Proceedings of

ION GPS-95

The 8th International Technical Meeting of
The Satellite Division of The Institute of Navigation

Part 1 of 2

September 12-15, 1995
Palm Springs Convention Center
Palm Springs, California
ION GPS-95 PROCEEDINGS TABLE OF CONTENTS

Plenary Session

GPS – The Ultima Thule of Navigation
James Schlesinger, Keynote Speaker ION GPS-95 .................................................. 3-6

Panel Discussion: GPS Critical Technology, Policy, and Institutional Issues
Moderator: Keith McDonald, Sat Tech Systems; Panel Members: Dr. James Schlesinger, Joseph Canny,
Gil Klinger, Larry Adams, Charles Trimble, Dr. Scott Pace, and Col. John Caldwell, USAF .................................................. 7-14

Session A1: Surveying and Geodesy

A Comparison of GPS and Satellite Altimetry for Height Monitoring on an Offshore Production Platform
Moira Tighe and John Macgregor, Shell U.K. Exploration and Production ........................................... 17-23

A GPS Positioning Results Using Precise Satellite Ephemerides, Clock Corrections and Ionospheric Grid Model with Jupiter
Yang Gao, James McLellan, and Mohamed Abousalem, Pulsearch Navigation Systems, Inc. ............. 25-34

A Compact Earth Tides Algorithm for WADGPS
James Sinko, SRI International .................................................. 35-44

Evaluation of DoD GPS Satellite Orbits Using NASA Laser Ranging Data
James O'Toole and Michael Merrigan, Naval Surface Warfare Center ........................................... 45-54

Improved Ambiguity Resolution by Regional Differential Modelling of the Ionosphere
Lambert Wanninger, TU Dresden, Germany .................................................. 55-62

An Efficient Algorithm for Batch Estimation of Non-Dynamic Parameters of Double-Differenced GPS Phase Measurement
H. Rim, B. Schutz, and B. Tapley, University of Texas at Austin .................................................. 63-71

Determining Earth Orientation by Global Positioning System at the US Naval Observatory
Peter Kammeyer and James Rhode, US Naval Observatory .................................................. 73-81

Programme of Research of CEI (Central European Initiative) Countries in Geodesy and Geodynamics
Janusz Sledzinski, Warsaw University of Technology .................................................. 83-91

Sakhalin Island GPS Survey: A Case History
Paul Godwin, Mobile Oil Corporation; Sergey Duginov, Romona Ltd.; John Brown, Geodetic Technology Company .................................................. 93-104

Economics of GPS and CORS
William Young, Riverside; Yehuda Bock and Shelley Marquez, Scripps Institute of Oceanography ............. 105-113

Session B1: Product Announcements

Open Architecture Design for GPS Applications
Yves Theroux, Canadian Marconi Company .................................................. 117-121

Two Piece Chipset for GPS Makes a Four Chip GPS Receiver
Philip Mattos, SGS-Thomson Microelectronics .................................................. 123-132

What's New From NovAtel
Simon Newby and Wendy Corcoran, NovAtel Communications Ltd. .................................................. 133-140

GPS Tensor™ GPS Receiver for Attitude and Orbit Determination
J. Kurt Brock, Space Systems/LORAL .................................................. 141-142

Hitachi HGA-D Fiber Optic Gyroscope for Vehicular Applications
Bob Yoshida, Hitachi Cable America; Vincent Martinelli, Corning Incorporated .................................................. 143-146

Honeywell's DGPS Local Area Augmentation System Ground Station
Steve Serfling, Honeywell .................................................. 147-156

Starwatch™: An Off-the-Shelf GPS Asset Location System
John Lavrakas, Advanced Research Corporation .................................................. 157-160

The XR5-PC12 – Position and Time/Frequency From a Single Plug-in Module
Tony Haddrell, Navstar Systems Ltd. .................................................. 161-166

Ashtech RTZ, Real-Time Kinematic GPS with OTF Initialization
Sergei Gourevitch, Frank van Diggelen, Xinhua Qin, and Mark Kuhl, Ashtech .................................................. 167-170
Session C1: Space Applications

An Autonomous GNSS-based Orbit Determination System for Low-Earth Observation Satellites
Jorge Potti, Juan Carlos Carmona, and Pelayo Bernedo, GMV S.A.; Pierluigi Silvestrin, ESA/ESTEC .................................................. 173-182

Results of a Automated GPS Tracking System in Support of Topex/Poseidon and GPSMet
Ronald Muellerschoen, Stephen Lichten, Ulf Lindqwister, and Willy Bertiger, Jet Propulsion Laboratory ............................................. 183-193

