DSP1 Efficient Filters

Improved Design of Long FIR Filters Using the Frequency Masking Technique ........................................ III-1272
M. Bellanger - CNAM, France

Optimal Least-Squares Design of Pipelined Recursive Filters in the Time-Domain .................................... III-1276
S. Pokala, M. Imtiaz, A. Shaw - Wright State University, USA

Hardware Efficient FIR Filter Structures from Linear Program Design Constraints .................................. III-1280
K. Sienski, M. Legako - E-Systems, USA

GA-Based Design of Multiplierless 2-D State-Space Digital Filters with Very Small Roundoff Noise ........ III-1283
Y. Lee, M. Kawamata, T. Higuchi - Tohoku University, Japan

Design of Efficient FIR Filters with Cyclotomic Polynomial Using Mixed Integer Linear Programming .... III-1287
W. Oh, Y. Lee - Korea Advanced Institute of Science and Technology, Korea

Convolution Using the Undecimated Discrete Wavelet Transform ..................................................... III-1291
H. Guo, C. Burrus - Rice University, USA

DSP Implementation and Performance Evaluation of Sparse-Tap Adaptive FIR Filters with Tap-Position Control ... III-1295
A. Hirano, A. Sugiyama, S. Ikeda - NEC Corporation, Japan

A Fast Transversal Filter for the Numerical Factorization of Polynomials ............................................. III-1299
A. Hasan - College of Electronic Engineering, Libya
M. Hasan - Colorado State University, USA

Analysis of Subband Adaptive Filters ..................................................................................................... III-1303
H. Sakai, N. Hirose - Kyoto University, Japan

A Parallel Structure Based on Sub-band Decomposition ............................................................................. III-1307
U. Iyer, M. Nayeri - Michigan State University, USA

DSP2 Fast Algorithms

Real-Valued Fast Discrete Fourier Transform and Cyclic Convolution Algorithms of Highly Composite Even Length ... III-1311
H. Murakami - Kanazawa Institute of Technology, Japan

DFT Computation Using Shift and Addition Operations ............................................................................. III-1315
N. Bhatnagar - USA

Pipeline Processor for Fast Architecture Oriented Regular DCT-IDCT Algorithm .................................. III-1319
D. Akopian, J. Astola - Tampere University of Technology, Finland

An FFT for the 2-sphere and Applications .................................................................................................. III-1323
D. Healy, D. Rockmore - Dartmouth College, USA
S. Moore - BBN Systems and Technologies, USA

Fast Algorithm for 2-D Image Moments via the Radon Transform .......................................................... III-1327
T. Shen, D. Lin, W. Siu - The Hong Kong Polytechnic University, Hong Kong

A New Algorithm for Computing Sparse Solutions to Linear Inverse Problems .................................. III-1331
G. Horikumar, Y. Bresler - University of Illinois at Urbana-Champaign, USA

A Levinson-Like Fast Algorithm for Solving Block-Slanted-Toeplitz Systems of Equations Arising in Wavelet-Based Solution of Integral Equations .................................................. III-1335
R. Joshi, A. Yagle - University of Michigan, USA

A Fast M-D Chandrasekhar Algorithm for Second Order Volterra Adaptive Filtering ...................... III-1339
M. Sayadi, A. Chaari, F. Fnaiech, M. Najim - ESSTT, Tunisia

A Fast Wavelet Transform-Domain LMS Algorithm .................................................................................. III-1343
S. Attallah, M. Najim - ENSEIRB, France

A Polynomial-Transform Based Computation of the 2-D DCT with Minimum Multiplicative Complexity ...... III-1347
J. Prado, P. Duhamel - Telecom Paris, France
DSP3  Design and Implementation of Digital Filters

The Digital Prolate Spheroidal Window .......................................................... III-1351
T. Verma, S. Bilbao, T. Meng - Stanford University, USA

A Well-Conditioned Quadratic Program for Unique Design of Two-Dimensional Weighted Chebyshev FIR Filters .......... III-1355
S. Nordebo, I. Claesson - University College of Karlskrona/Ronneby, Sweden

Efficient Design of Families of FIR Filters by Transformation ................................ III-1359
L. Karam - Arizona State University, USA
J. McClellan - Georgia Institute of Technology, USA

Applications of Discrete-Time Laguerre Networks to Envelope Constrained Filter Design .................................. III-1363
Z. Zang, B. Vo, A. Cantoni, K. Teo - Australian Telecom. Research Institute, Australia

