performance Steel—The Material of the Future
Robert L. Nickerson ......................................................... 173

Potential for High Performance Steel in Plate-Girder Bridges
Koji Homma, and Richard Sause ............................................................ 177

Fracture Toughness and Ductility of High Performance Steel
William J. Wright, Hernando Tjiang, and Pedro Albrecht ................................ 193

Session 1M08-61: Recent Seismic Code Developments
Development of 1994 NEHRP Site Coefficients
Edward R. Rinne ............................... 197

Performance Based Seismic Design
L.D. Reaveley, and Christopher Rojahn .......................... 206

Seismic Design Value Mapping—A Status Report
Roland L. Sharpe, and James E. Beavers ................................................. 220

Steel Plate Energy Dissipators for a 3-Story Frame
Keh-Chyuan Tsai, R.T. Yu, I.C. Tsai, and W.B. Hsiang .................................. 233

Session 2M01-30: Suspension Bridges
Technological Aspects of the Akashi Kaikyo Bridge
Shoichi Saki, Kazuo Tada, Makoto Kitagawa, Tomoki Kanaoka, and Yozo Fujino .......... 237

The Storebelt East Bridge
Neil Gimsing ................................ 253

Monitoring System for Tsing Ma Bridge
Han-Sang Kwong, C.K. Lau, and K.Y. Wong ............................................ 264

Modern Suspension Bridges in China
Mao Run Feng ................................ 268

Session 2M02-73: Timber Bridge Inspection, Maintenance and Rehabilitation
Evaluation of Timber Bridges Using Stress Wave Technology
Roy F. Pellerin, Robert J. Ross, Robert H. Falk, and Norbert J. Volny .......... 277

Rehabilitation of Slab Span Timber Bridges
Kenneth A. Johnson, and Eugene Isakson ............................................. 281

Maintenance Practices for Wood Bridges
Michael A. Ritter, and Thomas G. Williamson ........................................ 290

Factors Influencing Timber Bridge Performance
Kim Stanfill-McMillan, and James A. Kainz ........................................... 294

Session 2M03-24: Recent Developments in Tensioned Fabric Structures
Long Span Systems for Tensioned Fabric Roofs
Craig Huntington ............................................ 298

Tensioned Fabric Membrane Roofs for Tensegrity Domes
David Campbell, David Chen, Paul Gossen, and Kris Hamilton .......... 302

Forms of Fabric Structures for Permanent Buildings
Horst Berger .................................. 306

Session 2M04-03: Design Office Problems 1—Questions and Answers
Performance of Steel Framed Buildings in the January 17, 1994 Northridge Earthquake
James O. Malley ........................................ 320

Use of Slip-Critical Connections in the Design of Lateral Force-Resisting Frames
Robert O. Disque ................................................. 333

Using Tuned Mass Dampers to Eliminate Annoying Floor Vibrations
Ronald L. Shope, and Thomas M. Murray ............................................. 339

Minimum Eccentricity for Simple Columns?
Socrates A. Ioannides ............................................. 349

Session 2M05-89: Wind Load Attributes of Architectural Features
Influence of Architectural Features on Wind Loads
Richard M. Ainsley, and Paul Carpenter ................................................. 353

Wind Loads on Tall Buildings in the Presence of Through Openings
Nicholas Isyumov, and Ronald James Dutton ........................................ 357

The Aerodynamic Properties of a Roughened Cone
Richard G.J. Flay, and Barry J. Vickery .................................................. 361

Wind Load Reduction by Porous Fences on Low-Rise Buildings
Leighton S. Cochran, Jack E. Cermak, and Elizabeth C. English .......... 365

Session 2M06-91: Analysis of Creep in Structural Masonry
Prestress Loss in Post-tensioned Masonry: Influence of Unit Type
J.J. Brooks, M.D. Parker, and S.H. Tapsir .................................... 369
Creep Data for Design of Masonry
N.G. Shrive ..................................................... 381
On the Representation of Masonry Creep by Rheological Analogy
R.J. Harvey, and T.G. Hughes ................................. 385
Modelling Creep in Masonry Based on Creep of Units and Mortar
Subhash C. Anand, and Naresh Bhatia .......................... 397

Session 2M07-82: Innovative Structural Systems Using Enhanced Performance Steels

Worldwide Applications of High Performance Steels
Roger Wildt ..................................................... *
Strength and Fracture of Welded HSLA Steel Structures
Robert J. Dexter ................................................. 401
Beam-to-Column Connections Using High Strength Steel Castings with Improved Weldability
Eric J. Kaufmann, B. Vincent Viscomi, and Le-Wu Lu ............ 405
Modern Steel Making Innovations in Light Shapes
J.H. Temple ..................................................... 419

Session 2M08-61A: Examination of Code Issues For Seismic Design

A Balanced Seismic Steel Design Procedure for Strength and Ductility Requirements
Chia-Ming Uang ................................................ 423
A New Analysis Procedure for Accidental Torsion
J.C. De la Llera, and Anil K. Chopra .............................. 427
A Critical Review of Current Approaches to Earthquake-Resistant Design
Christopher Rojahn, and Andrew Whittaker ......................... 431
A Comprehensive Approach Towards the Development of a Performance-Based Seismic Source Document
Chris D. Poland ................................................ 443