GPS Multipath Modeling and Verification Using Geometrical Theory of Diffraction
Suekun Gomez, Robert Panneton, and Penny Saunders, NASA/LBJ Space Center; Shian and Ba Lu, Lockheed Martin ...................... 195-204

Application of Fuzzy Logic and Multisensor Data Fusion Techniques to On-board GPS-based Spacecraft Navigation
Stefano Giacomini, University of Milano; Livio Marradi, LABEN S.p.A. ................................................................. 205-216

GPS Autonomous Relative Navigation and Time Transfer for Orbiting Space Vehicles
Duncan B. Cox, Jr., DBC Communications, Inc.; John D.W. Braden, Braiding Systems and Technology .............................................. 217-228

GPS Tracking Experiment of a Dree-Flyer Deployed from Space Shuttle
Bob Schutz, P.A.M. Abusali, Christine Schroeder, and Byron Tapley, University of Texas at Austin;
Michael Exner and Rick McCloskey, University Corporation for Atmospheric Research;
Russell Carpenter, Michael Cooke, and Samantha McDonald, NASA/Johnson Space Center;
Nick Combs, University of Houston; Courtney Duncan, Charles Dunn, and Tom Meehan, NASA/JPL .................. 229-235

GPS Receiver Design and Requirement Analysis for the Stanford Gravity Probe B Relativity Mission
Hirohiko Uematsu and Bradford Parkinson, Stanford University; E. Glenn Lightsey, NASA Goddard Space Flight Center .................. 237-246

National Satellite Testbed (NSTB) GPS Satellite Clock/Ephemeris Determination Analysis and Results
Scott Pogorelec, Mark Lorenz, Kelly Murdock, Brent Harding, Tim Cashin, and Donna Kraus, Stanford Telecommunications ........... 247-256

GPS Techniques for Navigation of Geostationary Satellites
Pascale Ferrage, Jean-Luc Issler, Genevieve Campan, and Jean-Claude Durand, French National Space Agency (CNES) ............... 257-268

Relative GPS Navigation for ATV Rendezvous
Michael Frezet, Herve Marcille, Virginie Pascal, and Jean Michael Pairot, Matra Marconi Space;
HubertBer?, Massimo Cislaggi, and Ulrich Thomas, European Space Agency ................................................... 269-278

Session D1: Student Competition Winners

Aircraft Tracking Using GPS Position and Velocity Reports
Ran Gazit, Stanford University ................................................................................................................................. 281-290

High Precision Highway Profiles Using Helicopter Borne ‘On-The-Fly’ GPS
Paul Hansen and Chris Joy, The University of Nottingham .................................................................................. 291-298

A New Concept for GPS Phase Ambiguity Resolution On-The-Fly:
The Maximum a Posteriori Ambiguity Search (MAPAS) Method
Christophe Macabiau, Laboratoire de Traitement du Signal et des Télécommunications de l’ENAC .............. 299-308

A New Navigation Algorithm Using Only Information From Measurement
Benlin Xu, University of New Brunswick .............................................................................................................. 309-318

A Prototype Portable Vehicle Navigation System Utilizing Map Aided GPS
Blake Bullock, The University of Calgary .............................................................................................................. 319-329

Efficient Ambiguity Search Using Genetic Algorithms
Zuofa Li, The University of Calgary ......................................................................................................................... 331-337

Airborne Gravimetry by GNS/INS A Comparison of Filtering Methods
Yousef Hammada, The University of Calgary ........................................................................................................ 339-347

Ambiguity Recovery for GPS Long Range Kinematic Positioning
Shaowei Han, The University of New South Wales .............................................................................................. 349-360

Session A2: Military Applications and Requirements

Use of the GPS Aided Inertial Navigation System in the Navy Standard Missile
for the BMDO/Navy LEAP Technology Demonstration Program
Todd Moore, Kevin Rudolph, and Frank Ziolkowski, Hughes Aircraft Co.; Alfred Luckau, Hughes Missile Systems Co. .................. 363-371

Integrated GPS/INS/SSAR/GMTI Radar Precision Targeting Flight Test Results
R. Guarino and Paul Isben, Westinghouse Norden Systems .................................................................................. 373-379
Anti-Jamming Performance of TIDGET in Guided Munitions Applications
Armando Montalvo, Bruce Johnson, and Alison Brown, NAVSYS Corporation ........................................ 381-390

Robust Implementation of Relative GPS Guidance
Mark Youhanaie, David Hartman, and Frank Ziolkowski, Hughes Aircraft Co.; Neeraj Pujara, Wright Laboratory ................. 391-398

