Proceedings of the 1996 Conference on Information Science and Systems

Volume II

Department of Electrical Engineering
Princeton University
Princeton, New Jersey 08544-5263
Capacity and Coding Improvements of Certain Checkerboard Codes, William Weeks IV, Richard E. Blahut

Derivation of Burst Error Statistics for Finite State Channel Models Using a Combinatorial Approach, Cecilio Pimentel, Ian F. Blake

TA-3 Multiuser Detection
Chair: Behnaam Aazhang, Rice University

Onion Peeling for CDMA-Symmetric Rate Under RMS-Bandwidth Constraints, Tommy Guess, Mahesh K. Varanasi

Multi-Shot Multiuser Detector for Asynchronous CDMA Channel, Hongya Ge, Y. Bar-Ness

On the Quantized Input Decorrelating Detector, S. Bulumulla, S.S. Venkatesh

Performance Analysis of the One-Shot Decorrelating Detector for Direct-Sequence Spread-Spectrum Multiple-Access Communication Systems, Irfan Acar, Sawasd Tantaratana

Performance of a Multistage Multiuser Detector for a Frequency Hopping Multiple-access System, Karen W. Halford, Maite Brandt-Pearce

A New Receiving Technique for Frequency Hopping CDMA Systems with a Large Number of Users, Aleksandar V. Jovancevic, Edward L. Titlebaum

TA-4 Communication Theory III: Multipath/Interference
Chair: Richard J. Vaccaro, University of Rhode Island

Fast Computation of the FIR MMSE-DFE in the Presence of Co-Channel Interference, Naofal Al-Dhahir

Matched-Filter Receiver Structures for Time-Varying Multipath Channels, J.A. Sills, Southwest Research Institute, S. Roy

Receive Filters for Bandlimited Intersymbol Interference Channels, Krishna Balachandran, John B. Anderson

Volume II
pages 633-1249

A Deconvolution Method for Estimating Multipath Delay and Doppler, Amir Habboosh, Richard J. Vaccaro

Importance Sampling Simulation of Digital Transmission over Copper Loops, Andrew Sendonaris, Behnaam Aazhang

Techniques for Interference Cancellation in Multi-input, Multi-output FIR Channels, Young-Hoon Kim, Sanyogita Shamsunder

TA-5 Control I
Chair: Pablo A. Iglesias, Johns Hopkins University

Decomposition Solution of $H_{\infty}$ Filter Gain in Singularly Perturbed Systems, Xuemin Shen, Li Deng

Decentralized Optimal Control in Descriptor Systems, M.C.Y. Kuo, H.Y. Park
Stable Disturbance Accommodating Control of Large-Scale Systems Using Singular Perturbations with Application to Variable Speed Wind Turbines, Mark J. Balas, Yung Jae Lee
Connections Between Minimum Entropy Control and Linear Exponential Quadratic Gaussian Control: The Time-Varying Case, Marc A. Peters, Pablo A. Iglesias
A State Observer for Multivariable Adaptive Backstepping Design, Yi Ling, Gang Tao

TA-6 Flow Control in Telecommunication Networks
Chair: Hisashi Kobayashi, Princeton University

Constrained Optimization Methods for Admission Control and Offered Load in Communication Networks, Craig M. Barnhart, Jeffrey E. Wieselthier, Anthony Ephremides
Optimal Server Allocation to Parallel Queues with Randomly Modulated Service Rates; Dynamic Slot Allocation in Wireless Communication Networks, Nicholas Bambos, George Michailidis
On the Nonlinear Dynamics of Network Flow Control Algorithms, Predrag R. Jelenkovic, Aurel A. Lazar

Admission and Flow Control in Telecommunication Networks as a Hybrid Control Problem, Eitan Altman, Tamer Basar, Zigang Pan
When is Complete Sharing Optimal?, Shih-Tsung Yang, Anthony Ephremides
Finding Branching Points in a Multicasting Tree, Peifang Zhou, Oliver W.W. Yang

TA-7 Image and Video Processing
Chair: Chang W. Chen, University of Rochester

A New Motion-Compensated Image Interpolation Approach for HDTV, Kobad Bugwadia, Eric Petajan, Narindra N. Puri
Detection of Image Sources over a Gilbert-Elliott Channel, B.S. Srinivas, Eve A. Riskin, Murat Azizoglu, Richard Ladner
Predictive Bit Budget Allocation for Variable Bit Rate Transform Coders, Jinho Choi
On the Modeling of Subband Coefficients in Wavelet Image Coding with Clustering-based Adaptive Quantization, Jiebo Luo, Chang W. Chen, Kevin J. Parker

TA-8 Nonlinear and Geometric Methods in Control I
Co-chairs: Naomi Ehrich Leonard, Princeton University

