Sponsored by: IEEE

In cooperation with: ICC

Official carrier: Singapore Telecom
SESSION 45

Communication Software Design Technologies

CHAIRPERSON: Ming-Yee Lai,
Bellcore,
USA

ORGANIZER: Ming-Yee Lai

SPONSOR: Communication Software

45.1 Object oriented generic models: a common way for designing network protocols, their management and the services they support
S Znaty, J-P Gaspoz, J-P Hubaux, Swiss Federal Institute of Technology, Switzerland

45.2 An object oriented approach to processing telecommunication transactions
A R Holcman, S Roy and J Neutrelle, QUALCOMM Inc., USA

45.3 Maintaining switching software viability
K F Rauscher and M-Y Lai, Bell Communications Research, USA; E L Sneed and R M Liss, AT&T Bell Labs, USA

45.4 A verification support for communication software design
K Yamano and Y Tokita, AIC System Labs, Japan; K Takahashi, Sendai National College of Technology, Japan

45.5 A framework for distributed internet service
H K Wang and J-L C Wu, National Taiwan Institute of Technology, Taiwan

45.6 Optimized compensation transaction for mobile telecommunication systems
Y Yoon, Electronics and Telecommunication Research Institute, Korea

45.7 Concurrency model and its applications to formal specifications of asynchronous protocols
M Kim, Korea Telecom Research Labs, Korea; S T Chanson, University of British Columbia, Canada; G Kim, Korea Telecom Research Labs, Korea

45.8 A timed-SDL for performance modeling of communication protocols
C Dou, National Yunlin Institute of Technology, Taiwan

SESSION 46

Speech Coding

CO-CHAIRPERSONS: Vladimir Cuperman,
Simon Fraser University, Canada
Toshio Miki,
NTT, DOCOMO, Japan

ORGANIZER: F. Marvasti

SPONSOR: Signal Processing and Communications Electronics

46.1 Performance of pitch synchronous multi-band (PSMB) speech coder with error-correction coding
H Yang, S-N Koh and V K Dubey, Nanyang Technological University, Singapore

46.2 Application of sorted codebook vector quantization to spectral coding of speech
H R S Mohammadi IUST University, Iran; W H Holmes, The University of New South Wales, Australia

46.3 On a waveform coding method using the nonuniform sampling for speech signals separated to high-low bandwidth
M Bae and S Bae, Soongsil University, Korea

46.4 Fixed bit-rate PWI speech coding with variable frame length
K W Tang and B M G Cheetham, University of Liverpool, UK

46.5 A vocoder based on speech recognition and synthesis
K Yi, J Cheng, A Wang, P Zhang, F Liu, W Li, B Yang, S Du and J Gong, Xidian University, P R China

46.6 Implementation of a low delay modified CELP coder at 4.8kb/s
J Zhang, H-S Wang and T-H Yu, The Chinese University of Hong Kong, Hong Kong

46.7 Improvement in the quality of speech received at suppressed carrier SSB
J Suzuki, Y Hara and T Shimamura, Saitama University, Japan
**SESSION 47**

**Satellite Communications**

**CHAIRPERSON:** Desmond Taylor, University of Canterbury, New Zealand

**ORGANIZER:** Shuzo Kato

**SPONSOR:** Satellite and Space Communications

47.1 **The role of satellites in the ATM era: a study of two possible network architectures**

*M H Hadjitheodosiou, University of Surrey, UK* ................................................................. 1619

47.2 **An efficient technique for dynamically allocating channels in satellite cellular networks**

*E Del Re, R Fantacci and G Giambene, Universita di Firenze, Italy* .................................... 1624

47.3 **On board regeneration of uplink signals affected by cross polarisation interference & multipath propagation using a blind adaptive multichannel estimator**

*M Martone, Watkins-Johnson Co., Italy* .......................................................... 1629

47.4 **Optimum digital modulation for nonlinear FDMA uplink and a regenerative satellite on-board processor**

*R M Majeed, Queen's University, Canada; W-G Chen, COM DEV Ltd., Canada; P J McLane, Queen's University Canada; K Lazaris-Brunner, COMDEV Ltd., Canada* .......................................................... 1634

47.5 **Interference localisation for the EUTELSAT satellite system**

*R Bardelli, EUTELSAT, France; D Haworth and N Smith, DRA, UK* .................................. 1641

