# CONTENTS

## PART A

### Invited Papers

- Why Do We Need Nuclear Power? Energy Policy in the Light of History of Civilization  
  *Susumu Yoda* ................................................................. xix
- Current Nuclear Safety Issues  
  *Hideo Uchida* ................................................................ xxiii

### BASIC TECHNOLOGICAL ADVANCES

#### Fundamental Thermal Hydraulics

- Numerical Analysis for Unsteady Thermal Stratified Turbulent Flow in a Horizontal Circular Cylinder  
  *Jang-Sun Ahn, Eun-Ki Kim, Seoug-Beom Kim, Hag-Ki Youm, and Man-Heung Park* ....................................................... 1
- Neutron Radiography Experiments for Verification of Soluble Boron Mixing and Transport  
  *Madeline Anne Feltus and G. Michael Morlang* ......................... 9
- Three Dimensional Calculations of the Primary Coolant Flow in a 900 MW PWR Vessel: Steady State and Transient Computations  
  *A. Martin, D. Alvarez, and F. Cases* ........................................ 25
- Effects of Area and Radius of Curvature of Downward-Facing Curved Surfaces on Pool Boiling  
  *Mohamed S. El-Genk and Cheng Gao* ...................................... 33
- Experimental Study of the Effects of Flow Inserts on Heat Transfer and Critical Heat Flux  
  *S. Doerffer, D. C. Groeneveld, and J. R. Schenk* ....................... 41

#### Structural Analysis and Design of Nuclear Facilities

- Design and Analysis of a Prestressed Concrete Reactor Vessel for a 2000 MWe Super Large-Sized BWR  
  *R. J. James, Y. R. Rashid, P. F. Gou, C. D. Sawyer, S. Tanaka, Y. Shirai, M. Mori, and I. Takekuro* .................................. 51
- Seismic Analysis of Spent Nuclear Fuel Storage Racks  
  *Sudhir J. Shah, J. R. Biddle, S. M. Bennett, C. B. Schechter, G. A. Harstead, and F. Marquet* ........................................... 67
- Energy Dissipation in Elastomeric Isolators Subjected to Seismic Forces  
  *James H. Terhune and K. Karim-Panahi* .................................. 77
- Seismic Design Practice for Indian Pressurized Heavy Water Reactors  
  *A. G. Chhatre, S. M. Ingole, and S. A. Bhardwaj* ..................... 85
- Study of Peak Broadening Effect in Floor Time Histories  
  *R. S. Soni, H. S. Kushwaha, S. C. Mahajan, and A. Kakodkar* ....... 95

#### Numerical and Experimental Two-Phase Flow Developments — 1

- Direct Numerical Simulation of Stratified Gas-Liquid Flow  
  *P. Lombardi, V. De Angelis, and Sanjoy Banerjee* ...................... 101
- Modeling of Condensation in Steam-Water Stratified Flow Based on Convective Heat Transfer  
  *Vladimir D. Stevanovic* ......................................................... 111
- An Analytical Study on the Moisture Separation Performance in Dryers  
  *Yoshiro Kudo, Nobuatsu Tanaka, and Hiroshi Miyano* .................. 123
- Investigation of Two-Phase Flow Characteristics in the BWR Steam Separator: Air-Water Experiment and 3D Two-Fluid Model Analysis  
  *S. Yokobori, M. Akiba, H. Terasaka, Y. Kudo, F. Koh, and T. Saito* .......................................................... 131
Flow Characteristics of Bubbly Countercurrent Flow
Masanori Aritomi, Makoto Nakajima, Shirong Zhou, Junji Mizoguchi, Yasushi Takeda, Michitugu Mori, and Yuzuru Yoshioka... 141

