Proceedings

Interactive Multimedia '92

August 26-28, 1992
Arlington, Virginia

Sponsored by
Society for Applied Learning Technology

SALT
50 Culpeper Street, Warrenton, VA 22186
# Table of Contents

## Performance Track

4FRONT Multimedia Publishing Architecture  
Michael W. Farrell and Paul L. Radding ................................................................. 1

The Impact of Standards on the Quality and Usability of the Final Product  
Thomas E. Kroll ........................................................................................................... 5

A Comparison of the Retrieval Effectiveness of Electronic and Paper Implementations  
Carol B. MacKnight and Jill Baroni ........................................................................... 8

From the Exploration Age to the Information Age: Applying Multimedia Technology - Assisted Learning to Hydrographic Knowledge  
David Pugh, BSc, CLS, J.G. Michael Parkes, PhD and Louis W. Stokes, PhD ..................... 14

Expert Performance Systems: Automatic Generation  
Angus Reynolds and Roberto Araya ............................................................................. 19

Multimedia Technology in Support of Educational Reform  
Beverly Simpson and David E. Stone, Ph.D. .................................................................. 24

Design Considerations for Implementing Hypertext in an Interactive Performance Support System  
Mary F. Whiteside, Ph.D and J. Alan Whiteside, Ph.D ......................................................... 29

## CD-ROM Track

A Cardiology Program on CD-I  
Antonino Abbolito, MD and Cesare Greco, MD ............................................................. 33

BPC: A New Approach to Computer-Based Training  
Marianne D. Acovelli and Robert J. Campbell ................................................................ 36

Use of CD-ROM in Schools  
Shu H. Chen .................................................................................................................. 38

The Application of a Multimedia Authoring System to Real Estate Multiple Listing Services  
Andrew Lloyd-Williams ............................................................................................... 41

Presenting Russian Culture: Interactive Hypermedia Approach  
George Mitrevski ........................................................................................................... 47

Testing Compact Discs for Longevity  
Denis Oudard ................................................................................................................. 51

Utilizing CD-ROM Databases and Neural Network Software for Analysis and Decision Making  
Dr. William G. Perry, Jr. ............................................................................................... 55

Virtual Environment Training: Auxiliary Machinery Room (AMR) Watchstation Trainer  
Dennis C. Hribar, Ed.D., David C. May and James A. Probsdorfer ...................................... 57
Education Track

Peer-Supported, HyperMedia-Based Teacher Education
Dr. Gertrude W. Abramson .................................................................65

Transforming Science Lectures Into Multi-Media and Self-Paced Environment:
A Partnership between an Institute of Higher Education and a Public School
Stephanie Caravello-Hibbert and Aviva Adir ........................................68

Multimedia Potential and 1990s Reality: Examining the Administrative
Computer Component
L. W. Childers, Ph.D., Louis V. Paradise, Ph.D. and Chadwin B. Childers, ..........72

The “Exploded” Case Study: Applications of Technology to International
Executive Education
Dr. Ruth V. Curtis and Myke Gluck ......................................................76

Multibooks: The Teaching Systems of the Next Generation
Daniel E. Emmons .............................................................................82

Multimedia in Energy and Human Biology Programs
Susannah Glusker ..............................................................................87

Multimedia for First Degree Courses - a U.K. Experience
Maurice Hart, Silvia Scott .................................................................90

“Carpal Tunnel Syndrome”
Richard J. Hodach M.D.Ph.D and Emory Clark ...................................92

The Cost Benefits of Distance Learning Technologies in the Classroom
Tara D. Knott, Ph.D. ...........................................................................94

An Application of Hypermedia-Assisted-Instruction (HAI) in Second Language Learning
Liu, Min ............................................................................................98

Learning Theory, Computer Functions, and Instructional Design
John Henry Martin .............................................................................104

Integrating QuickTime Video Into a Computer-based Political Science Simulation
Lawrence C. Ragan ...........................................................................105

Converting “Conventional” Training to “Interactive” Training
Katriel Reichman ................................................................................108

“A Fundamental Transformation of the Student Market for Higher Education”
William M. Smith .............................................................................110