47.6 **Adaptive satellite channel assignment scheme in high-speed ATM data communications**

*Y Sagawa and K Okada, NTT Wireless Systems Labs, Japan* ............................................. 1652

47.7 **Performance of multiple-symbol differential detection in a non-linear satellite channel**

*P Olsen and C Elia, European Space Research and Technology Center, The Netherlands* .............. 1657

47.8 **Joint on-board resource sharing and hierarchical modulation scheme for satellite communication**

*M Morimoto, M Okada and S Komaki, Osaka University, Japan* ........................................ 1662

**SESSION 48**

**Network Performance Analysis**

**CHAIRPERSON:** Saragur Srinidhi, NASA/Lewis Research Center, USA

**ORGANIZER:** Patrick Dowd

**SPONSOR:** Computer Communications

48.1 **Performance analysis of automatic call distributors with call waiting lamps**

*M Perry, Bell Northern Research, USA; A Nilsson, North Carolina State University, USA* .......... 1667

48.2 **Throughput analysis of ARQ selective-repeat protocol with time diversity in Markov channels**

*M Zorzi, Politecnico di Milano, Italy; R Rao, University of California at San Diego, USA* .......... 1673

48.3 **Capture effect in residential ethernet LAN**

*S Deng, GTE Labs Inc., USA* .......................................................... 1678

48.4 **Reachability analysis for communication service specifications described in global state transition rules**

*M Sato, ATR Communication Systems Research Labs, Japan* ............................................. 1683

48.5 **MASE-an integrated environment for modeling, analysis and engineering of computer/communications systems**

*A A Fredericks and W Jing, Monmouth University, USA* .................................................. 1688

48.6 **Statistical multiplexing and buffer sharing in multimedia high-speed networks: a frequency domain perspective**

*W-C Lau and S-Q Li, University of Texas at Austin, USA* ................................................ 1693

48.7 **Traffic modeling: Matching the power spectrum and distribution**

*L A Kulkarni and S-Q Li, University of Texas at Austin, USA* ............................................. 1701
SESSION 49

Switching Architecture I

CHAIRPERSON: George Dobrowski, Bellcore, USA

ORGANIZER: David Waechter

SPONSOR: Communication Switching

49.1 Multicast switch based on tandem expanded delta network
R Venkateswaran and C S Raghavendra, Washington State University, USA ......................................................... 1707

49.2 Real-time processing for virtual circuits in ATM switching
C Woodworth, S Paul and M J Karol, AT&T Bell Labs, USA .......................................................... 1712

49.3 ATM switching node system technology for effective maintainability
N Miyaho, A Itoh and K Koyama, NTT Network Service System Labs, Japan ........................................... 1719

49.4 Multi-era-bit/s switch based on burst transfer and independent shared buffers
M Beshai and E Munter, BNR, Canada .......................................................... 1724

49.5 A multiservice switch architecture for broadband packet networks
P Giacomazzi, and A Pattavina, Politecnico di Milano/CEFRIEL, Italy ..................................................... 1731

49.6 Torus-switch: scalable Tb/s ATM switch architecture based on the internal speed-up ATM switch
K Genda and N Yamanaka, NTT Network Service System Labs, Japan ....................................... 1738

49.7 Concentrators in ATM switching
S-Y R Li and C M Lau, The Chinese University of Hong Kong, Hong Kong ........................................ 1746

49.8 Distributed optical ATM switching architectures
R Bartos, R Kannan and K Y Lee, University of Denver, USA; H F Jordan, University of Colorado at Boulder, USA .......................................................... 1751

SESSION 50

Architecture and Operation of Optical Networks

CHAIRPERSON: Chinlon Lin, Bellcore, USA

ORGANIZER: Robert E. Tench

SPONSOR: Optical Communications, Transmission and Access Networks

50.1 Smartnet: An all-optical wavelength-division meshed-ring packet-switching network
I Rubin and H Hua, UCLA, USA ........................................................................................................... 1756

50.2 Experimental demonstration of a high-speed all-optical tunable-channel multi-access (TCMA) network
C-K Chan, L-K Chen and K-W Cheung, The Chinese University of Hong Kong, Hong Kong .................. 1761

50.3 Shufflenet=hypercube x ring and embedding shufflenet on mesh network
D Guo, Columbia University, USA; W Guo, GMI Software Inc., USA; A. S. Acampora, Columbia University, USA .......................................................... 1766