Advances in Reactor Pressure Vessel Technology
CSNI Project for Fracture Analysis of Large-Scale International Reference Experiments (FALSIRE II)
B. Richard Bass, C. E. Pugh, J. A. Keeney, J. Sievers, and H. Schulz... 149
NESC: The Network for Evaluating Steel Components
Roger C. Hurst, Brian Hemsworth, and John B. Wintle... 163
Preliminary Assessment of the Effects of Biaxial Loading on Reactor Pressure Vessel Structural-Integrity-Assessment Technology
W. E. Pennell, B. Richard Bass, J. W. Bryson, T. L. Dickson, W. J. McAfee, and J. G. Merkle... 173
A Methodology for Determining Fabrication Flaws in a Reactor Pressure Vessel
George J. Schuster, Steven R. Doctor, and Fredric A. Simonen... 187

Advances in Computational Thermal Hydraulics — I
Temperature Field and Transport Phenomena Across a Density Interface
Mario De Salve, Giovanni Del Tin, and Bruno Panella... 195
Physical Interpretation of Geysering Phenomena and Periodic Boiling Instability at Low Flows
Romney B. Duffey and Upendra S. Rohatgi... 207
Development of Generalized Integral Forms of Closure Relationships for Wall Friction, Heat and Mass Transfer Factors in Non-Homogeneous Coolant Flows for Assessment of Limits and Capabilities of System Codes
Y. N. Kornienko and A. I. Nevinitsa... 217
Ideal Scaling Up of BETHSY Experimental Results
Stojan Petelin, Borut Mavko, and Igor Ravnikar... 231

Thermal Hydraulics of Nuclear Safety and Reliability — I
Non-Condensable Gas Effects in ROSA/AP600 Small-Break LOCA Experiments
Hideo Nakamura, Yutaka Kukita, Roy A. Shaw, and Richard R. Schultz... 237
Measurements of Turbulent Flow in Rod Bundles With Neighboring Different Spacer Grids
Sun Kyu Yang and Moon Ki Chung... 245
Density Wave Oscillation Beyond Dryout Under Forced Circulation
Hiroyasu Mochizuki... 253
Vertical Countercurrent Flow Limitation Phenomena Under Oscillatory Gas Flow
Jae Young Lee and Jen-Shih Chang... 261
Simulation of PWR Plant by a New Version of TRAC-PF1 Code Including a Three-Dimensional Neutronic Model and a Transport Boron Model
G. Alloggio, D. Basile, E. Brega, R. Guandalini, and L. Pollachini... 1019

Advanced Reactor Thermal Hydraulic Safety — Natural Circulation
The Study and Analysis of the Capacity on Natural Circulation in Pressurized-Water Reactor
Zhang Jinling, Guo Yujun, Su Guanghui, Qiu Suizheng, Jia Dounan, and Yu Zhenwan... 269
Analysis of Flow Reversal Test
Lap Y. Cheng and Paul R. Tichler... 275
Experimental Study on Two-Phase Natural Circulation Flow Instability
Xibin Xu, Jijun Xu, and Ping’an Yu... 285
Study on Two-Phase Natural Circulation Flow Instability by Using Bifurcation Theory
Xibin Xu, Jijun Xu, and Xiaodong Sun... 291
Modeling of a Natural Circulation Loop at Low Pressure
Bao Wen Yang, Wen-Yi Ouyang, and Thomas J. Dougherty... 297
Advances in Numerical Simulation of Steam Explosions — I
A Different Approach to Fragmentation in Steam Explosions
Robert E. Henry and Hans K. Fauske............................................. 309
Developmental Assessment of IFCI 6.0
Alfred W. Reed, Michael F. Young, and Rodney C. Schmidt................ 317
The Occurrence Condition of Spontaneous Vapor Explosions
Kinuhiito Matsumura and Hideki Nariai........................................ 325
Development of the VESUVIUS Model and Analysis of the Premixing Phase of an
Ex-Vessel Steam Explosion
Karen Vierow, Masanori Naitoh, Katsuhiko Nagano, and Kazuhiro Araki ........................................... 333