Generalized Digital Butterworth Filter Design .............................................. III-1367
I. Selesnick, C. Burrus - Rice University, USA

Roundoff Noise Minimization in a Direct Form Delta Operator Structure .................................................. III-1371
J. Kauariemi - Helsinki University of Technology, Finland
T. Laakso - University of Westminster, UK
I. Hartimo, S. Ovaska - Helsinki University of Technology, Finland

Improved Power-of-Two Sharpening Filter Design by Genetic Algorithm .................................. III-1375
P. Gentili, F. Piazza, A. Uncini - University of Ancona, Italy

Design of Stable IIR Filters in the Complex Domain by Automatic Delay Selection ................................ III-1379
R. Vierincks, Y. Rolain - Vrije Universiteit Brussel, Belgium
J. Schoukens, R. Pintelon - Vrije Universiteit Brussel, Belgium

Decolored LI Filter Lattice: A Subclass of LI Filters Useful in Practice .................................. III-1383
Y. Kim - Samsung Electronics Company, Korea

High-Order Error Feedback for Noise Reduction in State-Space Digital Filters ................................ III-1387
T. Hinamoto, S. Karino - Hiroshima University, Japan

DSP4  Time/Frequency and Time/Scale Analysis

Oversampled FIR And IIR DFT Filter Banks And Weyl-Heisenberg Frames ........................................ III-1391
H. Bolcskei, F. Hlawatsch - Vienna University of Technology, Austria
H. Feichtinger - University of Vienna, AUSTRIA

Wigner-Type a-b and Time-Frequency Analysis Based on Conjugate Operators ................................ III-1395
F. Hlawatsch - Vienna University of Technology, Austria
T. Twaroch, H. Bolcskei - Vienna University of Technology, AUSTRIA

Local Polynomial Periodograms for Signals with the Time-Varying Frequency and Amplitude ................ III-1399
V. Katkovnik - University of South Africa, RSA

Evolutionary Spectral Analysis Using a Warped Gabor Expansion .................................. III-1403
A. Akan, L. Chaparro - University of Pittsburgh, USA

Discrete Powers-of-Two Kernels for Time-Frequency Distributions ..................................... III-1407
G. Venkatesan, M. Amin - Villanova University, USA

Time-Frequency Strip Filters ................................................................. III-1411
B. Weisburn - Cornell University, USA
R. Shenoy - Schlumberger Doll Research, USA

Interactive Wavelet Processing and Techniques Applied to Digital Mammography ........................ III-1415
I. Koren, A. Laine, F. Taylor, M. Lewis - University of Florida, USA

Optimal Phase Kernels for Time-Frequency Analysis ........................................ III-1419
L. Olsen, R. Baraniuk - Rice University, USA

The Pseudo-Bertrand Distribution and Alternative Affine Class Generators ................................ III-1423
P. Goncalves, R. Baraniuk - Rice University, USA

What are the Joint Time-Frequency Moments of a Signal? ........................................ III-1427
B. Tancer, P. Loughlin - University of Pittsburgh, USA
Volume III

DSP5 Applications of Time/Frequency Representation

Generalized Joint Signal Representations and Optimum Detection .................................................. III-1431
A. Sayeed, D. Jones - University of Illinois, USA

Analysis of Errors in Quantization of Weyl-Heisenberg Frame Expansions and Oversampled A/D Conversion .................................................. III-1435
Z. Cvetkovic - University of California at Berkeley, USA

Time-Varying Characteristics of Postural Sway Are Different for Patients and Healthy Controls .................. III-1439
P. Loughlin, M. Redfern, B. Tacer - University of Pittsburgh, USA

Wavelet-Based Multi-Carrier CDMA for Personal Communications Systems ..................................... III-1443
K. Chang, X. Lin, H. Li - Electronics and Telecommunications Research Institute, ROK

Optimized Wavelets for Fingerprint Compression ........................................................................ III-1447
B. Sherlock, D. Monro - University of Bath, UK

Sur'Twave: An Object-Oriented Class Library for Wavelet Analysis ............................................... III-1451
J. Adler - Tangent Systems, USA
B. Rao - University of California at San Diego, USA

Techniques for Fast Implementation of the Embedded Zerotree Wavelet (EZW) Algorithm .................. III-1455
J. Shapiro - Aware, Inc., USA

Fast Computation of the Continuous Wavelet Transform Through Oblique Projections ................ III-1459
M. Vrhel, C. Lee, M. Unser - National Institute of Health, USA