50.4 Channel sharing in multi-hop WDM lightwave networks(Do we really need more channels?)
S Tridandapani, IOWA State University, USA; B Mukherjee, University of California at Davis, USA .......... 1773

50.5 A multihop lightwave network based on star graphs
Z Hu, W Hsu and C Lau, Nanyang Technological University, Singapore ...................................................... 1779

50.6 A novel transmission coordination scheme for single hop lightwave networks
B Li, IBM, USA; A Ganz and C M Krishna, University of Massachusetts at Amherst, USA ................................ 1784
SESSION 51

CDMA I

CO-CHAIRPERSONS: Paul Lemson
AT&T Wireless Services, USA
Jhong Sam Lee,
J S Lee Associates Inc., USA

ORGANIZER: Paul Lemson, Mehmet Ulema

SPONSOR: Radio Communications, Data Communication System

51.1 Multi-rate detection for the IS-95 CDMA forward traffic channels
E Cohen and H-L Lou, AT&T Bell Labs, USA

51.2 A feasible architecture for high-speed synchronous CDMA distribution network using optical processing
J-G Zhang, Asian Institute Technology, Thailand; W C Kwong, Hofstra University, USA; L-K Chen and
K-W Cheung, The Chinese University of Hong Kong, Hong Kong

51.3 Efficient simulation of CDMA systems in wireless mobile communications
K B Letaief and M Hamdi, The Hong Kong University of Science and Technology, Hong Kong

51.4 Effective interference: A novel approach to interference modelling and traffic analysis in CDMA cellular networks
J Evans and D Everitt, University of Melbourne, Australia

51.5 Line rate(s) selection for cellular DS-CDMA systems with integrated traffic
M-H Fong, V K Bhargava and Q Wang, University of Victoria, Canada

51.6 The effect of time diversity on the forward link of the DS-CDMA cellular system
V Weerackody, AT&T Bell Labs, USA

51.7 The UK.LINK personal communications programme: coherent rake receiver architecture
for a DS-CDMA field trial system
T Busby, S C Swales, M A Beach and J P McGeehan, University of Bristol, U.K.

SESSION 52

Modulation and Coding III

CHAIRPERSON: Ender Ayanoglu,
AT&T Bell Labs, USA/Walter Ciesluk, Mitre Corporation, USA

ORGANIZER: Mehmet Ulema, Shuzo Kato

SPONSOR: Data Communication System, Satellite and Space Communications

52.1 New spectrum shaping codes and their trellises
B Honary, G Markarian and J Edgar, Lancaster University, UK

52.2 Geometrically uniform trellis codes for the Rayleigh-fading channel
R Van Nobelen and D P Taylor, University of Canterbury, New Zealand

52.3 An efficient 4-level coded-CPM modem for a wireless local area network coded QPTM
J Horikoshi, T Oku and K Kimura, Gunma University, Japan

52.4 Performance of pulse-position modulation with trellis-coded modulation on non-directed indoor
infrared channels
D C M Lee, M D Audeh and J M Kahn, University of California at Berkery, USA

52.5 Multicode high-speed transmission for wireless mobile communications
K B Letaief, J C-I Chuang and R D Murch, The Hong Kong University of Science and Technology, Hong Kong

SESSION 53

Telecommunications Management Network (TMN)

CHAIRPERSON: R Saracco,
CSELT, Italy

ORGANIZER: D N Zuckerman

SPONSOR: Network Operations Management

53.1 Preemptive detection of failure in telephone networks
B Silver, M Moghe, E Eichen, J Doleac, R Bhatnagar, Zhaogang Qian, H Wan and D Brooks, GTE Labs,
USA

XLI
53.2 Design and implementation of TDX-10 management system incorporating TMN concept
J T Park, Kyungbuk National University, Korea; S J Kim, Chungang University, Korea; Y M Kim and
Y H Cho, Korea Telecom Research Labs, Korea ................................................................. 1845

53.3 The TINA network resource model
M Lengdell, Telia Research, USA; H Oshigiri, NEC, Japan; J Pavon, Alcatel SESA Germany ................. 1850

53.4 Efficient UI interaction with TMN management
H Baldus and E Gegenmantel, Philips Research Labs, Germany ..................................................... 1857

53.5 A software architecture supporting CMIP management information bases of ATM switches
D Tian, Broadwork Technologies, USA ..................................................................................... 1862