Session 3M01-29: Cable-Stayed Bridges

The Yangpu Bridge—A World Record Cable-Stayed Bridge
Lin Yuanpei, Zhu Zhihao, and Shen Gong .......................... 447
Design of a Double Deck Cable Stayed Bridge for Combined Highway and Railway Traffic
Thomas G. Lovett ................................................. 451
Multispan Cable-Stayed Bridges
Man-Chung Tang ................................................ 455
Aeroelastic Investigations of Cable-Stayed Bridges by Time History Analysis
Frieder Thiele .................................................. 459
Solutions for the Seismic Problems of Superlong Cable-Stayed Bridges
Aly S. Nazmy .................................................. 465

Session 3M02-72: Nondestructive Evaluation of Wood Structures

NDE Techniques for Wood Structures
Robert J. Ross .................................................. 469
Non—Destructive Evaluation of Heavy Timber Structures
Donald W. Neal .................................................. 473
Inspection and Evaluation for Structural Members and Connections in the USS Constitution
Lawrence A. Soltis ............................................... 489

*Manuscript not available at time of printing.
Finite Element Analysis of FRP Underground Storage Tanks
Phillip A. Sharff 623

Design Challenges of a Fully Composite Long-Span Bridge
Magdi A. Khalifa, and Maher K. Tadros 634

Session 3M08-79: Structural Condition Assessment of Buildings: Standards and Case Studies

Structural Condition Assessment of Existing Buildings
Carl A. Baumert, Jr. 638

How Long Will It Last? Condition Assessment of the Building Envelope
G. Gabriel Cole, and Miles E. Waltz, Jr. 642

Seismic Evaluation Using ASCE 11-90
Melvyn Green 658

Systematic Approach to Structural Condition Assessment
Jerome S.B. Iffland 662

Keynote Speaker
A Vision of Leadership—The Role of the Engineer in Rebuilding Our Country
Eugene J. Fasullo

Session 1T01-10: Bridge Management

Bridge Management: A Panel Discussion
Bojidar S. Yanev 666

Bridge Management and Life Cycle Cost
Neal H. Bettigole 668

Research Needs for Bridge Management
Steven B. Chase 670

Structural Engineering Applications in Bridge Management Systems
George Hearn 672

Bridge Management: Lessons from the American Crisis
Jacqueline Llanos 674

Life-Cycle Cost Analysis for Highway Bridges
Robert L. Nickerson 676

Development and Implementation of the Indiana Bridge Management System
Kumares C. Sinha, and Jeffrey D. Vitale 678

Bridge Management Systems
George P. Romack 680

Importance of Global Co—operation for More Effective Bridge Management
Burkhardt Horn 682

Session 1T02-32: Experiment Design for Health Monitoring of Structures Using Nondestructive Testing

Design of Nondestructive Tests for Health Monitoring of Structures
Masoud Sanayei, and Michael J. Saletnik 684

Experimental Design Using Long Gage Length Sensors
William B. Spillman, and Dryver R. Huston 688

Characterization of Structural Response for Systems with Loose Joints
Robin J. Bruno 692

Development of Nondestructive Evaluation Techniques for the Characterization of FRP Components
Jerrol W. Littles, Jr., Laurence J. Jacobs, and Abdul-Hamid Zureick 696

Session 1T03-01: Assessment and Upgrade of Existing Power Lines

Life Extension of Transmission Lines at Ontario Hydro
Magdi Ishac, and Anand Goel 700

Practical Reliability Evaluation of Transmission Lines
Habib Dagher, Q. Lu, and Alain H. Peyrot 704

Expert Guide for Overhead Power Lines at EDF
B. Dalle, J.L. Garde, M. Roux, and O. Van-Ackere 708

Computer Tools to Assess Transmission Lines
Alain H. Peyrot, and Naiyi Jiang 718

Session 1T04-41: Developments in Load and Resistance Factor Design

The 1993 LRFD Specification
Charles J. Carter 722

Jerome F. Hajjar, and Donald W. White 726

The Application of Partial Restraint Frame Connections in LRFD
Kurt D. Swensson, and Arvind Goverdhan 730

The Future of LRFD
Theodore V. Galambos 734

Session 1T05-22: Seismic Retrofit of Nonductile Buildings

Applications of Current Research to Seismic Evaluation of Reinforced Concrete Buildings
Thomas A. Sabol, and M. Saiful Islam 738

Retrofit of R/C Building Frames Using Friction Dampers
Rajesh Rao, Richard N. White, and Peter Gergely 742

Seismic Retrofit of Non—ductile R/C Frame Structures
Joseph M. Bracci, and Sashi K. Kunath 746

Retrofit of Concrete Structures Using Damping Devices
Andrei M. Reinhorn, and Chen Li 760

Session 1T06-86: Logic Programming for Structural Engineering

Logic Programming for Structural Engineering: An Introduction and Overview
Sivand Lakmazaheri 764

Integrating Logic Programming and CAD Systems for Modeling Structural Systems
Sivand Lakmazaheri 779

Logic-Based Object-Oriented Modeling for Health Monitoring of Instrumented Structures
Stuart S. Chen, and Sungkon Kim 783

Logic-Based Programming of Standards Processing with Computer Graphics Interface
Sungkon Kim, and Stuart S. Chen 787

Session 1T07-15: Rehabilitation of Steel Connections

Seismic Retrofit of Riveted Stiffened Seat Angle Connections
Michel Bruneau, and Majid H.K.M. Sarraf 791

Easy, Concise Calculations for Eccentrically Loaded Connections
Thomas W. Hartmann 807

Economical Flange Replacements for Built-up Steel Sections
Benjamin J. Biller 811
