

PROCEEDINGS OF THE SECOND
INTERNATIONAL CONFERENCE

ON

SOIL MECHANICS AND
FOUNDATION ENGINEERING

ROTTERDAM
JUNE 21 TO 30 - 1948

VOLUME III

TABLE OF CONTENTS

VOLUME III

SECTION I : THEORIES, HYPOTHESES, CONSIDERATIONS OF A GENERAL CHARACTER

Page

Sub-section Ib : GEOLOGY AND SOIL MECHANICS

Ib 2	Soil mechanics and geology. A. von Moos and L. Bjerrum (Switzerland)	1
Ib 3	Relation of soil mechanics and geology in foundation exploration Lower Mississippi Valley. W.J. Turnbull and H.N. Fisk (U.S.A.)	3
Ib 4	Some geological aspects of the problems of soil genesis and soil classification. W.J. Turnbull and H.N. Fisk (U.S.A.)	6

Sub-section Ic : PHYSICAL AND PHYSICO-CHEMICAL PROPERTIES OF SOILS

Ic 4	Some fundamental factors influencing the properties of soil materials. Ralph E. Grim (U.S.A.)	8
Ic 5	Thermal conductivity of soil. M.S. Kersten (U.S.A.)	12
Ic 6	For a systematic study of the properties of soils as related to their permanent characters and to their non-permanent characters. R. Spronck (Belgium)	15

Sub-section Id : STRESS-STRAIN RELATIONS; CONSOLIDATION

Id 5	A method for estimating the load settlement characteristics and bearing value of clays and clay-soils from unconfined compression and tri-axial compression tests. D.M. Burmister (U.S.A.)	18
Id 6	Time effect in connection with consolidation tests. R. Haefeli and W. Schaad (Switzerland)	23
Id 7	The first law of thermodynamics and the consolidation process. E.C.W.A. Geuze and C.M.A. de Bruyn (Netherlands)	29
Id 8	A formula combining the Terzaghi load-compression relationship and the Buisman secular time effect. A.W. Koppejan (Netherlands)	32

Sub-section Ie : SHEARING STRENGTH AND EQUILIBRIUM OF SOILS

Ie 12	Shearing strength and water content, a complement to the shearing theory. R. Haefeli (Switzerland)	38
Ie 13	On the bearing power of soil in a two-dimensional problem. T. Mizuno (Japan)	44
Ie 14	Soil-gliding under the influence of an infinite strip of load. L. Šuklje (Jugo-Slavia)	49
Ie 15	Protracted sliding surface. L. Bendel (Switzerland)	53
Ie 16	State of stresses in a heavy soil mass. C. Torre (Austria)	57

Sub-section If : EARTH PRESSURE

If 3	Minimum value of earth pressure J. Jáky (Hungary)	61
If 4	Novel theory of earth pressure. J. Jáky (Hungary)	65

Sub-section Ig : STRESS DISTRIBUTION

Ig 7	Pavement slabs on non-rigid foundations. A.H.A. Hogg (England)	70
Ig 8	Over the plastic range in the semi-infinite mass. H. Borowicka (Poland)	75
Ig 9	Influence values for estimating stresses in elastic foundations. R.E. Fadum (U.S.A.)	77

Sub-section Ih : VIBRATIONS AND MATHEMATICAL PROBLEMS

Ih 1	Relaxation methods. D.N. de G. Allen (U.S.A.)	85
Ih 2	The natural oscillation of ground and industrial foundations. J.H.A. Crockett and R.E.R. Hammond (England)	88

SECTION II : LABORATORY INVESTIGATIONS

Sub-section IIb : IDENTIFICATION TESTS

IIb 2	The laboratory determination of the volume weight and air space of stoney soils. E.W. Russell (England)	94
IIb 3	Notes on some Canadian „Silts“. R.F. Legget and F. Lionel Peckover (Canada)	96