Nonlinear Dynamical Modeling and Control Problems in the Actuation of Marine Vehicles, Invited, Louis L. Whitcomb, Dana R. Yoerger
Invariant Manifolds of Adaptive Nonlinear Systems, Invited, Miroslav Krstic, Zhong-Hua Li
Towards the Supervisory Control of Families of Nonlinear Regulators, Invited, Joao Hespanha, A.S. Morse
Open-loop Control of Dynamical Systems with Bifurcations, Invited, J. Baillieul ........................................... 769

Stability and Stabilization of Underwater Vehicle Dynamics, Invited, Naomi Ehrich Leonard ......................... 771

TA-9 Statistics and Neural Computation I
Chair: Tulay Adali, University of Maryland

Statistical Properties of Network Estimation and Computation, Andrew Barron ........................................... 776

Mean Field Theory for Sigmoid Belief Networks, Invited, Lawrence K. Saul, Tommi Jaakkola, Michael I. Jordan ......................................................................................................................... 777

A Generalized, Gaussian Mixture Classifier with Learning Based on Both Labelled and Unlabelled Data, Invited, David J. Miller, Serdar Uyar .......................................................... 783

A Statistical Model Complexity Framework for Topology Preserving Adaptive Vector Quantization, Invited, M. Kemal Sonmez, John S. Baras ................................................................. 788

Self-Consistency Tuning in Neural Network-Based NLPC Analysis, R. Rico-Martinez, J.S. Anderson, I.G. Kevrekidis ........................................................................................................................................ 790

Parameter Space Exploration in Neural Network Training via Ensemble Pruning, Sayandev Mukherjee, Terrence L. Fine ........................................................................................................ 795

FA-1 Detection and Estimation
Chair: Gonzalo R. Arce, University of Delaware

Joint Target Angle and Doppler Estimation in Interference Modeled as a Stable Process, Panagiotis Tsakalides, Raffaele Raspanti, Chrysostomos L. Nikias .......................................................... 797

Parameter Estimation for Non-Gaussian Autoregressive Processes, Edward R. Beadle, Petar Djuric ............. 803

Rapid Detection of Signals with Unknown Frequency Content Using Page's Test, Douglas A. Abraham, Robert J. Stahl ........................................................................................................ 809

Analysis of a Signal Starting Time Estimator Based on the Page Test Statistic, Douglas A. Abraham .......... 815

Matched Myriad Filtering for Robust Communications, Juan G. Gonzalez, David W. Griffith, Gonzalo R. Arce ....................................................................................................................... 821

FA-2 Modulation/Demodulation
Chair: Costas N. Georghiades, Texas A&M University

Digital FM Demodulation with Quadratic Phase Modeling and Rank Reduction Techniques, Donald W. Tufts, Hongya Ge ........................................................................................................ 827

Some Performance Results Relating to Bispectrum Modulation on Communication Channels, Richard J. Barton .................................................................................................................. 832

A Simple Blind Carrier Phase Acquisition Algorithm for QAM Constellations, Costas N. Georghiades ...... 839
FA-3 Estimation & Control of CDMA  
Chair: Leslie A. Rusch, Universite Laval

Signal Subspace Methods for Delay Estimation in Wireless CDMA Systems, R. Madyastha, J. Gotze, Behnam Aazhang ................................................................. 841

Single User CDMA Detection Using the Whitened Matched Filter, Laurence Mailaender, Ronald A. Itis ... 846

Parallel Interference Cancellation Based Delay Tracker for CDMA Receivers, Matti Latva-aho, Jorma Lilleberg ................................................................. 852

Noncoherent Parallel Acquisition of Spreading Sequences in DS/SS Systems, Meera Srinivasan, Dilip V. Sarwate ................................................................. 858

Approximate Analysis of the Noncoherent Matched Filter and Median Filter Code Acquisition Structure in an AWGN Channel, Jari Iinatti ................................................................. 864

Power Control for Multiuser Detection, Mahesh K. Varanasi ................................................................. 866

Convergence of Iterative Power Control Algorithms in CDMA Systems, Ching Yao Huang, Roy A. Yates .. 874

FA-4 Blind Equalization I  
Chair: Terrence L. Fine, Cornell University

Multichannel Blind Deconvolution when Input Signals have Discrete Alphabets, Ta-Hsin Li ................................................................. 885

On the Performance of CMA in the Presence of Noise, Hanks H. Zeng, Lang Tong ................................................................. 890

A Cross-Correlation Approach to Blind Equalization, H. Pozidis, A.P. Petropulu ................................................................. 895

Nonequiprobable Constellation Shaping and Blind Constant Modulus Algorithm Equalization, James P. LeBlanc, Steven W. McLaughlin ................................................................. 901

Blind Equalization using Feedward Neural Networks, Chiu Fai Wong, Terrence L. Fine ................................................................. 904

