CONTENTS

1.0 COMET DAY II
Organized by Mark Boslough, Sandia National Laboratories, Albuquerque, NM

1.1 COMET DAY II: ORBITAL DEBRIS AND MICROMETEORITES
Space Station Module Wall Hole Size and Crack Length Following Orbital Debris Penetration at 6.5 km/s
William P. Schonberg and Joel E. Williamsen ................................................. 1
Techniques to Obtain Orbital Debris Encounter Speeds in the Laboratory
Lalit C. Chhabildas .......................................................................................... 8
The Danger to Satellites from Meteor Storms—A Case Study of the Leonids
P. Brown, J. Jones, and M. Beech .................................................................. 13
Space Debris Hazard to Defense Systems
Gregory H. Canavan ...................................................................................... 20

1.2 COMET DAY II: NEAR EARTH OBJECTS—DETECTION AND MITIGATION
Optimal Detection of Short-Warning Near Earth Object Threats
Gregory H. Canavan ...................................................................................... 26
Air Force Planetary Defense Technology
J. Darrah, S. Worden, and G.H. Stokes ........................................................... 32
Air Force Planetary Defense System: Initial Field Test Results
Grant Stokes, Robert Weber, Frank Shelly, David Beatty, Herbert Viggh,
Eugene Rork, and Byron Hays ................................................................... 46
Issues of Landing on Near Earth Asteroids
D.J. Scheeres, S.J. Ostro, and R.S. Hudson .................................................. 54
On Exploration and Usage of Near-Earth-Missing Objects
V.A. Simonenko .......................................................................................... 61
Methods of Experimental Research of Asteroid Properties in Space Missions
D.V. Petrov, V.A. Simonenko, and O.N. Shubin ............................................. 68
Nuclear Explosion Near the Surface of the Asteroids and Comets—II. General Description of the Phenomenon
O.N. Shubin, V.Z. Nechai, V.N. Nogin, D.V. Petrov, and V.A. Simonenko ...... 74

1.3 COMET DAY II: BOLIDES AND ATMOSPHERIC ENTRY PHENOMENA
A Model of Meteoroid Atmospheric Entry with Implications for the NEO Hazard and the Impact of Comet Shoemaker-Levy 9 on Jupiter
D.A. Crawford and M.B. Boslough ............................................................... 81
Impact-Generated Atmospheric Plumes: The Threat to Satellites in Low-Earth Orbit
M.B. Boslough and D.A. Crawford ............................................................... 88
Sizes and Masses of Satellite-Observed Meteoroids
Z. Ceplecha, R.E. Spalding, C. Jacobs, and E. Tagliaferri .................................................. 95

Acoustic Efficiency Analysis Using Infrasound from NEO's
Douglas O. ReVelle and Rodney W. Whitaker ................................................................. 102

2.0 SPACE 96: Advocacy, The Future, Commercial Space, Remote Sensing,
Space Solar Power, and Advanced Concepts

2.1 SPACE ADVOCACY AND THE FUTURE: ACTIVITIES WORLDWIDE

Planning An International Moon Mission: Lessons Learned
Joan Johnson-Freese ........................................................................................................ 109

The Space Exploration Initiative: Its Failure and Lessons for the Future
Matthew Fisk Marshall ...................................................................................................... 116

Human Space Exploration: Justifications and U.S. Space Policy
Arthur M. Hingerty ........................................................................................................... 126

The Moon Within Our Grasp: A Strategy for Renewing Human Exploration
of the Moon
Andrew Petro ....................................................................................................................... 133

Construction System for Lunar Base
Shinji Matsumoto, Nobuo Isome, Koji Oishi, Hiroshi Kanamori, Kenji Takagi,
Yoshirou Kai, Michiya Suzuki, and Satoru Suzuki .................................................... 140

Long Term Scenarios for Europe in Space
Klaus Pseiner, Angelo Atzei, and David Raitt ............................................................... 145

On the Process and Products of Project Space Vision
Pär Edin .............................................................................................................................. 155

2.2 SPACE COMMERCIALIZATION

Fifteen Years of Commercial Space in Retrospect
Brian M. Barnett .................................................................................................................. 162