Computational and Experimental Two-Phase Flow Developments — I
Visualization of a Gas-Liquid Metal Two-Phase Natural Flow Circulation by a Real-Time
Neutron Radiography Technique
G. D. Harvel, J. S. Chang, J. C. Campeau, K. Uchimura, T. Matsumoto, and M. Kanzaki................................. 343
HERMES T: French Experimental Facility for Measurements of Transverse Flows and
Assessment of the Corresponding Risk of Vibrations in Heterogeneous Cores
D. Barbier, M. Moreau, and J. Noailly................................................ 351
Fluid Flow and Fluid Free Surface Interaction Using Particle Image Velocimetry
Olivier G. Philip, Yassin A. Hassan, and Koji Okamoto.............................. 359
Experimental Study on the Instability of Pressure Balance Injection System (PBIS)
Koji Okamoto, Hideyuki Teshima, and Haruki Madarame........................ 367
Experimental Study on the Stability Characteristics of Two-Phase Flows in Parallel Boiling
Channels Under Natural-Circulation Conditions
Heru Kuncoro, Kenichi Iwahashi, Yan F. Rao, and Kenji Fukuda.............................. 373

Two-Phase Flow and Heat Transfer Fundamentals — I
Thermal Entrance Length in Falling Liquid Film Heat Transfer
M. Erol Ulucakli............................................................................... 385
Parametric Study of Boiling Heat Transfer in Porous Media
Baolan Shi, Barclay G. Jones, and Chin Pan......................................... 393
Influence of Gas Flow to Heat Transfer in Falling Films
Reiner Numrich............................................................................. 403
Dynamic Simulation of Falling Film Apparatus
Ralf Mayer and Reiner Numrich...................................................... 409

Advances in Stability Analysis
Two-Phase Flow Instabilities in Helical Tubes of Once-Through Steam Generator
Fangde Zhou, Shaoping Shi, and Mingsheng Hu.................................... 419
MASC: A Statistical Approach for DNBR Limits
Lars Nordström and Thomas Rodack................................................ 425
Analysis of Coupled Nuclear/Thermal Instabilities of Two-Phase Flows in Parallel Boiling
Channels
M. Uehiro, Y. F. Rao, and K. Fukuda................................................ 433
On the Static and Dynamic Instabilities of Two-Phase Flows in a Boiling Channel With
Thermo-Neutronic Coupling
Y. F. Rao, K. Fukuda, and S. Funamoto............................................. 445

Materials Issues in Nuclear Applications
Aspects of Burst Safety of Prestressed Cast Iron Pressure Vessel
Dieter Bounin and Ernst-Peter Warnke............................................. 455
Nonlinear Finite Element Analysis of Nuclear Reinforced and Prestressed Concrete
Containments up to Ultimate Load Capacity
Welding Residual Stress Improvement in Internal Components by Water Jet Peening
K. Enomoto, Katsuhiko Hirano, M. Hayashi, and E. Hayashi......................... 471

xiii
A Perspective on Thermal Annealing of Reactor Pressure Vessel Materials From the Viewpoint of Experimental Results
Shafik K. Iskander, Mikhail A. Sokolov, and Randy K. Nanstad ................................................................. 479

A User-Friendly System for Evaluation of Fracture Mechanics Parameters Using an Object-Oriented Programming Approach
Shinobu Yoshimura, H. Kawate, G. Yagawa, and Y. Wada ................................................................. 493

Modelling Considerations for Large Deformation Impact Problems
Jeffrey M. Lacy and Gregory K. Miller ................................................................. 497

The Evaluation of Erosion-Corrosion Problems in Taiwan PWR Carbon Steel Piping
Kuen Ting, Yin Pang Ma, and Hiong June Chao ................................................................. 503

Maximum Stress of Interlayer Steel Plates in Elastomeric Isolator
Mineo Takayama and Keiko Morita ................................................................. 1029