Intrinsic Properties of Local Minima for Unconstrained Blind Equalizers, Ye Li, K.J. Ray Liu, Zhi Ding ... 906

FA-5 Stochastic Optimization and Control  
Chair: Peter J. Ramadge, Princeton University

An Approach for Optimization of a Continuous Function with Many Local Minima, Boris Iglenik, Yoh-Han Pao, Steven R. Le Clair ................................................................. 912

A Deterministic Analysis of Simultaneous Perturbation Stochastic Approximation, I-Jeng Wang, Edwin K.P. Chong ................................................................. 918

Computationally Efficient Schemes for Partially Observable Markov Decision Processes with Error Bounds, Abraham Thomas, Steven I. Marcus ................................................................. 923

The Uniformity Principle: A New Tool for Probabilistic Robustness Analysis, B.R. Barmish, C.M. Lagoa ... 929

Risk-Sensitive Control of Markov Decision Processes, Stefano Coraluppi, Steven I. Marcus ................................................................. 934
Adaptive Critic Systems with Multiple-Term Memories, James Ting-Ho Lo ................................................................. 940

$H^\infty$ Robust Adaptive Control, Chujen Lin, William S. Levine .......................................................... 946

**FA-6 Communication Networks II**  
Chair: Svetislav V. Maric, University of Cambridge

Pricing and Power Control in Cellular Radio Systems, Hongbin Ji, Ching-Yao Huang ........................................ 952

Spatial Distribution of Traffic Density in ALOHA with Capture, Linda M. Zeger .................................. 958

Coded Tree Algorithms with Large Propagation Delay, Rumaih M.A. Al-Rumaih ........................................ 964

Memory Management Strategies for a Mobile User in a Broadcast Data Delivery System, Leandros Tassiulas,  
Chi-Jiun Su .................................................................................. 970

Channel Sharing for Cellular Networks, Wenzel G. Evans, Jr., Bernd-Peter Paris .................................. 975

**FA-7 Image Processing**  
Chairs: Sanjeev R. Kulkarni & Michael T. Orchard  
Princeton University

Time-Frequency Characterization of Fractal Textures, C.-Y. Wen, R. Acharya .................................................. 977

Classified Template Matching for Satellite Image Retrieval, Bo Tao, Bradley Dickinson .......................................................................................................................... 983

Image Enhancement Based on Wavelet Transform, Kyung Hoon Lee, Sung-Wan Park, Sung-Jea Ko, Aldo Morales ......................................................................................... 989

Multi-Robot Navigation in a Maze, Andres Lebaudy, Moshe Kam ................................................................. 995

An Information Theoretic Methodology for Noisy Image Classification with Application to Face Recognition, N. Warke, G.C. Orsak .................................................................................. 1001

LOIS: A Real-Time Lane Detection Algorithm, S. Lakshmanan, Karl C. Kluge ............................................... 1007

**FA-8 Nonlinear and Geometric Methods in Control II**  
Co-chairs: Naomi Ehrich Leonard, Princeton University, Eduardo D. Sontag, Rutgers University

Pseudolinearization and Exact Linearization Transformations in Nonlinear Optimal Control, Invited, Hualin Tan,  
Wilson J. Rugh .............................................................................. 1013

An Interpolation Method for Non-Smooth Simultaneous Stabilization of Nonlinear Systems, Invited, Bertina Ho-  
Mock-Qai, W.P. Dayawansa .................................................................. 1019

Feedback Stabilization of Nonholonomic Systems, Invited, Fernando Lizarralde, John Wen, Dan Popa .......................................................................................................................... 1025

Detectability of Nonlinear Systems, Invited, Eduardo D. Sontag, Yuan Wang .............................................. 1031

**FA-9 Statistics and Neural Computation II**  
Chair: Tulay Adali, University of Maryland

Statistical Aspects of Semiparametric Neural Networks, Invited, Enrico Capobianco ........................................ 1037

Information Geometry and Maximum Likelihood Criteria, Invited, Bill Byrne .............................................. 1043
Partial Likelihood for Signal Processing with Neural Networks and its Application to Channel Equalization, Invited, Tulay Adali, Xiao Liu, M. Kemal Sonmez

Recurrent Architectures for Object Recognition by Parameter Estimation of Hierarchical Mixtures, Invited, Vinay Kumar, Elias S. Manolakos

Image Quantification and the Minimum Conditional Bias/Variance Criterion, Invited, Yue Wang

FP-1 Distributed/Decentralized Detection
Chair: Rick S. Blum, Lehigh University

Distributed Signal Detection System Design Using Adaptive Signal Processing Techniques, Matthew C. Deans, Rick S. Blum

Fusion of Correlated Decisions by Reinforcement Learning, Jian-Guo Chen, N. Ansari

Distributed Detection of Dependent Data—the Two Sensor Problem, Peter F. Swaszek, Peter Willett, Rick S. Blum

Signal Detection in Multiple Sensor Systems with Fuzzy Information, V.N.S. Samarasooriya, Pramod K. Varshney

Quantization for Decentralized Detection over Noisy Channels with Interchannel Interference, Tolga M. Duman, Masoud Salehi

FP-2 Optical Networks
Chair: Paul R. Prucnal, Princeton University

Ring Network Reliability with Limits on Consecutively Bypassed Stations, Hung M. Dao, Charles B. Silio, Jr.