Design of Maximally Smooth Wavelets .................................................................................. III-1463
M. Lang - University of Bremen, Germany
P. Heller - One Oak Park, USA

Towards a New Measure of Smoothness for the Design of Wavelet Basis ................................ III-1467
J. Odegard, C. Burrus - Rice University, USA

DSP6 Wavelets and Filter Banks

Biorthogonal Cosine-Modulated Filter Bank .................................................................................. III-1471
T. Nguyen - University of Wisconsin, USA
P. Heller - Aware Inc., USA

A Distortion Analysis and Optimal Design of Orthogonal Basis for DMT Transceivers ................ III-1475
X. Lin, A. Akansu - New Jersey Institute of Technology, USA

Processing Arbitrary-Length Signals with MDFT Filter Banks .................................................. III-1479
T. Karp - Hamburg University of Technology, Germany
J. Kliewer - University Kiel, Germany
A. Mertins, N. Fliege - Hamburg University of Technology, Germany

Cosine-Modulated 2-Dimensional Perfect Reconstruction FIR Filter Banks with Linear Phase .......... III-1483
T. Nagai, M. Ikehara - Keio University, Japan

Theory of Optimal Orthonormal Filter Banks ........................................................................ III-1487
P. Vaidyanathan - California Institute of Technology, USA

Filter Bank Design for Minimum Distortion in Presence of Subband Quantization .................. III-1491
K. Gasse, F. Moreau de St-Martin, P. Duhamel - ENST, France

Signal-Based Design of Wavelet Filters .................................................................................. III-1495
F. Moreau de St-Martin, E. Gautier - CCETT, France
J. d'Ales de Corbet - Universite Paris-Dauphine, France

Two-Dimensional Orthogonal and Symmetrical Wavelets and Filter-Banks .............................. III-1499
D. Stanhill, Y. Zeeli - Technion, Israel

Statistical Behavior of Wavelet Transmultiplexers in Arbitrary Synchronization States .......... III-1503
M. Lyall, E. Orr - Atlantic Aerospace Electronics Corporation, USA

Wavelets in Polar Coordinates .................................................................................................. III-1507
O. Andrea, C. Johnston, N. Erdol - Florida Atlantic University, USA
DSP7 Multirate Systems and Filter Banks

Non-Uniform Filter Banks Based on a Multi-Prototype Cosine Modulation
F. Argenti, E. Del Re - University of Florence, Italy

Parameterization and Implementation of Orthogonal Wavelet Transforms
P. Rieder, K. Gerganoff - Technical University Munich, Germany
J. Gotze - Rice University Houston, USA
J. Nossek - Technical University Munich, Germany

Design of Signal-Adapted FIR Paraunitary Filter Banks
P. Moulin, M. Anitescu, K. Kortanek, F. Potra - Bell Communications Research, USA

A Nonlinear Subband Decomposition with Perfect Reconstruction
F. Hampson, J. Pesquet - Univ. Paris, France

Optimal Design of Transmitter and Receiver Filters with Mixed Performance Objectives
W. Campbell, T. Parks - Cornell University, USA

Oversampled FIR Filter Banks and Frames in L-squared (Z)
M. Vetterli, Z. Cvetkovic - University of California at Berkeley, USA

Multistage Multirate Adaptive Filters
G. Williamson - Illinois Institute of Technology, USA
S. Dasgupta - University of Iowa, USA
M. Fu - The University of Newcastle, USA

2D Factorizable FIR Principal Component Filter Banks
B. Xuan, R. Bamberger - Washington State University, USA

Reconstruction-Optimized Lapped Orthogonal Transforms
S. Hemam - Cornell University, USA

A New Two-Dimensional Nonseparable Modulated Filter Banks
S. Chan - The University of Hong Kong, Hong Kong

DSP8 Multirate Systems and Wavelets

Discrete Coefficients Filter Banks and Applications in Image Coding
C. Kok, T. Nguyen - University of Wisconsin, USA

A Polyphase Approach to Time-Varying Filter Banks
S. Phoong, P. Vaidyanathan - California Institute of Technology, USA

A Low Probability of Intercept Signal Detection Receiver Using Quadrature Mirror Filter Bank Trees
T. Farrell, G. Prescott - University of Kansas, USA

Adaptive Spectrum Exchange and Modification Using Multirate Filters
S. Wada - Tokyo Denki University, Japan