Pathfinder: Commercial Payload Service on the Russian MIR Space Station
Brent Sherwood and Thomas J. Walmsley ........................................................................ 170

Analysis of Alternative Governance Models for Space Business Parks
Charles J. Lauer .................................................................................................................. 177

Government Actions to Enable Space Business Parks
Brent Sherwood, Charles J. Lauer, and Joseph P. Hopkins, Jr. ....................................... 186

Lunar Sample Return: A Near-Term Marketing Opportunity?
Brad R. Blair ......................................................................................................................... 194

Design and Construction of a Zero-Gravity Gymnasium
Patrick Collins, Sunao Kuwahara, Tsuyoshi Nishimura, and Takashi Fukuoka .... 200

US Space Policy and the Use of Excess Ballistic Missile Assets
Michael Trial ....................................................................................................................... 206

2.3 COMMERCIAL REMOTE SENSING
Organized by Sandra C. Feldman, Bechtel Group, Inc.; San Francisco, CA

Interferometric Imaging for Deep Space Asset Monitoring
Gary C. Loos ....................................................................................................................... 214
Spaceborne Fourier Transform Hyperspectral Imager  
Leonard John Otten, III, Andrew D. Meigs, and R. Glenn Sellar ........................................ 224
Remote Pipeline Routing with Application to Space Operations  
Sandra C. Feldman, Ramona E. Pelletier, Wm. Edward Walser, James C. Smoot, and Douglas Ahl .......................................................... 231
Operational Satellite Remote Sensing for Mineral Exploration  
Charles Sabine .................................................................................................................. 237
21st Century Earth Observing Systems: Emerging Role for Spaceports  
Stanley A. Morain .......................................................................................................... 245

2.4 SPACE SOLAR POWER  
Organized by Michael Duke, NASA Johnson Space Center, Houston, TX; and Lunar and Planetary Institute, Houston, TX

Review of the Solar Power Satellite  
James McSpadden and Kai Chang .................................................................................. 254
The Economics of Space Solar Power  
Carissa Bryce Christiansen, Douglas A. Comstock, and John C. Mankins ...................... 260
“SPS-2000” and Its Internationalization  
Patrick Collins .............................................................................................................. 269
Rocket Experiments and Demonstrations for Microwave Power  
Transmission (MPT)  
Nobuyuki Kaya ............................................................................................................. 280
The Production of Photovoltaic Devices in Space  
Alex Ignatiev and A. Freundlich .................................................................................... 287
World and Lunar Solar Power Systems Costs  
David R. Criswell ........................................................................................................ 293

2.5 ADVANCED CONCEPTS

The Solar System Cruiser—Interstellar Precursor  
Divya Chander ............................................................................................................... 302
Design of a Multi-Generational Interstellar Ship  
Divya Chander .............................................................................................................. 311
BootStrapping Space Resource Utilization with Tethers, Regolith Rockets, and Micro Rovers  
Bruce A. Mackenzie .................................................................................................... 321
Nanotechnology and Orbital Debris  
Hans-Joachim Blome and Thomas L. Wilson .................................................................. 328
ORDER—A Preliminary Concept for ORbital DEbris Removal  
Brian A. Phail ................................................................................................................ 334
An AI Agent Construct for Space and Planetary Science Applications  
Lee Plansky and Nancy Linarez-Royce ........................................................................ 341
Innovative Radiation Shields for Lunar Surface Operations  
Milton Schwartz and Raymond S. Leonard .................................................................... 349
Flywheels for Energy Storage in Space Using Superconducting Bearings  
T.L. Wilson, W.-K Chu, K. Ma, and H. Xia .................................................................... 355
Space Infrastructure Planning  
J. Michael Snead .......................................................................................................... 360
Building Large Space Bases in Low Earth Orbit
J. Michael Snead ........................................................................................................... 367

High Frequency Access to Low Gravity Experimentation in Organic Crystal Growth from Solutions
Michael G. Sportiello, Paul Todd, Ching-Yuan Lee, Craig E. Kundrot,
Steve C. Schultz, Louis S. Stodieck, and John M. Cassanto ........................................ 378