PART B

Advances in Thermal Hydraulic Computer Codes for Reactor Analysis
Franck David .................................................................................................................... 509

Development of a WWER-Specific Validation Matrix for the Assessment of Thermalhydraulic Codes
K. Liesch, M. Réocreux, A. Suslov, and S. Zaytzev ............................................................................ 1009

Enhancing the Scope of Applications of Standard Thermal Hydraulic Codes by Linking
With Others
Zoran Stosic ....................................................................................................................................... 517

Development of a LOCA Analysis Code for the Supercritical-Pressure, Light-Water-Cooled Reactors
Jong Ho Lee, S. Koshizuka, and Y. Oka ..................................................................................... 533

Systematic Void Fraction Studies With RELAP5, FRANCESCA and HECHAN
Zoran Stosic and Gerhard Preusche ..................................................................................... 543

Human Health Effects of Low Level Radiation
Numerical Analysis of the PHEBUS Containment Thermal Hydraulics
H. Terasaka, H. Okada, K. Akagane, and A. Makita ........................................................................... 557

Advances in Liquid Metal Reactor Technology
Review of Design Basis Accident for Large Leak Sodium-Water Reaction for PFBR
P. Selvaraj, G. Vaidyanathan, and S. C. Chetal ................................................................................. 567

Thermal Hydraulic Analysis of PFBR Model
A. Rajakumar, G. Vaidyanathan, S. C. Chetal, and S. B. Bhoje .................................................................. 575

Thermal Hydraulic Design in Support of PFBR

The Simulation of Acoustic Propagation Within SG Water Leak Detection System
Takehiko Suzuki, Tsutomu Shioyama, Noriyuki Takeshima, Hirokazu Karasawa, Syuichi Sasaki, Shoichi Ota, and Makoto Kai ............................................................................................................ 591

Development of Neural Network Driven Fuzzy Controller for Outlet Sodium Temperature of DHX
Kyoichi Okusa, Shinji Yoshikawa, Kenji Ozawa, and Akira Endou ................................................................ 599

Development of Under Sodium Inspection Techniques for FBR

The Development of 3-D Image Processing Acoustic Simulator for Under Sodium Viewing Technology
Takehiko Suzuki, Tsutomu Shioyama, Hirokazu Karasawa, Hiromitsu Furukawa, and Takako Ashida ................................................................................................................................. 615
The Design of Seismic Isolated Demonstration FBR Plant
Tatsutoshi Inagaki, Yukio Watanabe, Masahiro Ueta, Kohei Tarutani, Yoji Shibata, Keizo Okada, and Yuji Hayashi

Computational and Experimental Developments
Experimental Study on Heat Transfer Characteristics of a High-Temperature Gas-Gas Heat Exchanger With Helically Coiled Tube Bundles
Yoshiyuki Inagaki, Hiroshi Koiso, Ikwo Ioka, and Yoshiaki Miyamoto
Yasuo Kabata, Ryo Nakajima, and Kazunori Shioda
Contact Heat Transfer and Thermal Contact Conductance Between Nonconforming Surfaces in an Abrupt Contact
R. K. Kumar and V. D. Kroeger
An Evaluation of the Monte Carlo Simulation of SPECT Projection Data Using MCNP and SimSPECT
Elizabeth C. Selcow, Andy B. Dobrzeniecki, Jacquelyn C. Yanch, An Lu, and Marie-Jose Belanger