53.6 Common software platform with reusable software environment for achieving the TMN concept
H Inamori, K Ueda, T Kishi and K Koyanagi, NTT Network Service Systems Labs, Japan .................... 1867

SESSION 54
Spread Spectrum II

CHAIRPERSON: Kwang-Cheng Chen,
National Tsing Hua University,
Taiwan

ORGANIZER: Iwao Sasase

SPONSOR: Communication Theory

54.1 Sensitivity analysis of linear DS-CDMA detectors to propagation delay estimation errors
S Parkvall, B Ottersten and E G Strom, Royal Institute of Technology, Sweden .......................... 1872

54.2 On the erlang capacity of CDMA cellular systems
J S Lee and L E Miller, J S Lee Associates Inc., USA ............................................................... 1877

54.3 A modified time-shared code tracking loop for frequency hopping systems
T Saba, Keio University, Japan; D-K Park, Mokwon University, Korea; S Mori, Keio University, Japan ......................................................................................................................... 1884

54.4 Parallel acquisition scheme with reference filtering for a DS/SSMA packet radio system
J Y Kim and J H Lee, Seoul National University, Korea ............................................................. 1889

54.5 A new digital correlator for bandlimited direct sequence spread spectrum signals
M Khairy, M Fikri and A Badawi, Cairo University, Egypt .......................................................... 1894

54.6 Precise detection of the on-board IF-switch timing for SS-TDMA systems
T Kawabata, Y Nagashima, Y Moritani and T Fujino, Mitsubishi Electric Corp., Japan .......................... 1899

SESSION 55
Multimedia Communications Over Broadband Networks

CHAIRPERSON: Ming-Ting Sun,
Bellcore,
USA

ORGANIZER: Alexander Gelman, F. Marvasti

SPONSOR: Multimedia Communications, Signal Processing and Communications Electronics

55.1 Accurate modeling of H.261 VBR video sources for packet transmission studies
C M Sharon, I E Lambadaris, M Devetsikiotis and A R Kaye, Carleton University, Canada .................. 1904

55.2 An efficient hierarchical VBR video coder over ATM networks
C Gao and J Meditch, University of Washington, USA .............................................................. 1910

55.3 ARQ schemes with switched antenna diversity and their applications in JPEG image transmission
V Weerackody and W Zeng, AT&T Bell Labs, USA ................................................................. 1915

55.4 A multi-level approach to the transport of MPEG-coded video over ATM and some experiments
S Singh, La Trobe University, Australia; S S Chan, Hewlett Packard Far East Pte Ltd., Singapore .................. 1920

55.5 Cell loss concealment method for MPEG video in ATM networks
J Feng, The University of New South Wales, Australia; K T Lo, The Hong Kong Polytechnic University, Hong Kong; H Mehrpour and A E Karbowiak, The University of New South Wales, Australia .................. 1925

55.6 A study of the host-network interface for MPEG based desktop video conferencing
P N Anirudhan, H S Chang and M J Izzard, Texas Instruments Inc., USA ....................................... 1930
SESSION 56

Communication Software Architecture & Tools

CHAIRPERSON: Masaichi Kajiwara,
OMRON,
Japan
ORGANIZER: Min-Yee Lai
SPONSOR: Communication Software

56.1 **Overview of INDT—a new tool for next generation network design**
B T Doshi, S Dravida and P Harshavardhana, AT&T Bell Labs, USA

56.2 **An open object-oriented simulation system for communications networks**
W Jing and A A Fredericks, Monmouth University, USA

56.3 **A software planning tool for a business oriented optical access network—PREST**
J R F Filho, Telebras, Brazil; H M F Tavares and R V Ribeiro, UNICAMP, Brazil

56.4 **File operation for a non-stop service enhanceable software (NOSES) platform**
H Sunaga, K Ueda, K Koyanagi, A Okamoto and H Inamori, NTT Network Service Systems Labs, Japan

56.5 **Service analysis and design with a graphical, domain-enhanced tool**
C Woolf, GTE Labs Inc., USA

56.6 **A generic software platform for local ATM networking**
H K Lalgudi, X Chen and V Kumar, AT&T Bell Labs, USA

56.7 **A software platform for service operation systems**
N Makinae, H Suzuki and K Suda, NTT Network Service Systems Labs, Japan

