CALORSTOCK '94

THERMAL ENERGY STORAGE
Better Economy, Environment, Technology

6TH INTERNATIONAL CONFERENCE
ON THERMAL ENERGY STORAGE

August 22-25, 1994
Espoo, Finland

Organized by
HELSDINKI UNIVERSITY OF TECHNOLOGY
Department of Technical Physics

Proceedings
(in two volumes)

Editors
M.T.Kangas and P. D.Lund
TABLE OF CONTENTS

Volume 1

Aquifer Storage

Underground containment barriers for thermal storage in aquifers using gravel washing slimes
Gabriel de los Cobos and Aurèle Parriaux 1

Seasonal heat storages in aquifers
B. Draganov, I. Moiseykina and A. Shyrchkov 9

Criteria for ATES wells
C. Mirza 17

Managing ATES
C. Mirza, F. Cruickshanks and E.L. Morofsky 25

Studies of heat-mass transfer in the system of thermal energy storage in aquifers
I. Moiseykina 33

Predicting the behaviour of thermal energy and temperature-dependent reactive mass transport in shallow aquifers
J.W. Molson, E.O. Frind, D.W. Blowes and C.J. Ptacek 41

New possibilities to increase the temperature difference in aquifer systems
Urban Olsson 49

Thermohydraulic modelling of aquifer storage systems
T. Probert, J. Claesson and G. Hellström 57

Study on the employment of ATES into heat supplying systems
P. Seibt and F. Kabus 65

Mass exchanger for high-rise buildings with aquifer storage
H.W.A. Tolido, W.B. Veltkamp and A.B. Schaap 73

Aquifer thermal energy storage in a fractured siltstone aquifer
Howard R. Williams, Frank B. Cruickshanks, David Hansen and Darryl A. Pupek 81
Integration into Energy Systems

Sussex Health Centre aquifer thermal energy storage
Frank Cruickshanks and Ernest Adsett

Building wind design methodology for Italian climatic areas (second report). Advancement
A. Ciolfi

Allocation of resources in an energy network
Azzedine Haftari

The Triangeln-trade center - an ATES-project in Malmö, Sweden
Johan Landberg, Thomas Hallén

Thermal balance of an heliogeothermal heating plant for an administrative building with vertical boreholes and seasonal recharge
Bernard Matthey

Building redesign results: comparing an efficient, conventional mechanical system to aquifer thermal energy storage
Edward Morofsky, Denis A. Morris and James Vaughan

Effective utilization of solar energy with seasonal storage
M. Okumiya and H. Tanaka

Thermal storage for enclosed compartment(s)
A. Rafalovich, W. Longardner, G. Keller and T.C. Schmidt

Integrated energy saving applications of energy storage in buildings in northern climates
Jaakko J. Saastamoinen

The consequences of store characteristics for heat recovery in process networks
S. Stoltze, J. Mikkelsen, B. Lorentzen, P.M. Petersen and B. Qvale

Incorporation of heat storage into non-steady industrial (batch) processes
S. Stoltze, J. Mikkelsen, B. Lorentzen, P.M. Petersen and B. Qvale

Simulation Models and Design Tools

Numerical simulation of short term thermally stratified energy storage
J. van Berkel, R. de Lange, B. Beljaars and C. Rindi
A simple design method to predict the efficiency of an underground heat storage with or without natural groundwater flow
   Jean-Christophe Hadorn

Software for dimensioning of deep boreholes for heat extraction
   G. Hellström and B. Sanner

Validation of simulation model THETA for thermohydraulic and environmental analysis of aquifers using the Rajamäki long-term experiments
   M.T. Kangas and P.D. Lund

MicroTHETA - a PC-based tool for aquifer thermal energy storage systems including environmental impact analysis
   M.T. Kangas and P.D. Lund

Numerical modelling of thermal behaviour of a building with passive solar system
   H. Koczyk and A. Gorka

Seasonal heat storage in an unsaturated ground: A parametric study
   T.H. Mai, M. Lachi, M. Abgrall and J. Padet

Analytical approximation of a design of a seasonal thermal energy storage in a semi-arid zone
   E. Merzlyakov, C. Doughty and A. Nir

Borehole heat store design optimization - the SmartStore model
   Bo Nordell

Heat loss analysis of bermed thermal storages with spatially varying thermal properties
   M.A. Rosen, G.C. Hanford and L.H. Gunnewiek

Designer oriented temperature-distribution models for vertically stratified thermal energy storages to facilitate energy and exergy evaluation
   M.A. Rose and F.C. Hooper

Single-well aquifer thermal energy storage (ATES). Design and simulation principles.
   Stig Niemi Sørensen and Jan Reffstrup

Comparison of measured and predicted thermal storage performance of a rock bed prototype
   S. Vitale, F. Parrini, M. Alabiso, R. Lo Cicero Vaina and F. Sperduto

Modeling of dynamic ice-storage tanks
   M. Yamaha and N. Nakahara
An analytical-solution-based dynamic model of district heating networks

Hongping Zhao

IEA Energy Conservation through Energy Storage Programme Workshop

Edward Morofsky

Full scale latent heat storage installations

V. Lottner

ATES: Water treatment and environmental impacts

Aart L. Snijders

IEA Energy Conservation Through Energy Storage Annex 7: Seasonal Thermal Storage for Cooling and Heating

Verne G. Chant and Edward Morofsky

Annex 8, Implementing underground thermal energy storage: IEA energy conservation through energy storage (ECES)

Bo Nordell and Björn Sellberg

Earth Coupled Storage

Field experiments with a single duct in water saturated claystone

H. Berberich, N. Fisch and E. Hahne

Thermal behaviour of the ground store during heat extraction by a small house heating system

Dorota Chwieduk

The conductive-radiative boundary effect in beds with stagnant fluid

B. Grochal

Combined heat and cold storage in a gravel/water pit

E. Hahne and M.F. Hornberger

Fluid-to-ground thermal resistance in duct ground heat storage

Göran Hellström
Design and energy performance of a test field for high temperature storage in clay
   Marti Lehtmets and Anna Gabrielsson

The combined rock cavern/borehole heat store
   Bo Nordell, Jouko Ritola, Björn Sellberg and Kari Sipilä

Determining thermal properties of hybrid storage materials
   H. Ö. Paksoy and Y. Demirel

District Heating and Utilities

Feasibility study of a heat storage in a district heating system in northern Sweden
   J.A. Dahl and L.R. Hermansson

Optimal scheduling of heat production with storage and stochastic demands
   Claus Jørgensen and Hans F. Ravn

Large thermal storage systems in district heating and CHP systems
   Matti Nuutila

Electricity storing with compressed air energy storage
   Kari Sipilä, Magnus Wistbacka and Anne Väätäinen

Thermal energy storage in utility-scale applications

Optimization of the operation of a heat storage connected to a heat and power production system
   E. V. Tamminen, V.P.J. Kekkonen and C.M.M. Wistbacka

Application of heated water storage system in local area
   T. Ueda and Y. Inada

Operational optimization of district heating (DH) systems - Using a DH network as a heat storage
   Hongping Zhao, Benny Böhm and Hans F. Ravn