Two-Phase Flow and Heat Transfer Fundamentals — II—IV
Influence of Two-Phase Flow Characteristic on Critical Heat Flux in Low Pressure
Akira Inoue and Sangryou Lee
Compressed Air Energy Storage System Two-Phase Flow Experiment
Hiroshige Kumamaru, Iwao Ohtsu, Hideo Murata, Yutaka Kukita, Mamoru Akiyama, Hirotada Ohashi, Masaharu Goto, Nobukazu Tanaka, Tomio Okhawa, Yuji Ono, Yoshiyuki Hatta, and Kazuyuki Yoneyama
Steam-Water Two-Phase Flow in Large Diameter Vertical Piping at High Pressures and Temperatures
Hisham A. Hasanein, Albert M. C. Chan, Masahiro Kawaji, and Yuzuru Yoshioka
An Analytical Investigation Into the Performance of Centrifugal Pumps Flowing Two-Phase Non-Condensable Mixtures
J. Douglas Sterrett, Roy W. Knight, and Joe W. Reece
Study of Characteristics of Void Fraction in Vertical Countercurrent Two-Phase Flow by Neutron Radiography
Masahito Matsubayashi, Yukio Sudo, and Katsushiro Haga
Study of Propagative Collapse of a Vapor Film in Film Boiling
Hiroyasu Ohtake, Yasuo Koizumi, and Hitoshi Hasegawa
Instability of Single-Phase Natural Circulation Under Multiple Loops
Akira Satoh, K. Okamoto, and H. Madarame
A Numerical Study of Bulk Evaporation and Condensation Problem
Zhongtao Ding and Samim Anghaie
Simulation of Two-Phase Flow Using Lattice Gas Automata Methods
Akira Tsumaya, Hirotada Ohashi, and Mamoru Akiyama
Analysis of Energies of Stationary Bubbles at Liquid Pool Surfaces and the Subsequent Droplet Release Due to Bubble Burst Based on RESUS Code Calculations
The Modelling of Flooding Conditions in a PWR Downcomer
W. M. Dempster
TRAC Analysis of an 80% Pump-Side, Cold-Leg, Large-Break Loss-of-Coolant Accident for the Westinghouse AP600 Advanced Reactor Design
James F. Lime and Brent E. Boyack
Flow and Pressure-Induced Transient Analysis of the Supercritical-Pressure, Light-Water-Cooled and Moderated Reactor
Yasushi Okano, Seiichi Koshizuka, and Yoshiaki Oka
Advances in Flow Field Analysis and Testing

Growth Mechanism of Self-Induced Sloshing Caused by Vertical Plane Jet
Masashi Fukaya, Haruki Madarame, and Koji Okamoto ............................................. 781

Self-Induced Oscillation of Free Surface Coupled With the Axisymmetric Jet and Structure
Satoshi Someya, Koji Okamoto, and Haruki Madarame ............................................ 789

Numerical Simulation on Growth Mechanism of Self-Induced Sloshing Caused by
Horizontal Plane Jet
Souichi Saeki, Nobukazu Tanaka, Haruki Madarame, Koji Okamoto, and
Masashi Fukaya ............................................................................................................ 795

Total Evaluation of in Bundle Void Fraction Measurement Test of PWR Fuel Assembly
Keiichi Hori, Yoshiei Akiyama, Keiji Miyazaki, Hiromasa Nishioka, and
Naoki Takeda .................................................................................................................. 801

Two-Phase Flow in the Upper Plenum of a PWR During ECC
M. Boddem and D. Mewes .............................................................................................. 813

Advanced Reactor Thermal Hydraulic Safety

Experimental Results for Long-Term, Large-Scale Natural Circulation in LWR-Containments
After Large and Small LOCAS
Lothar T. Wolf and Kyongtae K. Mun .............................................................................. 825

The First PANDA Tests
J. Dreier, M. Huggenberger, C. Aubert, T. Bandurski, O. Fischer, J. Healzer,
S. Lomperski, H.-J. Strassberger, G. Varadi, and George Yadigaroglu ......... 843

Experimental Investigation of Passive Residual Heat Removal System With Air Cooled
Heat Exchanger
Jong Hee Cha, Moon Ki Chung, and Hyung Gil Jun ....................................................... 1037

Study of a Transient Identification System Using a Neural Network for a PWR Plant
Yoshineo Ishihara, Masao Kasai, Masayuki Kambara, Hiromichi Mitsuda,
Toshikazu Kurata, and Hidekazu Shirosaki ................................................................. 1045