56.8 **Service operation and management architecture using surveillance of application software elements (SOMSE)**
H Tanaka and H Ishii, NTT Telecommunication Networks Labs, Japan

SESSION 57

Advanced Analog and Digital Lightwave Systems

CHAIRPERSON: Chien-Yu Kuo,
Harmonic Lightwaves,
USA
ORGANIZER: Robert E. Tench, Y. H. Chew
SPONSOR: Optical Communications, Transmission and Access Networks

57.1 **Modelling of stimulated brillouin scattering effects on optical fibre supported millimetre-wave systems**
S L Zhang and J J O'Reilly, University College London, UK

57.2 **Coherent fiber-optic microcellular radio communication system using RF-to-optic direct conversation scheme**
K Tsukamoto, Y Ishii, S Komaki and N Morinaga, Osaka University, Japan

57.3 **Signal restoration and BER performance of perturbed terrestrial cascaded EDFA systems**
J Song, C Fan, Z Yang, Y Yao and C Feng, Tsinghua University, P.R.China

57.4 **Subcarrier multiplexing based signaling and access control in optical FDM networks**
K-I Kitayama, Communication Research Labs, Japan

57.5 **Multiple polarization modulation (MPLM) system for coherent optical space communication**
T Kuri, K Tsukamoto and N Morinaga, Osaka University, Japan

57.6 **UWIN—a universal wireless infrared network system**
D B Medved, B Escojido and Y Azancot, JOLT Ltd., Israel
SESSION 58

Modulation & Coding for Fading Channels

CHAIRPERSON: Nicholas A Zervos, AT&T Bell Labs, USA
ORGANIZER: Iwao Sasase
SPONSOR: Communication Theory

58.1 A lower performance bound for phase estimation over slowly-fading Ricean channels
R Reggiannini, Universita di Pisa, Italy ................................................................. 2012

58.2 Influence of the phase relationship between direct path and interference path on XPIC performance
L Scarabosio, CSELT, Italy ......................................................................................... 2017

58.3 Bit error rate performance of antenna diversity systems with channel correlation
J R Abeysinghe and J A Roberts, The University of Kansas at Lawrence, USA .................................................. 2022

58.4 Performance of binary CPM schemes in frequency selective fading channels with pilot symbol assisted detection
J-H Kim, ChangWon National University, Korea; P K M Ho, Simon Fraser University, Canada; P A Goud, University of Alberta, Canada .......................................................... 2027

58.5 Impact of diversity on mobile systems with coded modulation, fading, and co-channel interference
J Ventura-Traveset, ESA/ESTEC, The Netherlands; G Cairea and E Biglieri, Politecnico di Torino, Italy ................................. 2033

58.6 Modified 8-state ungerboeck code for band-limited satellite fading channels
K-J Yong, V K Dubey and E Gunawan, Nanyang Technological University, Singapore .................................................................................. 2038

58.7 A reduced complexity channel estimator for linear modulations operating in fading dispersive channels
P Ho, G Deng and J Cavers, Simon Fraser University, Canada ........................................ 2043

SESSION 59

OFDM

CHAIRPERSON: Khaled Ben Letaief, Hong Kong University of Science and Technology, Hong Kong
ORGANIZER: Iwao Sasase
SPONSOR: Communication Theory

59.1 Terrestrial digital video broadcasting for mobile reception using OFDM
G L Stuber and M Russell, Georgia Institute of Technology, USA ..................................................... 2049

59.2 Synchronizability of OFDM signals
T Pollet and M Moeneclaey, University of Ghent, Belgium ......................................................... 2054

59.3 On the performance of different detection techniques for OFDM-CDMA in fading channels
S Kaiser, German Aerospace Research Establishment, Germany ................................................ 2059

59.4 COFDM for broadcasting satellites in elliptical orbits
A Franchi, Satellite Services Ltd, The Netherlands; E Colzi, C Elia and R A Harris, European Space Agency, The Netherlands ................................................................................. 2064

59.5 How to combat long echoes in OFDM transmission schemes: sub-channel equalization or more powerful channel coding
E Viterbo and K Fazel, German Aerospace Research Establishment, Germany ...................... 2069

SESSION 60

Switching Architecture II

CHAIRPERSON: Hiang-Meng Tan, Fujitsu (Singapore) Pte Ltd, Singapore
ORGANIZER: David Waechter
SPONSOR: Communication Switching