Algebraic Approach for the Allocation of Unequal-Spaced Channels in WDM Lightwave Systems, Wing C. Kwong, Guu-Chang Yang

Space-Division Optical Star Networks with Deflection Routing, Alberto Bononi

Design of Transparent Optical Multihop Shuffle Networks, Seung-Woo Seo, Andrew Myers, Chiangling Ng, H. Kobayashi, Paul R. Prucnal

Effects of Source Coherence and Dispersion on the Performance of Direct-Detection Fiber-Optic Communication Systems, K.V. Peddanarappagari, Maite Brandt-Pearce

FP-3 Analysis of CDMA Systems
Chair: Laurie Nelson, University of Minnesota

Approximations to and Chernoff Bounds on the Error Probabilities of Multicell CDMA over a Multipath Fading Channel with Power Control Error, Ning Kong, Laurence B. Milstein

On the Coding-Spreading Tradeoff in CDMA Systems, V. Veeravalli, Behnaam Aazhang

Dual Balanced Detection for Coherent Optical CDMA with Limited Phase Excursion, Fakher Ayadi, Leslie A. Rusch
Performance Analysis of Various Families of Ideal and Nearly Ideal Optical Orthogonal Codes, Svetislav V. Maric, Michael Chan .................................................. 1146

Wideband Signal Design Issues and Local Oscillator Drift, Mark D. Hahm, Edward L. Titlebaum ...... 1151

FP-4 Blind Equalization II
Chair: Georgios B. Giannakis, University of Virginia

Linear Multichannel Blind Equalizers of Nonlinear FIR Volterra Channels, Georgios B. Giannakis, Erchin Serpedin .......................................................... 1153

A Blind Channel Estimator Using the Constant Modulus Criterion with Subspace Constraints, Shiyu Zeng, Hanks H. Zeng, Lang Tong .................................. 1159

On Blind MIMO Channel Identification Using Second Order Statistics, Ye Li, K.J. Ray Liu ........ 1166

FP-6 Queuing
Chair: Bruce Hajek, University of Illinois

An Algebraic Topological Interpretation of Queueing Networks with Positive and Negative Customers, Eugene Foo, Thomas Robertazzi ........................................... 1178

Fitting Batch Markovian Arrival Processes, William Turin .................................................... 1184

Lower Bounds on the Rate-Delay Functions in Queues with Exponential and Constant Rate Servers, Damianos Karakos, Anthony Ephremides ..................................... 1190

On Variations of Queue Responses for Inputs with Identical Mean and Autocorrelation Functions, Bruce Hajek, Linhai He ................................................................. 1195

Generating Function for Normalizing Constants of Closed Multichain Queueing Networks of Product Type, Boris Igelnik, Alex Birman, Yakov Kogan ............................................ 1196

FP-7 Signal Processing and Numerical Algorithms
Chair: J. M. Morris, University of Maryland Baltimore County

Block Time-Recursive Gabor Transform and Its Implementation, C. Lu, S. Joshi, J. M. Morris .......... 1200

Different Roles of Toeplitz and Circulant Structures in Classical and Neuro-based Image Processing, N.K. Bose, W.P. Rumancik .................................................... 1202

Parallel Successive Over-Relaxation (SOR) Algorithms, Gerard G.L. Meyer, Mike Pascale .......... 1206

Efficient Monte Carlo Estimation of Partition Function Ratios of Markov Random Fields, G. Potamianos ... 1212

A Fast Givens QR Algorithm for Efficient Cache Utilization, James J. Carrig, Jr., Gerard G.L. Meyer .. 1216

A Novel Algorithm for the Computation of the Frequency Response of Systems, John E. Diamessis, Nicolas I. Androulis, Apostolos V. Papathanassiou .................................... 1222
Equivalence Between Center Manifold Theory and Normal Form Theory, Invited, Carla A. Schwartz, Aiguo Yan .......................................................... 1226

On the Choice of Coordinates for Control Problems on SO(3), Invited, Panagiotis Tsiotras .................... 1238

Controllability and Observability Functions for Model Reduction of Nonlinear Systems, Invited, W. Steven Gray, Joseph Mesko .................................................. 1244