		Page
IIb 4	Analysis of the latest American tests on soil capillarity. D.P. Krynine (U.S.A.)	100
IIb 5	Soft rock ("Kurzawka") A.Pogány (Poland)	105
Sub-section IIId : <u>TRIAXIAL TESTS</u>		
IIId 6	The stability of granular and cohesive materials. N.W. McLeod (U.S.A.)	110
IIId 7	Application of triaxial compression tests to stability analyses of rolled-fill earth dams. D.F. Glynn (Australia)	117
IIId 8	Critical density of some Dutch sands. E.C.W.A. Geuze (Netherlands)	125
IIId 9	The dynamic triaxial trials. L.Bendel (Switzerland)	131
Sub-section IIe : <u>DIRECT SHEAR TESTS</u>		
IIe 3	Compression, an important factor in the shearing test. E.C.W.A. Geuze (Netherlands)	139
IIe 4	Examination of connection between the change of porosity and shearing stress of tied ground due to mon-axial loads. A. Pogány (Poland)	143
IIe 5	Soil friction coefficient as a function of water content. R. Ariano (Italy)	144
IIe 6	Shearing tests on cohesive soils. W. Steinbrenner (Australia)	150
Sub-section IIIf : <u>ELECTRO-OSMOSIS</u>		
IIIf 2	Results of laboratory investigations on the electrical treatment of soils. E.C.W.A. Geuze, C.M.A. de Bruyn and K. Joustra (Netherlands)	153
Sub-section IIig : <u>MISCELLANEOUS</u>		
IIig 4	Specific heat tests on soils. M.S. Kersten (U.S.A.)	158
IIig 5	Apparatus for measuring thermal conductivity of soil. M.S. Kersten (U.S.A.)	162
IIig 6	Descriptions of tests carried out on a chalk-clay soil in connection with the foundations for the Aeronautical National Establishment at Bedford. F.S. Strongman (England)	166
IIig 7	A laboratory study of the settlements of loaded rectangular plates into soft soil. H.W.W. Pollitt, W.A. Lewis and P.H.T. Lewis (U.S.A.)	172
IIig 8	Some laboratory tests on chalk. G. Wilson (England)	183
IIig 9	The investigation of decomposed granite in Hong-Kong for use as a stabilised base course material. J.K.M. Henry and H. Grace (England)	187
IIig 10	Photographic method for determining the soil action beneath footings. M.G. Bekker (Canada)	193
IIig 11	Tests on bearing capacity of shallow foundations on horizontal top surfaces of sand fills and the behaviour of soils under such foundations. H. Peynircioğlu (Turkey)	194
IIig 12	Use of micro photography and density-testing methods at researches on distribution of tension and deformation condition of sandy and tied soil. A. Pogány (Poland)	206
IIig 13	Viscous flow tube model. R.A. Barron (U.S.A.)	209
 <u>SECTION III : FIELD INVESTIGATIONS</u>		
Sub-section IIIb: <u>MEASUREMENTS OF SPECIAL SOIL PROPERTIES</u>		
IIIb 8	A method for determining the resistance of the subsoil by driving. S. Stump (Switzerland)	212
Sub-section IIIId: <u>VIBRATIONAL RESEARCH</u>		
IIIId 2	Soil Vibrations. H.J. Oosterbeek Jr. (Netherlands)	214
IIIId 3	Dynamic investigations. L. Bendel (Switzerland)	218
Sub-section IIIIf: <u>AREAL STUDIES</u>		
IIIIf 1	Regional study of the soils from São Paulo. E. Pichler (Brazil)	222
IIIIf 2	Areal studies of soils in New Jersey. A.C. Ely (U.S.A.)	227

SECTION IV : STABILITY AND DEFORMATIONS OF EARTH CONSTRUCTIONS

Sub-section IVb : DAMS AND LEVEES

Page

IVb 4	Pore pressure assumptions for stability studies of earth dams. A.Rufenacht (Australia)	230
IVb 5	Estimating construction pore pressures in rolled earth dams. J.W.Hilf (U.S.A.)	234
IVb 6	Stability analysis in the design of earth and rockfill dams R.C. Clarke (Australia)	240
IVb 7	Ten years pore pressure measurements. F.C. Walker and W.W. Daehn (U.S.A.)	245
IVb 8	Earth dam design and construction practices of the Bureau of Reclamation. F.C. Walker and W.E. Collins (U.S.A.)	250
IVb 9	Earth-fill overflow dams in flood control. P. Baumann (U.S.A.)	253

Sub-section IVc: EXCAVATIONS AND SLOPES

IVc 8	California experience in stabilizing earth slopes through the installation of horizontal drains by the hydrauger method. Th.E. Stanton (U.S.A.)	256
IVc 9	Underpinning and under-drainage to check earth sliding and settlements at a large cement plant. C.S. Proctor (U.S.A.)	260
IVc 10	Slope stability studies for the Delta-Mindota Intake Canal. W.H. Wolf and W.G. Holtz (U.S.A.)	268
IVc 11	Failure of a big retaining wall at "Wienfluss" creek-shore in Vienna. R.F.Tillmann (Austria)	274
IVc 12	Treatment of frost sloughing slopes. K.S. Lane (U.S.A.)	281

SECTION V : EARTH PRESSURE; STABILITY AND DISPLACEMENTS OF RETAINING CONSTRUCTIONS

Sub-section Va : EARTH PRESSURE AGAINST RIGID VERTICAL WALLS

Va 2	Soil mechanics in relation to the design of large dry docks. D.H. Little (England)	284
Va 3	Definition of stability against overturning of retaining walls. A. Paduart (Belgium)	287
Va 4	Reduction of lateral cohesive soil pressure on quaywalls by use of sand dikes. H. Epstein (U.S.A.)	291
Va 5	A study of retaining wall failures. R.B. Peck, H.O. Ireland and C.Y. Teng (U.S.A.)	296

Sub-section Vb : EARTH PRESSURE AGAINST FLEXIBLE VERTICAL WALLS

Vb 5	Measurements of pressures against a deep shaft in plastic clay. R.B. Peck and S. Berman (U.S.A.)	300
Vb 6	Upon the deflection and strength of anchored bulkheads. B.S. Browzin (France)	302
Vb 7	Effect of boundary conditions on lateral earth pressure. G.P. Tschebotarioff and J.D. Welch (U.S.A.)	308

Sub-section Vc : EARTH PRESSURE AGAINST UNDERGROUND CONSTRUCTIONS

Vc 2	Earth pressure in mining. F.K.Th. van Iterson (Netherlands)	314
Vc 3	Earth pressure on horizontal circular conduits. Public Works, Amsterdam (Netherlands)	317