Design of 2-Dimensional Linear Phase Perfect Reconstruction FIR Filter Banks Using Lagrange Multiplier Method
M. Ikehara, K. Inose - Keio University, Japan

A Pyramidal Coder Using A Non-Linear Filter Bank
R. Queiroz - Xerox Corporation, USA
D. Florencio - Georgia Institute of Technology, USA

Determination of a Canonical Lattice Structure for Odd Length Linear-Phase PR Filter Banks
D. Pinchon - Universite P. Sabatier, France
P. Siohan - CCETT (France Telecom), France

Why and How Prefiltering for Discrete Multiwavelet Transforms
X. Xia - Hughes Research Labs, USA
J. Geronimo - Georgia Institute of Technology, USA
D. Hardin - Vanderbilt University, USA
B. Suter - Air Force of Technology, USA

Adaptive Sampling Using the Discrete Wavelet Transform with Application to Surface Digitization in Automated Manufacturing
C. Huang, A. Sobharwal, Y. Zheng, L. Potter - The Ohio State University, USA

Modulated Filter Banks and Wavelets - A General Unified Theory
R. Gopinath - IBM Watson Research, USA
DSP9  Nonlinear Filters and Systems

Parallel-Cascade Realizations and Approximations of Truncated Volterra Systems ........................................III-1589
  T. Panicker, V. Mathews - University of Utah, USA

Piecewise Volterra Filters Based on the Threshold Decomposition Operator .....................................................III-1593
  E. Heredia, G. Arce - University of Delaware, USA

Theory and Applications of Adaptive Second Order IIR Volterra Filters .......................................................III-1597
  E. Roy, R. Stewart, T. Durrani - University of Strathclyde, UK

Two Dimensional Blind Volterra Signal Modeling ..................................................................................III-1601
  T. Stathaki - Imperial College of London, UK

Channel Equalization for Self-Synchronizing Chaotic Systems .............................................................III-1605
  K. Cuomo, A. Oppenheim, R. Barron - Massachusetts Institute of Technology, USA

TLS Parameter Estimation for Filtering Chaotic Time Series ..........................................................III-1609
  S. Schweizer, V. Stonick, J. Evans - Carnegie Mellon University, USA

An Improved Quantitative Measure of Image Restoration Quality .........................................................III-1613
  S. Choy, Y. Chan, W. Siu - Hong Kong Polytechnic University, Hong Kong

A Class of Stochastic Resonance Systems for Signal Processing Applications ........................................III-1617
  H. Papadopoulos, G. Wornell - Massachusetts Institute of Technology, USA

Jacobi's Method for Massive Parallel Wave Digital Filter Algorithm .......................................................III-1621
  T. Felderhoff - University of Paderborn(formerly), Germany

Detection and Estimation of Soliton Signals ..................................................................................III-1625
  A. Singer - Massachusetts Institute of Technology, USA

DSP10  Adaptive Filtering

A Novel Adaptive IIR Filter Architecture for Active Noise Control .....................................................III-1629
  D. Crawford, R. Stewart - University of Strathclyde, UK
  E. Toma - Motorola, Ltd, UK

An Effective Approach to Adaptive IIR Filtering ..................................................................................III-1633
  M. Harteneck, R. Stewart - University of Strathclyde, UK
  J. McWhirter, I. Proudler - Defence Research Agency, UK

Canonical Time Series and Canonical Correlation for Filtering ..........................................................III-1637
  J. Thomas, L. Scharf - University of Colorado at Boulder, USA

A New Interpretation of the Misadjustment in Adaptive Filtering ........................................................III-1641
  H. Butterweck - Eindhoven University of Technology, The Netherlands

Adaptive Threshold Nonlinear Algorithm for Adaptive Filters with Robustness Against Impulse Noise ........................................ III-1644
  S. Koike - NEC Corporation, Japan

Adaptive Subspace Estimation: Application to Moving Sources Localization and Blind Channel Identification ................................ III-1648
  C. Riou, T. Chonavel, P. Cochet - ENSTBr, France

Average Quantizer Adaptation Rates for Stable ADPCM ................................................................ III-1652
  S. Dasgupta - University of Iowa, USA

Efficient Approximate Implementations of the Fast Affine Projection Algorithm Using Orthogonal Transforms ................................ III-1656
  S. Douglas - University of Utah, USA

A Statistical Reference Criterion for Adaptive Filtering ........................................................................ III-1660
  J. Sala, G. Vazquez - Universitat Politecnica de Catalunya, SPAIN