Blazing a New Trail for Local History Studies: Creating a Localized Video
Laserdisc Curriculum Package
Alan Walker and Karla Reiss ..............................................................114
Development Track

Border Clash: A Study in Graphic Interface Design
Bill Aggen, Ronald J. Gregory, and Marc Montefusco ................................................................. 116

Planning and Managing CBI Projects; Road-Signs Along the Journey
Scott Anderson and Marcia Gibson, Ed.D ................................................................. 118

Authoring System Capability Data Base
Gerry Costello ........................................................................................................ 122

Development with MacroMind Director and Windows Player
David Davis ........................................................................................................ 125

Decreasing the Risk of Adopting New Interactive Instructional Delivery Technologies
Verl E. Dennis, Ph.D ........................................................................................................ 128

From Chalkboard to Interactive Video in Two Years
Mary Garrett ........................................................................................................ 131

A Descriptive Tool for Designing and Evaluating Interactive Learning Systems
Dale Y. Hoskisson ........................................................................................................ 134

Multimedia PC: Promises and Problems
Eitaro Kawaguchi, Jack A. Taylor and Kimberly C. Walls ................................................................. 139

Testing Goes Graphical
Dana Alan Koch ........................................................................................................ 142

Universal Laptops: Implications for Learning
Paul Mareth ........................................................................................................ 146

The Appropriate Use of Voice Recognition in Computer-Based Learning Materials
William D. Milheim ........................................................................................................ 149

Flowcharting: Where Are We Now?
Neil Mitchell ........................................................................................................ 152

Designing an Interactive Information System: A Retrospective
Dr. Leonard O. Nasman ........................................................................................................ 156

Two Platform Development of an Interactive Package for Introductory Economics
Gerald C. Nelson ........................................................................................................ 158

Using Instructional Design Software
Richard A. Ranker and Michael L. McKim .................................................................................. 163

Multimedia and the Goals of Higher Education
Terry M. Savage and Karla E. Vogel .................................................................................. 176

Designing Interactive Courseware for a Multi-Window, Multi-Monitor Multimedia Environment: A Multitude of Decisions
Curt Shreiner, Ed.D ........................................................................................................ 179

Developing an Interactive Training Program and a Custom Authoring System at the Same Time
Alan Weiler ........................................................................................................ 182

Making the Multimedia Decision “Strategies for Success”
Dr. Elizabeth E. Wright ........................................................................................................ 185
Training Track

Developing Interactive Public Information Kiosks: The SCS Conservation Theater
Dr. Deborah Blank ................................................................. 192

Economical High Quality Training for Complex Systems
Betty Browning, Karen Snapp, John “JW” Wilkinson, Earl Johnson ..................... 194

Rural Leaders Face the Solid Waste Management Crisis: The Interactive
Computer Simulation “It’s in Your Hands”
Judith B. Chandler, Ed. D. ................................................................ 198

A Hypertext and Interactive Video Training System: A Case Study
Ralph Chesek ........................................................................... 199

“A Guide To The Developmental Procedures For Producing An Interactive Video
For The Delivery Of Information To Patients Suffering From Kidney Disease”
Elaine DeRosa, M.Ed. .................................................................. 201

Benefits and Challenges of Distributing Multimedia Over
Local and Wide Area Networks
William Eager ........................................................................... 205

Interactive Multimedia: Not Just For Self-Paced Learning
Andrea Granick ......................................................................... 208

Using Interactive Multimedia to Improve Reading and Writing Skills
Nancy W. Kenworthy ................................................................... 210

Model Training Program For Reserve Component - A CBI Pilot Project
Mahima Ranjan Kundu, Ph. D. ..................................................... 213

Delivery of Pharmaceutical Sales Training
John Moxley, Ph.D. ..................................................................... 215

Buying Multimedia Courseware for the Government
Donald N. Hiemstra and Larryetta M. Schall ........................................ 218

Education & Training in the Public Sector Via Live Interactive Video
Westley Sholes and Vicki Edwards ............................................... 221

SOLO (Simulated On-Line Operations) A Gas Control Simulator
for Natural Gas Companies
Roy Wennerholm, Jr. .................................................................. 224