Thermal Hydraulics of Nuclear Safety and Reliability — II

Effects of Heat Exchanger Tube Parameters on Nucleate Pool Boiling Heat Transfer in
a Scaled IRWST
Moon-Hyun Chun and Myeong-Gie Kang ....................................................................... 853

A Study of Passive Safety Features by Utilizing Intra-Subassembly-Equipped Self-Actuated
Shutdown Mechanism for Future Large Fast Breeder Reactors
Nariaki Uto, H. Niwa, Y. Ieda, and K. Satoh .................................................................. 867

A Study on the Evaporative Heat Transfer Coefficient in PCCS
Y. M. Kang and Goon Cherl Park .................................................................................... 877

PRODIAG — A Hybrid Artificial Intelligence Based Reactor Diagnostic System
for Process Faults
J. Reifman, Tom Y. C. Wei, J. E. Vitela, C. A. Applequist, and
T. M. Chasensky ............................................................................................................ 885

Advances in Numerical Simulation of Steam Explosions — II

Vapor Explosion Phenomena: Scaling Considerations
Michael L. Corradini ........................................................................................................ 893

Study of Premixing Phase of Steam Explosion with JASMINE Code in ALPHA Program
Kiyofumi Moriymia, Norihiro Yamano, Yu Maruyama, Tamotsu Kudo, and
Jun Sugimoto .................................................................................................................... 903

Triggering Phenomena in Hemispherically Confined Molten Sn
Yoshiaki Takigahira, Yoshifumi Suzuki, Ken-ichiro Sugiyama, and
Mohammad Reza Nematollahi ......................................................................................... 917

Influence of Melt Freezing Characteristics on Steam Explosion Energetics
Timo Okkonen and Bal Raj Sehgal .................................................................................. 923

Spreading of Melts in Presence of Solidification
P. Ehrhard ......................................................................................................................... 935
Computational and Experimental Two-Phase Flow Developments — II/III

Turbine Flow Meter Response in Two-Phase Flows
W. Jaewoo Shim, Thomas J. Dougherty, and Huk Y. Cheh ........................................... 943

Nodalization Study for BETHSY Experiment
Stojan Petelin, Borut Mavko, Ivor Ravnikar, Peter Cebull, and
Yassin A. Hassan ................................................................. 955

Simulation of Condensation in the Presence of Noncondensible Gases Using the French
Thermal Hydraulic Code CATHARE
Joseph P. Reyes and Yassin A. Hassan ........................................... 963

The Effect of a Coating Material on Mist Cooling of Hot Metals
Yoshihiro Kikuchi, Koichi Tatsuta, and Mitsuo Sako ........................................... 971

Dynamic Subgrid Scale Model of Large Eddy Simulation of Cross Bundle Flows
Yassin A. Hassan, Hagop R. Barsamian, and G. Srikantiah ........................................... 979

Vibration Characteristics of Fuel Assemblies Subjected to a Boiling Water Two-Phase
Parallel Flow (Part 2)
Masanobu Futakuchi, Akehiko Hoshide, Hiroshi Miyano, Noboru Saito, Shunsuke Ogiya,
and Akira Inoue ................................................................. 985

Predictions of Stratification in Cold Leg Components Using Virtual Noding Schemes
Robert B. Piper, Yassin A. Hassan, S. S. Banerjee, Hagop R. Barsamian, and
Peter P. Cebull ................................................................. 991

Three-Dimensional Thermo-Fluidynamic Analysis of Gas Flow in Straight Piping With
Windflow Code
Yu Maruyama, Minoru Igarashi, Naohiko Nakamura, Akihide Hidaka,
Kazuichiro Hashimoto, Jun Sugimoto, and Kengo Nakajima ........................................... 997

Author Index ............................................................................ 1053