60.1 Fault-tolerant sorting network for ATM switching
N K Sharma, La Trobe University, Australia .............................................................................. 2075
60.2 The design of a distributor in a large ATM switch
P Harubin, BNR, USA; S Chowdhury, IBM, USA; B Sengupta, NEC USA Inc., USA

60.3 A high speed ATM switch with common parallel buffers
S H Kang KAIST, Korea; C Oh, ETRI, Korea; D. K. Sung, KAIST, Korea

60.4 High speed programmable ATM-HUB for HIPPI/STM-4 data network
T Fuji, T Fujii, N Kimura and S Ono, NTT Optical Network Systems Labs, Japan

60.5 RC-BB Switch: A high performance switching network for B-ISDN
H Chen, J Lambert and A Pitsillides, Swinburne University of Technology, Australia

60.6 A 2.5Gb/s MUX/DMUX implementation for ATM architectures
C Reillo, J C Diaz, J Reisco, L Merayo and P Lizcana, Telefonica I+D, Spain

60.7 Impact of the phase noise generated from semiconductor optical amplifiers on the size of optical space switches
J J O Pires, Instituto Superior Tecnico, Portugal

60.8 Optical cross-connect architecture using free-space optical switches based on PI-LOSS topology
S Kuroyanagi, K Hironishi and T Maeda, Fujitsu Labs Ltd, Japan

SESSION 61
Routing II
CHAIRPERSON: Mounir Hamdi,
Hong Kong University of Science and Technology,
Hong Kong
ORGANIZER: Patrick Dowd
SPONSOR: Computer Communications

61.1 A link based alternative routing scheme for network restoration under failure
R Dighe, Q Ren and B Sengupta, NEC USA, Inc., USA

61.2 Trade-offs in routing private multicast traffic
L Gong and N Shacham, SRI International, USA

61.3 Bandwidth-delay based routing algorithms
Z Wang and J Crowcroft, University College London, UK

61.4 Minimax end-to-end delay routing and capacity assignment for virtual circuit networks
K-T Cheng, University of California at Santa Barbara, USA; F Y-S Lin, National Taiwan Institute of Technology, Taiwan

61.5 Near-optimal routing for voice and data traffic in integrated broadband networks
I-H Lin and E Geraniotis, University of Maryland, USA

61.6 Virtual paths with dynamic step sizes in ATM networks
J-L C Wu, L-D Chou and S-J Tzeng, National Taiwan Institute of Technology, Taiwan

SESSION 62
CDMA II
CHAIRPERSON: Mehmet Ulema,
Bellcore,
USA
ORGANIZER: Paul Lemson
SPONSOR: Radio Communications, Data Communication System

62.1 New correlator receiver architecture for optical CDMA networks with an increased system capacity
F Khalegi and M Kavehrad, University of Ottawa, Canada

62.2 Direct-detection optical synchronous CDMA systems with double optical hard-limiters using modified prime sequence codes
T Ohtsuki, University of Tokyo, Japan; K Sato, I Sasase and S Mori, Keio University, Japan

62.3 Optical synchronous PPM/CDMA systems using co-channel interference cancellation
Y Gamachi, Keio University, Japan; T Ohtsuki, Science University of Tokyo, Japan; H Uehara and I Sasase, Keio University, Japan
62.4 A high efficient and interference resistant half-chip offset QPSK-CDMA scheme for wireless LAN systems
T Sagiyama, M Mizoguchi and S Kubota, NTT Wireless Systems Labs, Japan; S Kato, PCR Corporation, Japan

62.5 B-CDMA overlay forward link and reverse link capacity based on random traffic and a new CDMA
call blocking model
K Parsa and S Ghassemzadeh, InterDigital Telecom Inc., USA

62.6 Cascaded CCI cancellation and error-correcting codes for DS-SS CDMA mobile communication system
K M Shaheen, Bell Northern Research, USA; S C Gupta, Southern Methodist University, USA

SESSION 63
WDM Optical Networks
CHAIRPERSON : Kinichiro Ogawa,
AT&T Bell Labs,
USA
ORGANIZER : Robert E. Tench
SPONSOR : Optical Communications, Transmission and Access Networks

63.1 Electronic wavelength translation in optical networks
M Kovacevic and A Acampora, Columbia University, USA

63.2 Hierarchical design of WDM optical networks for ATM transport
S Jagannath, Columbia University, USA; K Bala and M Mihail, Bellcore, USA