Extended Anti-Hebbian Adaptation for Unsupervised Source Extraction ........................................ III-1664
  Z. Malouche, O. Macchi - Laboratoire de Signaux et Systemes, France
DSP11  Signal Reconstruction I

Nonseparable Sampling Theorems for Two-Dimensional Signals ........................................... III-1668
Y. Lin, P. Vaidyanathan - California Institute of Technology, USA

Non-Iterative Implementation of a Class of Iterative Signal Restoration Algorithms .................. III-1672
D. Walsh, P. Delaney, M. Marcellin - University of Arizona, USA

New Results on Observation Selection in Signal Reconstruction ........................................... III-1676
S. Reeves, Z. Zhao - Auburn University, USA

A New Inverse Filter Criterion for Blind Deconvolution of Spiky Signals Using Gaussian Mixtures III-1680
I. Santamaria-Caballero, C. Pauleon-Prieto - ETSI Telecom, Spain
F. Diaz-De-Maria, A. Artes-Rodiguez - Ciudad Universitaria, SPAIN

A New Linear Co-Channel Interference Mitigation Algorithm ........................................... III-1684
S. Heidari, C. Nikias - University of Southern California, USA

Spectrum-Blind Minimum-Rate Sampling and Reconstruction of Multiband Signals .................. III-1688
P. Feng, Y. Bresler - University of Illinois, USA

1-D and 2-D Minimum and Non-Minimum Phase Retrieval by Solving Linear Systems of Equations III-1692
A. Yagle - University of Michigan, USA

Phase Retrieval Using the Wavelet Transform ................................................................ III-1695
A. Bell - University of Michigan, USA

Signal Processing and Piecewise Convex Estimation ..................................................... III-1699
K. Riedel - New York University, USA

DSP12  Adaptive Equalization: Subband and Frequency Methods

Equalisation of Time Variant Communications Channels: Channel Estimation Based Approaches III-1703
T. Shimamura - Loughborough University of Technology, UK
S. Semnani - British Telecommunication Labs, UK
C. Cowan - Loughborough University of Technology, UK

A Differential Error Reference Adaptive Echo Canceller for Multilevel PAM Line Codes ........ III-1707
I. Perez Alvarez, J. Paez-Borrillo, S. Zazo Bello - ETSI Telecomunicacion, Spain

C. Shang, C. Cowan, M. Holt - Loughborough University of Technology, UK

Full-Duplex Fast Estimation of Echo and Channel Responses in the Presence of Frequency Offsets in both Far Echo and Far Signal III-1715
W. Li, Y. Wang, X. Chen - Beijing University of Posts and Telecommunications, China
N. Miki - Hokkaido University, Japan

Channel Equalization Using Radial Basis Function Network ........................................... III-1719
J. Lee, C. Beach, N. Tepedelenlioglu - Florida Institute of Technology, USA

Finding Misconvergences in Blind Equalizers and a New Variance-Constraint Cost Function to Mitigate the Problem ... III-1723
M. Minardi, M. Ingram - Georgia Institute of Technology, USA

A Subband Adaptive Filter with a Variable Analysis Filter Bank ................................ III-1727
Y. Higa - Texas Instruments Tsukuba Research & Development Center Ltd, Japan
H. Ochi, S. Kinjo - University of the Ryukyus, Japan

A Block Quasi-Newton Algorithm Implemented in the Frequency Domain ......................... III-1731
K. Berberidis - Computer Technology Institute, Greece
J. Palicot - CCETT, SRA/DCS, France

Subband Adaptive Filters with Zero Alias Component Constraints ................................ III-1735
S. Zimmermann, G. Williamson - Illinois Institute of Technology, USA

Wavelet Transform Domain RLS Algorithm ............................................................. III-1739
S. Hosur - University of Minnesota, USA
Volume III

DSP13  DSP Applications

Modified B-Spline Interpolators and Filters: Synthesis and Efficient Implementation
K. Egiazarian, T. Saramaki, J. Astola, H. Chugurian, J. Astola - Tampere University of Technology, Finland

Simulation of Coupled Transmission Lines by Multidimensional Wave Digital Filters
H. Krauss - University of Erlangen, Germany

An Eigenstructure Technique for Soft Synchronization of DSSS Signals
N. Mangalvedhe, J. Reed - Virginia Tech, USA

Bowing Virtual Strings
J. Guerard, X. Boutillon - Laboratoire d'Acoustique Musicales, France

