DENVER GEOTECH '87
COMPUTER-AIDED METHODS
IN GEOLOGY AND ENGINEERING

DOUGLAS C. PETERS
STEPHEN A. KRAJEWSKI
EDITORS
# TABLE OF CONTENTS

**PREFACE** .............................................................................................................................. iii  

**EXTENDED ABSTRACTS:**  

Ema Acheson  
  Public Domain Hydrogeologic Software ............................................................................. 1  

D.V. Arrington and R.C. Lindquist  
  The Well Log Data System - Establishing A Well Log Database For Florida ..................... 6  

D.V. Arrington and R.C. Lindquist  
  Digitizing Florida Karst For A New Perspective .................................................................. 11  

D.W. Bartow  
  QuickEST: A Fast 3-Dimensional Reserve Estimator For The Exploration Phase ............... 16  

*Mohsen Beikae and Ram Swaroop  
  Monte Carlo Simulation In The Selection Of A Dam Modification Alternative ................... 24  

Ronald S. Bell  
  The Interpretation Of EM Conductivity Data Using The Program EMIX34 On An IMB-PC .... 31  

Ronald S. Bell  
  Seismic Refraction Interpretation Using The Generalized Reciprocal Method (GRM) And An IBM-PC .................................................................................................................................. 39  

Ronald S. Bell  
  The Interpretation Of DC Resistivity Data Using The Program RESIX On An IMB-PC .......... 40  

Ronald S. Bell  
  The Real-Time Interpretation Of Magnetic And Gravity Data On A Personal Computer .......... 47  

Phillipe Bernard and S.A. Krajewski  
  Integrating Elevation Data When Modeling Potential Field Data To Overcome A Common Interpretation Pitfall ..................................................................................................................... 48  

Troy C. Bettinger  
  Representing And Analyzing Directional Geologic Data ..................................................... 49  

Antanas Bindokas and F.S. Kendorski  
  Three-Dimensional Characterization Of Rock Mass Fracturing ........................................... 59  

Richard D. Bowdon  
  Moving Data Between Geological Applications .................................................................... 66  

James Bower  
  Computer Management Of Environmental Data ................................................................. 67  

*This paper was given the "GeoTech '87 Best Presentation Award."
Clifford N. Brandon III
Managing Mineral Land Data With Microcomputers ........................................ 68

Rex C. Bryan
VMODEL - An Interactive Program For Fitting Theoretical Spatial Functions From Empirical Variograms ................................................................. 69

Howard N. Cappel
Predicting Overpressured Shale From Seismic Data Using Lotus 1-2-3 .................. 76

W.A. Charlie, D.O. Doehring, and G.E. Veyera
An APL Function For Modeling P-Wave Induced Liquifaction ............................... 83

Bob Counter
Underground Mine Cost Reporting Using Personal Computer ............................. 89

David A. Dansby
"Graphical Well Analysis Package" --A Micro-computer Implementation Of The Standard Graphical Curve Matching Algorithm Used For Well Test Analysis ......................... 96

B.M. Davis and Don Hulse
Assessing Global Reserves Using Polygonally Weighted Indicators ....................... 103

L.G. Eaton and Kenneth Strzepek
Water Well Design Expert System ........................................................................ 107

Patricia T. Eliason

Michael F. Fahy
Directional Sources: Complex Source-Models In Fractured-Reservoir Flow ............. 118

M.F. Fahy and Helen Lewis
Three Dimensional Stress Functions ...................................................................... 119

M.F. Fahy and V.L. Riggert
Subsurface Structural Information Techniques ...................................................... 121

N.B. Ferguson, G.B. Mandryk, and R.J.H. Richardson
Application Of A Geographic Information System (GIS) For Coal Resource Planning .......................... 122

J.V. Gardner and J.M. Monget
Geological Applications Of Polar-Orbiting Satellite Data: Microcomputer-Based Case Histories .................................................................................... 123

Betty L. Gibbs
Mining With Public Domain Software .................................................................... 130
V. Goebel, T. Amrine, and S. Burkholder
PC Based Processing Of Seismic Field Data .................................................. 137

Derek Gresham
Microcomputer Applications For Mineral Exploration ....................................... 145

W.D. Grundy and A.T. Miesch
Statistical Programs For Microcomputers –USGS Open File Report 87-411-A ........ 146

R. Zeke Houk
Public Domain Programs Of The Computer Oriented Geological Society ........... 147

Don E. Hulse
Using Bounding Techniques To Improve The Performance Of Computerized Ultimate Pit Limit Analysis ................................................................. 148

Bryan James
Subsurface Imaging With Transient Electromagnetic Data .................................. 153

J.L. Jehn and P.L. Martin
Further Comparisons Of Differing Modeling Approaches To A Multilayered Aquifer .. 158

L.E. Johnson, D.P. Loucks, and D.C. McKinney
An Interactive Groundwater Modeling System .................................................. 159

Stephen M. Johnson
ListPro – A Natural Language Information Retrieval System ............................ 160

Walter E. Johnson
Amplitude-With-Offset Gradient Modeling Over A Minnelusa Field .................... 167

Louis C. Just
Personal Computers As Platforms For Engineering Workstations ....................... 174

Solomon S. Katz
Using A. Geographic Information System (GIS) As A Mineral Expert System .......... 175

**Solomon Katz
BLM's Geographic Information System On The Personal Computer ..................... 196

Ronald N. Knoshaug
Expert Systems In The Geosciences -- A Historical Review ............................ 200

R.N. Knoshaug, A.K. Turner, Michael Bower, and Khalil Nassar
DOWSER Expert System .................................................................................. 203

John O. Kork
U.S. Geological Survey Graphics Programs For Use On Microcomputers ............... 205

**This paper was given the "GeoTech '87 Best Poster Award."
J.H. Scott and R.G. Burdick  
New Programs For Inversion Of Seismic Refraction Data On A Microcomputer .................. 313

William Sharp, Russ Miller, Levent Ozdemir, and David Taff  
Computer Modeling and Design of Mechanical Boring Machines ................................. 319

V.R. Shea, T.C. Bettinger, and D.C. Peters  
Calculation Of Overburden Stress Using Digital Elevation Model (DEM) Data ................. 326

Michael D. Smith  
Prospect Evaluation With Risk Analysis Considerations ............................................... 327

Neil W. Smith  
Digital Recording Of Well Logs .................................................................................. 328

C.D. Somanas, B.C. Bennett, and Y.J. Chung  
In-Field Seismic Data Processing ........................................................................... 334

John Strobel, C.G.S.C. Kendall, Gautam Biswas, James Bezdek, and Robert Cannon  
Preliminary Description Of The Program SEDFITL With Carbonate Module Added ...... 341

Kenneth M. Strzepek  
General Issues Of AI In Engineering ......................................................................... 350

David Taff  
Laboratory Tunnel Boring Machine Rotating Optical Telemetry System ...................... 354

R.B. Taylor and G.L. Seiner  
USGS Geologic Mapping Software For The IBM-PC And Compatible Microcomputers .. 360

James A. Thomson  
Graphical Display Of Quantitative Groundwater Models ............................................. 364

William A. Turner  
Designing A Microcomputer-Based Coal Exploration Database ................................... 365

J.M. Yarus and Aaron Brown  
Machine Contouring: Reading Between The Lines ....................................................... 371
