# CONTENTS

## VOLUME 1

### REGULATIONS, CODES, AND STANDARDS

#### Performance Compliance
- **Noise Control Performance Guidelines for Compressor Station Design**
  - Leslie D. Frank, Nigel B. Maybee, and Neal Matthews ........................................ 1
- **PETRONAS Gas BHD Experiences in Accreditation of ISO 9002 Quality Assurance Standard for Its Pipeline Operations Division in Malaysia**
  - Muhamed Ali Hashim Mohamed and Ismail Abdul Rahman ........................................ 9
- **The Investigation of Pipeline Accidents: Canada's Approach**
  - William T. Tucker ........................................................................................................ 17

#### Regulatory Issues
- **Managing Environmental Noise Associated With Pipeline Facilities in Canada**
  - David C. DeGagne ........................................................................................................ 21
- **Effectiveness of U.S. and International Pipeline Regulations With Regard to Land Use Planning**
  - Robert Dresnack, Eugene Golub, Joshua Greenfeld, F. H. (Bud) Griffis, and Louis J. Pignataro ........................................... 25
- **Pipeline Abandonment: A Discussion of Technical and Environmental Issues by Pipeline Abandonment Technical and Environmental Working Groups**
  - Karen Leah Etherington .................................................................................................. 31

### CURRENT ISSUES

#### Competitive Environment
- **Benchmarking for Competitive Advantage**
  - David Korpach and Mark Hutchison ........................................................................... 49
- **Pipelining in a Changing Competitive Environment**
  - E. Glynn Jones and Donald M. Wishart ....................................................................... 55
- **The North Peruvian Oil Pipeline and Its Future**
  - Jorge A. Toledo Ocampo ............................................................................................... 63

#### Communications and Operations
- **A Cost-Effective Method of Achieving Meaningful Citizen Participation in Public Roadway Pipeline Studies**
  - Mario E. Buszynski ....................................................................................................... 73
- **Optimal Hub Location in Pipeline Networks**
  - Dawn R. Dott, S. C. Wirasinghe, and Amit Chakma ................................................... 79
- **Unleashing the Hidden Value of a Pipeline Through the Use of Visual Communications**
  - Paul B. Connor ............................................................................................................. 85
- **Pipeline Hydrocarbon Transportation: Some Operating Concerns and R&D Trends**
  - M. L. Fernandez, E. E. Tapanes, and P. V. Zelitskaya ................................................... 95

#### Risk Assessment and Management
- **Control of Internal Pipeline Corrosion Based Upon an Evaluation of Risk: A Case for Change**
  - David J. Richardson ........................................................................................................ 103
- **Target Reliability Levels for Pipeline Limit States Design**
  - T. J. E. Zimmerman, Q. Chen, and M. D. Pandy .......................................................... 111
- **Pipeline Maintenance Planning Based on Quantitative Risk Analysis**
  - M. J. Stephens and M. A. Nessim .................................................................................. 121
- **Quality and Risk Management: Complementary Management Techniques to Assist Pipeline Life Cycle Integrity**
  - Bruce E. Fowlie ............................................................................................................. 133
Risk Communication, A Component of an Integrated Risk Management Process for Pipeline Operators
David C. DeGagne

A New Approach to Pipeline Risk Assessment and Integrity Management
Wayne H. Feil and Graeme G. King

Public Safety Risk Assessment of Natural Gas Liquids Pipelines
Michael J. Zelensky and W. Arthur J. Springer

MATERIALS

Sour Service and External Corrosion
Arctic Linepipe With High Resistance to Crack Propagation and HIC
Gregorio R. Murtagian, Guillermo L. Fitzsimons, Juan C. González, Irina S. Kotova, and Nikoli I. Anenkov

Quantitative Examination of Segregation in Slabs for the Production of Sour Service Linepipe
Bernhard Hoh

Mechanical Properties of Line Pipe
Dynamic Ductile Tearing in High Strength Pipeline Steels
F. Rivalin, T. Lung, M. Di Fant, and A. Pineau

Determination of the Crack-Arrest Toughness of the Pipeline Steel X 70
S. Felber

Manufacture, Properties, and Installation of X80 (550 MPa) Gas Transmission Linepipe
M. Milos Kostic

Comparison of Ring Expansion vs Flat Tensile Testing for Determining Linepipe Yield Strength
Wahib E. Saikaly, William D. Bailey, and Laurie E. Collins

A Simple Procedure for Synthesizing Charpy Impact Energy Transition Curves From Limited Test Data
Michael J. Rosenfeld

External and Internal Coating Systems
Tar-Polyurethane Joint Coating for the Three-Layer Polyethylene Pipeline Coating
Robert H. Rogers

External Pipeline Coating Selection for New and Existing Buried Pipelines
Mick D. Brown

Material Technology Trends to Improve Multi-Layer Coatings: Challenges to Traditional Thinking
Jamie W. Cox, Denis Grimshaw, and Carmine D’Agostino

High Temperature Pipeline Coatings Using Polypropylene Over Fusion Bonded Epoxy
Richard Norsworthy