63.3 Scalable multihop WDM passive ring with optimal wavelength assignment and adaptive wavelength
routing
D Guo, Columbia University, USA; W Guo, GMI Software Inc., USA; A S Acampora,
Columbia University, USA

63.4 MCDQDB (multi-channel DQDB) using WDM (wavelength division multiplexing)
W Cho, Kunsan National University, Korea; C Shim, M-L Song, J-Y Lee and S-B Lee, Yonsei University,
Korea

63.5 Synchronous reservation protocol for variable sized messages in WDM networks
J H Lee, Samsung Electronics Co.Ltd., Korea; C K Un, KAIST, Korea

63.6 A non-blocking architecture of wavelength division multiplexing photonic switching network
T Nagata, Waseda University, Japan; K Sezaki, University of Tokyo, Japan; Y Yasuda,
Waseda University, Japan

SESSION 64
Traffic Modelling
CHAIRPERSON : V Ramaswami,
Bellcore,
USA
ORGANIZER : David Waechter, Guy Omidyar
SPONSOR : Communication Switching, Communications Systems Integration and Modeling

64.1 On traffic peakedness and bandwidth relationship with application to wideband traffic engineering
M Tu, Bellcore, USA

64.2 Self-similar traffic parameter estimation: A semi-parametric periodogram-based algorithm
W-C Lau, UT Austin, USA; A Erramilli, J L Wang and W Willinger, Bellcore, USA

64.3 Pareto process as a model of self-similar packet traffic
J Gordon, Bellcore, USA

64.4 Traffic modeling and bandwidth allocation for MPEG video sources in ATM networks
J-L C Wu, National Taiwan Institute of Technology, Taiwan; Y-W Chen, DTG MOC, Taiwan; C-C Shiu,
National Taiwan Institute of Technology, Taiwan

64.5 An approach to estimating the traffic of a dynamic packet-switched network
Y Liu and P J Moylan, University of Newcastle, Australia
SESSION 65

Error Control/Channel Coding

CHAIRPERSON: Sabit Say, Bellcore, USA/Shuji Kubota, NTT, Japan
ORGANIZER: Mehmet Ulema, Shuzo Kato
SPONSOR: Data Communication System, Satellite and Space Communications

65.1 Generalised type II hybrid ARQ scheme using punctured convolutional coding for point-to-multipoint communication over interleaved Rayleigh fading AWGN channel
N Taspinar, Erciyes University, Turkey; A S Kesgin, Cumhuriyet University, Turkey

65.2 An accelerated search algorithm for punctured convolutional codes
Y Bian and John O’Reilly, University College London, UK

65.3 Recursive systematic convolutional codes and application to parallel concatenation
P Thitimajshima, King Mongkut’s Institute of Technology Ladkrabang, Thailand

65.4 Design guidelines of parallel concatenated convolutional codes
S Benedetto and G Montorsi, Politecnico di Torino, Italy

65.5 Adaptive ARQ/FEC for multitone transmission in wireless networks
E Ayanoglu, AT&T Bell Labs, USA

SESSION 66

Personal Communications Network Advances

CHAIRPERSON: D Hong, Sogang University, Korea
ORGANIZER: Paul Lemson
SPONSOR: Radio Communications, Personal Communications

66.1 Extending B-ISDN to support user terminal mobility over an ATM-based personal communications network
O T W Yu and V C M Leung, The University of British Columbia, Canada

66.2 BHME: A new capacity benchmark in PCS switching
M Vudali, UT-Dallas, USA; R Wank, Inteject Inc., USA; S Tekinay, BNR, USA

66.3 The link allocation problem on ATM-based personal communication networks
N-F Huang and R-C Wang, National Tsing Hua University, Taiwan; P-L Tzung, ITRI, Taiwan

66.4 Estimation of SS7 traffic in UMTS network
M Ostrowski, University of Adelaide, Australia

66.5 Reduction of call drop-outs during handoffs using efficient signal strength prediction algorithms for personal communications systems
G N Senarath and D Everitt, University of Melbourne, Australia

66.6 A new method of evaluating microcellular system capacity using deterministic propagation model
T X J Yan and A R Nix, University of Bristol, UK; H Hummuda, De Montford University, UK

Author’s Index Follows Page 2317