Convergence Analysis of the Subspace Tracking Algorithms PAST and PASTd
B. Yang - Ruhr University Bochum, Germany

Joint Optimal Impulse Response Shortening
P. Melsa, C. Rohrs, R. Younce - Tellabs Research Center, USA

Design of Training Data-Based Quadratic Detectors with Application to Mechanical Systems
S. Samimi, G. Rizzoni - The Ohio State University, USA

Deconvolution of Electrogram to Detect Infarcted Myocardium
W. Ellis, S. Eisenberg - University of California at San Francisco, USA
D. Auslander - University of California at Berkeley, USA
M. Dae - University of California at San Francisco, USA
A. Zakhor - University of California at Berkeley, USA
M. LeSh - University of California at San Francisco, USA

Detection of Cardiac Arrhythmias Using a Damped Exponential Modeling Algorithm
S. Chen, P. Clarkson - The Ohio State University, USA

Blind Equalization: A New Convex Cost Function
V. Shtrom, H. Fan - University of Cincinnati, USA

DSP14  Signal Reconstruction II

Affine Scaling Transformation Based For Computing Low Complexity Sparse Solutions
B. Rao, I. Gorodnitsky - University of California at San Diego, USA

Consistency in Quantized Matching Pursuit
V. Goyal, M. Veierli - University of California at Berkeley, USA

New Algorithm for Convex Set Constrained Signal Reconstruction
S. Dharanipragada - Johns Hopkins University, USA

Robust Constrained Deconvolution
E. Sekko, P. Sarri, G. Thomas - LAGEP URA CNRS D, France

Separation of a Mixture of Chaotic Signals
T. Lo - Defense Research Establishment Ottawa, CANADA
H. Leung - Defense Research Establishment Ottawa, Canada
J. Litva - McMaster University, Canada

Fractal PN Signals for Broadband Communications: Interpolation Functions and PN Wavelets
G. Frelend, T. Durrani - University of Strathclyde, UK

Multiscale Analysis of Fractal Point Processes and Queues
W. Lam, G. Wornell - Massachusetts Institute of Technology, USA

Modeling Techniques for Multiscale Difference Equation Signal Models
M. Ali, A. Tewfik - University of Minnesota, USA

Perfect Reconstructing Non-Linear Filter Banks
D. Florencio - Georgia Institute of Technology, USA
R. Schafer - Georgia Institute of Technology, USA

Time-Frequency Distributions Based on Teager-Kaiser Energy Function
W. Lin, P. Chitrappa - Dialogic Corporation, USA
DSP15  Adaptive Filtering (LMS and Gradient Methods)

Simplified Global Least Mean Square for Adaptive IIR Filtering ................................................ III-1822
W. Edmonson, K. Srinivasan - University of Florida, USA

A Robust FLS Algorithm for LCMV Adaptive Broad-band Beamformer .................................. III-1826
L. Resende, J. Romano - UNICAMP/Brazil, Brazil
M. Bellanger - CNAM/France, France

Instrumental Variables (IV) and Prediction Error PE-like Second Order Recursive Algorithms ........ III-1830
H. Broman, A. Andersson - Chalmers University of Technology, Sweden

Linear and NonLinear Conjugate Gradient Methods for Adaptive Processing ........................ III-1834
S. Smith - MIT Lincoln Laboratory, USA

A New Fully Adaptive Algorithm with Assured Stability for Adaptive Active Noise Control ........ III-1838
F. Jiang, N. Ojiro, H. Ohmori, A. Sano - Keio University, Japan

Adjoint LMS: An Efficient Alternative to the Filtered X-LMS and Multiple Error LMS Algorithms .... III-1842
E. Wan - Oregon Graduate Institute, USA

A Kurtosis-Driven Variable Step-Size LMS Algorithm ................................................................. III-1846
D. Pazaitis, A. Constantinides - Imperial College, UK

The LMK Algorithm with Time-Varying Forgetting Factor for Adaptive System Identification in Additive Output Noise III-1850
O. Tanrikulu, A. Constantinides - Imperial College, UK

Convergence of the DLMS Algorithm with Decreasing Step Size ............................................. III-1854
S. Ahn - Korea University, ROK
P. Voltz - Polytechnic University, USA

Parallel Implementation of a Class of Algorithms Linking NLMS and Block RLS .......................... III-1858
M. Moonen - Katholieke Universiteit Leuven, Belgium