The Use of Thermoplastic Lined Pipelines for Aggressive Hydrocarbon Service
Kenneth A. Woodward and Tariq Al-Hassan

CORROSION AND INTEGRITY

Research and Testing
Effect of Asphaltene Deposition on the Internal Corrosion in Transmission Lines
José L. Morales, Alfredo Viloria, and Carlos A. Palacios T

Limit Loads for Pipelines With Axial Surface Flaws
G. Shen and W. R. Tyson

Integrity Management
Practical Diagnostics of Russian Gas Transmission Pipelines
V. V. Kharionovsky

Predictive and Preventive Maintenance of Oil and Gas Production Pipelines in the Area North Monagas-Venezuela
Miguel Angel Lugo Pérez
Validating the Serviceability of IPL's Line 13  
John Kiefner, Willard Maxey, John Smith, and Robert Lazor .......................... 307

Pipeline Accident Statistics: Base to Pipeline Rehabilitation  
Timur Chis ........................................................................... 319

Inspection  
R&D Advances in Corrosion and Crack Monitoring for Oil and Gas Lines  
D. L. Atherton, W. Czura, T. W. Krause, P. Laursen, B. Mergelas, and C. Hauge ........................................................................... 329

Measuring Pipeline Movement in Geotechnically Unstable Areas Using an Inertial Geometry Pipeline Inspection Pig  
Jaroslaw A. Czyz, Constantino Fracaroli, and Alan P. Sergeant .................................. 337

Internal Inspection Device for Detection of Longitudinal Cracks in Oil and Gas Pipelines: Results From an Operational Experience  
H. H. Willems, O. A. Barbian, and N. I. Uzelac .......................................................... 345

Inspection Challenges: Pigs versus Pipes  
E. M. Holden and Keith Grimes ........................................................................ 353

Colonial's Experience With Finding Longitudinal Defects With Internal Inspection Devices  
Dennis C. Johnston and Stephen S. Thomas ............................................................. 369

Defect and Repair Assessment  
Residual Strength of 48-Inch Diameter Corroded Pipe Determined by Full Scale Combined Loading Experiments  
Stephen C. Grigory and Marina Q. Smith .................................................................. 377

New Procedures for the Residual Strength Assessment of Corroded Pipe Subjected to Combined Loads  
Marina Q. Smith and Stephen C. Grigory .................................................................. 387

Assessment of Long Corrosion Grooves in Line Pipe  
Duane S. Cronin, K. Andrew Roberts, and Roy J. Pick ............................................. 401

Pipeline Failure Investigations: Analytical Techniques and Case Studies  
Brian R. Wilson ............................................................................. 409

Life After Inspection  
Keith Grimes and David G. Jones ........................................................................ 417

The Evaluation and Restoration of a Deteriorated Buried Gas Pipeline  
Ricardo Dovico and Eduardo Montero ......................................................................... 435

Maintenance and Repair  
AC Corrosion: A New Threat to Pipeline Integrity?  
Robert A. Gummow, Robert G. Wakelin, and Sorin M. Segall .................................... 443

Evaluation of Stray Current Effect on the Cathodic Protection of Underground Pipeline  

Coating Integrity Survey Using DC Voltage Gradient Technique at Korea Gas Corporation  

Corrosion and Cathodic Protection at Disbonded Coatings  

Stress Corrosion Cracking  
Stress and Strain State of a Gas Pipeline in Conditions of Stress-Corrosion  
V. V. Kharionovsky and V. P. Tcherni ................................................................. 479

Pipeline SCC in Near-Neutral pH Environment: Recent Progress  
Stress Corrosion Cracking of a Liquid Transmission Line
Ravi M. Krishnamurthy, Reg W. MacDonald, and
Peter M. Marreck

Factors Influencing Stress Corrosion Cracking of Gas Transmission Pipelines:
Detailed Studies Following a Pipeline Failure:
Part 1, Environmental Considerations
Martyn J. Wilmott and David A. Diakow

Hydrogen-Induced Stress Corrosion Cracking of Pipe Lines of Russia
Tatyana K. Sergeyeva and Igor A. Tychkin

Investigation of the Passivity, Hydrogen Embrittlement and Threshold Stress
of Duplex Stainless Steel
Mirko Gojic, Mirjana Metikos-Hukovic, and Ranko Babic

Study of Stress-Corrosion Cracks: Physical and Mechanical Properties of
Steel After Hydrostatic Re-Testing
S. Karpov, M. Korolyov, and Tatyana K. Sergeyeva

Mechanisms of High-pH and Near-Neutral-pH SCC of Underground Pipelines
John A. Beavers and Brent A. Harle

Stress Corrosion Crack Growth of Pipeline Steels in NS4 Solution
A. Plumtree and S. B. Lambert

Factors Influencing Stress Corrosion Cracking of Gas Transmission Pipelines:
Detailed Studies Following a Pipeline Failure:
Part 2, Pipe Metallurgy and Mechanical Testing
Martyn J. Wilmott and David A. Diakow
