International Symposium on Rye Breeding & Genetics

University of Hohenheim
Stuttgart, Germany
27-29 June 1996

EUCARPIA
European Association for Research on Plant Breeding
Cereal Section
Table of Contents

Preface
Acknowledgements

1. Breeding

Papers:
- L.J. Madej: Worldwide trends in rye growing and breeding  
- M. Karpenstein-Machan and R. Maschka: Progress in rye breeding  
- P. Wilde: Multi-stage selection for combining ability among pollen parent lines in hybrid rye breeding  
- H.H. Geiger and T. Miedaner: Genetic basis and phenotypic stability of male-fertility restoration in rye  
- R. Warzecha and K. Salak-Warzecha: Comparative studies on CMS sources in rye  

Posters:
- A.A. Goncharenko and A.V. Makarov: The integral evaluation of adaptive potential for winter rye varieties  
- L. Grochowski, J. Kaczmarek, W. Kadlubiec, and H. Bujak: Characterization of xenic rye hybrids  
- L. Kedrova, J. Saveljev, and T. Sheshegova: Adaptive selection of the winter rye in the north-east of non-black earth zone of Russia  
- I. Kolasinska: Inbreeding depression of quantitative characters in winter rye  
- I. Kolasinska: Pollen fertility restoration in topcross hybrids of winter rye  
- H. Kubicka and S. Malepszy: Red-stem character in winter rye (Secale cereale L.)  
- V. Kukk and I. Tupits: Short-strawed breeding line Dm.  
- N.S. Lapikov, A.G. Katerova, and V.D. Kobylianski: Preliminary evaluation of initial breeding material from Poland for breeding hybrid rye in Russia  
- A. Schubert and V. Schubert: Selection and characterization of self-fertile light-grained rye inbred lines  
- I.N. Xynias and D.G. Roupakias: Effectiveness of honeycomb selection in successive generations in rye (Secale cereale L.)
2. Quality

Papers:

M. Rakowska: The nutritive quality of rye
J.G. McLeod, Y. Gan, G.J. Scoles, and G.I. Campbell: Extract viscosity and feeding quality of rye
D. Weipert: Pentosans as selection traits in rye breeding
T. Presterl, F. Spanakakis, A. Loock, F. Rattunde, T. Miedaner, and H.H. Geiger: Improving falling number in rye: Genetic basis and selection strategies

Posters:

D. Boros and L. Madej: The nutritional approach in rye hybrid breeding
A.J. Lukaszewski and W. Brzezinski: Diploid rye with high molecular weight glutenin subunits 5+10 from wheat
F. Machář: Productivity and quality of rye hybrids and possibilities of their further spreading in the Czech Republic
P. Maseń, S. Stojalowski, P. Milczarsky, and M. Łapinski: Relationship between responsiveness of rye grain to abscisic acid (ABA) and sprouting resistance
M. Smiech, Z. Przybecki, and S. Malepszy: Inheritance of protein content and 1000-grain weight in inbred lines of rye (Secale cereale L.)
A. Täufel, W. Flamme, G. Jansen, and R. Czauderna: Activities of two types of α-amylase inhibitors in rye in relation to wheat and triticale
J. Jagodzinski and M. Rakowska: Feeding value of the grain of rye inbred lines and hybrids

3. Disease Resistance

Papers:

V.D. Kobylanski and O.V. Solodukhina: Genetic bases and practical breeding utilization of heterogenous resistance of rye to brown rust
T. Miedaner, G. Gang, and H.H. Geiger: Genetics of resistance and aggressiveness in the winter rye/Fusarium culmorum head blight pathosystem

Posters:

J. Bojarzczuk and J. Bojarzczuk: Efficiency of breeding and selection of diploid winter rye population SMH82 (Bambino) for complex resistance to fungal diseases
L. Brykczynska, M. Tomkowiak, and J. Chelkowski: Rye seedlings susceptibility to snow mould and Fusarium culmorum - comparison of two methods of evaluation
J. Chelkowski, M. Tomkowiak, S. Wojciechowski, A. Ponitka, and A. Slusarkiewicz-Jarzina: Reaction of rye, wheat and triticale root and coleoptiles to Fusarium culmorum infection
J. Frackowiak and J. Bojarczuk: Effectiveness of breeding and selection of diploid winter rye population SMH-100-szelejewskie for resistance against brown rust \((Puccinia dispersa)\) and powdery mildew \((Erysiphe graminis f. sp. secalis)\)  
A.-K.M. Gey, T. Miedaner, and H.H. Geiger: Relationship between leaf rust resistance of inbred lines and testcrosses in winter rye  
S.L.K. Hsam and F.J. Zeller: Allelism of mildew resistance genes Pm8 and Pm17 in wheat-rye translocated chromosome T1BL.1RS  
K. Nyga and J. Bojarczuk: Effectiveness of breeding SMH 203-Borowskie rye population towards improvement of brown rust \((Puccinia dispersa)\) and mildew \((Erysiphe graminis f. sp. secalis)\) resistance  
M. Pronczuk and L.J. Madej: Evaluation of \textit{Microdochium nivale} infection on rye genotypes using different methods  
M. Scholz and P. Wehling: Genetic analysis of resistance to leaf rust \((Puccinia recondita f. sp. secalis)\) in rye  
C. Reinbrecht, T. Miedaner, M. Schollenberger, U. Lauber, and H.H. Geiger: Comparison of mycotoxin accumulation in grains of rye, triticale, and wheat inoculated with \textit{Fusarium culmorum}  
A.A. Sharakhov: Study of winter rye resistance to stem rust \((Puccinia graminis Pers. f. sp. secalis)\)  
A. Torop and V. Dedyaev: Breeding of rye forms resistant to diseases and pests  

4. Stress Tolerance  

Paper:  
A. Aniol and L. Madej: Genetic variation for aluminium tolerance in rye  

Posters:  
A. Hartmann, T. Miedaner, and H.H. Geiger: Genetic variability of hybrid rye under low nitrogen conditions  
B. Hoffmann and G. Galiba: The combined effect of nutrient and drought stress on various rye \((Secale cereale L.)\) genotypes  
D. Rzepka-Plevnes: The tolerance of various winter rye genotypes to nitrogen, potassium and phosphorus deficiency under laboratory conditions  
O. Pinto-Carnide and H. Guedes-Pinto: Differential behaviour of rye Portuguese populations and European varieties to aluminium toxicity  

5. Biotechnology  

Papers:  
A.M. Castillo, V. Vasil, and I.K. Vasil: Genetic transformation of rye \((Secale cereale L.)\)  
S. Deimling and H.H. Geiger: Anther culture in rye: Methodical improvements and genetic analysis  
S. Immonen and H. Anttila: Success in anther culture of rye  
A.M. Vázquez, E. Alves, J.J. Muñoz, and R. Linacero: Molecular aspect of somaclonal variation in rye
Posters:
M. Rakoczy-Trojanowska, A. Kwaśniak, and S. Malepszy: Factors influencing viability and sporophytic development in vitro of rye (Secale cereale L.) microspores 256
M. Rakoczy-Trojanowska, R. Pietrzykowski, and S. Malepszy: Somaclonal variation of some quantitative traits of rye (Secale cereale L.) 258
M. Rakoczy-Trojanowska, M. Smiech, and S. Malepszy: An evaluation of the factors influencing anther culture of rye (Secale cereale L.) 260

6. Molecular Markers

Papers:
G. Wricke: Use of genetic markers in rye breeding 263
A. Börner and V. Korzun: Genetics and comparative mapping of genes controlling plant height and development 273

Posters:
F. Dreyer, T. Miedaner, and H.H. Geiger: Chromosomal localization of male-fertility restorer genes from Argentinian and Iranian rye 280
B.A. Große, S. Deimling, and H.H. Geiger: Mapping of genes for anther culture ability in rye by molecular markers 282
V. Korzun, A. Volyokov, and A. Börner: RFLP mapping of genes for self-fertility (Sfr) and absence of ligules (al) in rye 284
A. Linz and P. Wehling: Identification of molecular markers for leaf rust resistance in rye (Secale cereale L.) 286
B. Myskow, P. Milczarski, and P. Masojć: Genetic mapping of isozymatic markers on rye chromosomes 288
B. Saal and G. Wricke: Extending the genetic map of rye (Secale cereale L.) 290

7. Cytogenetics

Papers:
A. Cuadrado and N. Jouve: Phylogenetic relationships in the genus Secale as revealed by FISH 293

Posters:
B. Apolinarska: Additions, substitutions and translocations of wheat chromosomes in tetraploid rye 304
J. Pilch, L. Kubara-Szpunar, and E. Glowacz: Using the correlation coefficient for chromosomal localization of some genes in rye (Secale cereale L.) 308

8. Genetic map of rye

R. Schlegel and G. Melz: Genetic linkage map of rye (Secale cereale L.) 311