A Global DoD-Optimized DGPS for Precision-Strike
Earl Blackwell, Mark Moeglein, and David Nakayama, SRI International .................................................. 399-411

Navigation Performance Analysis for the Edge Program
Donald Kelly and Pamela Harms, Sverdrup/TEAS; Capt. John Dargen, USAF; Chuck Eckert, Honeywell .................... 413-422

Preliminary Results from a GPS-based Portable Impact Location System
Jimmy Saunders and Miguel Cardoza ........................................... 423-430

Precise Absolute Navigation: An Evaluation of PPS Position Improvement
Bruce Hermann, Naval Surface Warfare Center; Stephen Malys, The Defense Mapping Agency ............ 431-436

GPS Translator for Artillery Projectiles – A Progress Report
George Wiles, US Army Research Laboratory; Jeff Smuk, Hittite Microwave Corporation .................. 437-441

The Reduction of Airborne Magnetic Noise Via GPS
L. Bobb, W. Gelatka, D. DePersia, A. Salik, and S. Swyers, Naval Air Warfare Center .................. 443-447

GPS Operational Control System Modernization: Alternative Architectural Concepts
Jaynarayan Lala and Laura Burkhardt, Draper Laboratory .................................................. 449-459

Session B2: DGPS Technology and Applications

Design of a GNSS: Coverage, Accuracy and Integrity
V. Ashkenazi, T. Moore, C. J. Hill, W. Y. Ochieng, and Wu Chen, The University of Nottingham ............................ 463-472

Differential GPS Evaluation at UK Airports
Hemant Mistry and Richard Farnworth, UK National Air Traffic Services ........................................ 473-479

Floating Differential GPS (FDGPS)
James L. Brown, Aydin Corporation (East) ........................................ 481-490

Characterization of Phase and Multipath Errors for an Aircraft GPS Antenna
C. Douglas Hardwick and Jeffrey Liu, National Research Council of Canada ........................................ 491-498

Precise Positioning Using GPS/GLONASS Carrier Phase and Code Phase Observables
David Walsh, Stuart Riley, John Cooper, and Peter Daly, The University of Leeds ........................................ 499-506

Differential GLONASS, Differential GPS and Integrated Differential GLONASS/GPS – Initial Results
Jacques Beser, Anushia Balendra, Eric Erpelding, and Sonia Kim, 3S Navigation ........................................ 507-515

Performance Evaluation of a Global IGS-Based Differential GPS System
Don English, Gene Howell, and Wang Tang, ARINC ........................................ 517-523

Satisfying Airport Operational Requirements Using Seamless GNSS Techniques, Procedures and Processing
Lois Pilley and Robert Pilley, DSDC ........................................ 525-532

Selective Availability via the Levinson Predictor
Timothy Barnes, Zeta Associates, Inc. ........................................ 533-542

Session C2: Space: Orbit and Attitude

GPS Attitude Determination and Navigation Flight Experiment
J. Kurt Brock, Rich Fuller, Brian Kemper, Dave Mleczko, J. Rodden, and Alfred Tadros, Space Systems/LORAL .................. 545-554

The GPS Attitude Determination Flyer (GADFLY): A Space-Qualified GPS Attitude Receiver on the SSTI-Lewis Spacecraft
Frank Bauer, E. Glenn Lightsey, Stephen Leake, Jon McCullough, James O’Donnell, Kate Hartman, and Roger Hart, NASA Goddard Space Flight Center ........................................ 555-562

Argos Navigation and Attitude Determination System
Jon Petway, Rockwell ........................................ 563-572

Experimental Results of Using the GPS for SFU Onboard Navigation
Tsutomu Ichikawa and Keiken Ninomiya, The Institute of Space and Astronautical Science;
Susumu Kumagai and Masaki Mistutake, Hitachi Ltd ........................................ 573-577

A Practical Demonstration of Low Cost Autonomous Orbit Determination Using GPS
Martin Unwin and Martin Sweeting, University of Surrey ........................................ 579-587
Applicability of GPS-based Orbit Determination Systems to a Wide Range of HEO Missions
Jorge Potti and Pelayo Bemedo, GMV S.A.; Alessandro Pasetti, ESA/ESTEC ................................. 589-598

Performance Evaluation of the GPS Yaw Bias Implementation
Yoaz Bar-Sever, Jet Propulsion Laboratory ................................................................. 599-611

Effect of GPS Orbit Accuracy on GPS-determined Topex/Poseidon Orbit
H. J. Rim, B. E. Schutz, P.A.M. Abusali, and B. D. Tapley, University of Texas at Austin ............. 613-617

Use of GPS for Precise and Operational Orbit Determination at ESOC
Tomás Martín Mur, John Dow, and Nicholas Bondarenco, European Space Agency; Stefano Casotto, Università Padova; Joachim Feltens, mbp Informationstechnologie GmbH; Carlos García Martinez, GMV S.A. .................. 619-626

Session D2: Wide Area Augmentation Systems

A Wide Area Augmentation System (WAAS) Service Volume Model and Its Use in Evaluating WAAS Architectures and Design Sensitivities
Walter Poor, Thomas Albertson, and Pauline Yen, The MITRE Corporation ................................ 629-637

An Algorithm for Inter-frequency Bias Calibration and Application to WAAS Ionosphere Modeling
Yi-chung Chao, Yeou-Jyh Tsai, Todd Walter, Changdon Kee, Per Enge, and Brad Parkinson, Stanford University ................................................................................................................... 639-646

Incorporation of Orbital Dynamics to Improve Wide-Area Differential GPS
Juan Ceva and Bradford Parkinson, Stanford University; Willy Bertiger, Ron Muellerschoen, and Thomas Yunck, JPL ................................................................. 647-659

Validation of the RTCA Message Format for WAAS
Yeou-Jyh Tsai, Per Enge, Yi-Chung Chao, Todd Walter, Changdon Kee, Jennifer Evans, Andrew Barrows, David Powell, and Bradford Parkinson, Stanford University ........................................................................ 661-670

The Ability of a RADGPS to Provide the Accuracy and Integrity Required for En-Route Navigation
Richard Farnworth, UK National Air Traffic Service; Stuart Jolley, Roke Manor Research; Andrew Lovett, Racial Avionics ................................................................. 671-676

Integrating WAAS with LAAS to Avoid Signal Spoofing
Vis Sankaran and Donald Benson, Dynamics Research Corporation ............................................. 677-684

Exact Formula for User Range Error in Wide Area Differential GPS

WAAS Sensor Interference Testing
Trent Skidmore, Ohio University; Mark Johnson, Rockwell International ....................................... 695-703

A Study for Performance Enhancements of the Asian-Australian GPS Augmentation System (AAAS)
Yanning Feng, Kurt Kubik, and Jizhang Sang, Queensland University of Technology; Jingtian Liu, Wuhan TU ................................................................. 705-711

Session A3: Precision Landing

FAA–Wilcox Electric Category IIIB Feasibility Demonstration Program Flight Test Results
W. Hundley, S. Rowson, and G. Courtney, Wilcox Electric; V. Wullschleger and R. Velez, FAA Technical Center; R. Benoist, Litton Aero Products; P. O’Donnell, MITRE/CAAS ......................................................................................... 715-726

FAA/OHIO University/United Parcel Service DGPS Autoland Flight Test Demonstration
Frank van Graas, David Diggle, and Maarten Uijt, Ohio University; Dave Lamb and Mark Dimeo, Systems Resources Corporation; Greg Kuehl and Robert Hilb, United Parcel Service ......................................................................................... 727-737

FAA/FEDSIM—E-Systems Cat IIIB Feasibility Demonstration Flight Test Preliminary Results
Glyn Romrell, Ron Brown, and Greg Johnson, E-Systems; Dave Kaufmann, NASA Ames .................................................. 739-753

Application of INS/GPS Systems Integration to Increase Performance of Automatic Landing Systems
Jochen Meyer-Hilberg and Harald Harder, Daimler-Benz Aerospace AG ........................................ 755-762

A340–DGPS Landing Experiment
Julie de Cevins, Airbus Industrie; Pascal Ponsot, Aerospatiale ................................................................................................................................. 763-772

FAA’s Cat III Feasibility Program: Status and Accomplishments
R. Braff and P. O’Donnell, The MITRE Corporation; V. Wullschleger, C. Mackin, and R. Velez, FAA Technical Center; R. Swider and P. Enge, Stanford University; F. van Graas, Ohio University; D. Kaufmann, NASA Ames Research Center ........................................................................ 773-780

GNSS Receiver Interference: Susceptibility and Civil Aviation Impact
Mark Johnson and Robert Erlandson, Rockwell .................................................................................. 781-791

Observed GPS Signal Continuity Interruptions
Stewart Cobb, David Lawrence, Jock Christie, Todd Walter, Y.C. Chao, David Powell, and Brad Parkinson, Stanford University .................. 793-795
**Session B3: Specialized User Equipment Technology**

**Development and Testing of a Mobile Pseudolite Concept for Precise Positioning**

**Precision Landing Tests with Improved Integrity Beacon Pseudolites**
Stewart Cobb, David Lawrence, Boris Pervan, Clark Cohen, David Powell, and Brad Parkinson, *Stanford University* .................................................. 827-833

**A Combined GPS/GLONASS High Precision Receiver for Space Applications**
Stuart Riley, Neil Howard, Eric Aardoom, and Peter Daly, *University of Leeds*; Pierluigi Silvestrin, *ESA ESTEC* .................................................. 835-844

**Integrated GPS/GLONASS Antenna for High Performance Applications**
Taymoor Hekmat and Norbert Niklasch, *ViCon Engineering GmbH*; Martin Maurer, *MAN Technologie AG* .................................................. 845-851

**Tracking Measurements From a Miniature GLONASS Receiver**
Oliver Leisten, Geraint Ffoulkes-Jones, Gerald Whitworth, and David Belton, *Navstar Systems Ltd.* .................................................. 853-859

**Power Minimization Techniques for GPS Null Steering Antenna**
Anton Gecan, *E-Systems*; Michael Zoltowski, *Purdue University* .................................................. 861-868

**Performance of a Miniature Dielectrically Loaded Volute Antenna**
Oliver Leisten and Geraint Ffoulkes-Jones, *Navstar Systems Ltd.* .................................................. 869-877

**An Effective GPS Application for Helicopter Operations**
William O'Keefe, *Newcomb Communication, Inc.* .................................................. 879-886

**Session C3: Maritime Applications**

**Verification of USCG DGPS Broadcast Parameters**
Mark Lunday, Joseph Spalding, and Marylouise Dowd .................................................. 889-897

**DGPS Positioning Accuracy Performance Analysis with RTCM Message Types 1/9 and 18-21 Using Various Receiver Technologies**

**Boosting Shipboard RAIM Availability**
James LaMance and Alison Brown, *NAVSYS Corporation*; Joseph Spalding, *US Coast Guard R&D Center* .................................................. 907-912

**The Virtual Anchor**
Glen Robertson, *Rhodan Marine Equipment*; John Webster, *Holst-Webster Enterprises* .................................................. 913-918

**Use of DGPS for an In-Water Acoustic Survey for the PTS SWIMSS**
Robert Reid, *Naval Undersea Warfare Center* .................................................. 919-923

**Autonomous Underwater Vehicle Navigation**

**Performance Analysis of the Interrupted Data Acquisition Receiver Obtained From Operational Missions**
Gerald Whitworth, *Navstar Systems Ltd.*; David Meldrum, *Dunstaffnage Marine Laboratory* .................................................. 935-940

**Results of Testing on a GPS-Based Compass**
Joseph Spalding and Mark Lunday, *US Coast Guard R&D Center* .................................................. 941-948

**The Use of GPS for Underwater Navigation, Sea Trial Results**
M. H. G. Thomas, *ACSA* .................................................. 949-955

**Session D3: GLONASS**

**The GLONASS System Status and Prospects for Development**

**The Place of GLONASS in the Radionavigation Plan of the CIS**
Vladimir Denisov, *Internavigation Research and Technical Center* .................................................. 971-984
The GLONASS and GLONASS-M Programs
V. Kazantsev, NPOPM ................................................................. 985-990

Ways of GLONASS System Advancing
Nicolay Ivanov, Vadim Salischev, and Alexander Vinogradov, RISDE ........................................... 991-1011

Marine Radiobeacon DGPS/DGLONASS Service and Regional Centers for Differential GLONASS/Alpha/Chayka Services
Pytor Bogdanov, Valery Chistyakov, Sergey Filatchenkov, Arvid Gevorkyan, and Vladlen Khimulin, Russian Institute of Radionavigation and Time .................................................. 1013-1020

GLONASS Approaches Full Operational Capability (FOC)
Peter Daly, The University of Leeds ............................................. 1021-1030

Evaluation of GLONASS Performance in Practical Applications: Comparison with GPS-Based Ionospheric TEC Values
Nestor Zarraoa, Esther Sardon, Dietmar Klähn, and Arne Jungstand, DLR-DFD Neustrelitz ........................................... 1031-1039

Processing GLONASS Carrier Phase Observations—Theory and First Experience
Alfred Leick and Jinye Li, University of Maine; Jacques Beser, 3S Navigation; Gerald Mader, National Geodetic Survey .......... 1041-1047

Differential GLONASS in Russia: The Ways of Development
Alexander Ganin, GLONASS Coordination Research and Information Center ............................................ 1049-1060

Kalman Filter Procedures for GPS/GLONASS-Signals
Norbert Niklasch, ViCon Engineering; Martin Maurer and Martin Haunschmidt, MAN Technologie AG; Walter Richert, LMU .... 1061-1068