3.0 SPACE 96: Access to Space, Space Station, Science and Engineering, and Technologies and Innovations

3.1 ACCESS TO SPACE
Organized by John Bertin, Department of Aeronautics,
US Air Force Academy, Colorado

The NASA Reusable Launch Vehicle Technology Program
Delma C. Freeman, Theodore A. Talay, and Robert E. Austin .................................. 385

Johnson Space Center Crew Return Vehicle Activities
Charles H. Campbell, B. Kent Joosten, and Robert E. Meyerson ....................... 392

Japanese Rocket Society's Space Tourism Study Program
Patrick Collins ........................................................................................................... 399

Space Applications of Surplus Ballistic Missiles
Matthew A. Bille ................................................................................................. 406

The CSG 2000 programme—Modernising Europe's Spaceport for the next 20 years
Juan de Dalmau ........................................................................................................ 413

Sea Launch—Commercial Launch Competitiveness
Derek E. Lang, Darrel L. Choate, and Marcus L. Nance ........................................ 419

Space Shuttle Program—Defining a Needed Paradigm for Efficient Access to Space
Lyle M. Jenkins ........................................................................................................ 426

3.2 INTERNATIONAL SPACE STATION—PROCESSES AND INTEGRATION
Organized by Larry D. Toups, Space Station Program Office,
NASA Johnson Space Center, Houston, TX

International Space Station (ISS) Assembly Sequence Planning
R.E. Gates ............................................................................................................... 435

International Space Station Traffic Model Development
Clare T. Kingsford and Neil W. Lemmons ................................................................ 443

An Integrated Approach to Maintaining a Program Baseline on the International Space Station
Roy Patrick Norris and Larry D. Toups ................................................................. 450

World-Wide Command and Control: Operating the International Space Station
Michael J. See ........................................................................................................ 458

xii
3.3 INTERNATIONAL SPACE STATION—CREW AND ROBOTIC SYSTEMS, UTILIZATION AND OPERATIONS
Organized by Larry D. Toups, Space Station Program Office, NASA Johnson Space Center, Houston, TX

Flight Crew Equipment Development and Integration with the International Partners
Rod Jones ........................................................................................................ 467
Overview of International Space Station Extravehicular Activity System
Jeff Dutton ....................................................................................................... 473
International Space Station Payload Accommodations
Daniel W. Hartman .......................................................................................... 480
Overview of International Space Station Extra Vehicular Robotics
Amin Rezapour .................................................................................................. 490
Overview of the ISS Large Manipulator Operations
Catherine D. Bole ............................................................................................. 497
Overview of the International Space Station Extra Vehicular Robotics Verification
Corrie Hunt ...................................................................................................... 502

3.4 SCIENCE AND ENGINEERING IN A LOW GRAVITY ENVIRONMENT
Organized by Robert Rhome, NASA HQ, Washington, DC

Process Research in Support of Human Exploration and Development of Space: Issues in Program Development
Bradley M. Carpenter ....................................................................................... 509
Issues on Geomechanics
Nicholas C. Costes and Stein Sture .................................................................. 516
Fluid Management in Space-Based Systems
Jack A. Salzman ............................................................................................... 521
Combustion Processes and Applications in Reduced Gravity
Howard D. Ross .................................................................................................. 527

3.5 TECHNOLOGIES AND INNOVATIONS RELATED TO SPACE STATION

Investigation of On-orbit Servicing Robot
T. Matsue and Y. Wakabayashi ........................................................................ 533
Vibration Isolation for Space Station Microgravity Using High Temperature Superconductors
W.K. Chu, K. Ma, H. Xia, and T.L. Wilson ....................................................... 540
Flow Induced Charging of Liquids in Reduced Gravity
Donald Pettit ....................................................................................................... 545
Development of Pressure Suit Simulation System for Neutral Buoyancy Operations
David L. Akin and Claudia Ranniger ................................................................ 552
A Concept of Driving on Orbital Station
M. Malenkov, V. Gorbunov, S. Vladykin, V. Zhivoglotov, R. Beglov, and V. Syromyatnikov ................................................................. 559
4.0 SPACE 96: Extraterrestrial Missions, Lunar and Mars Bases, Data Needs, Siting, Resources, Mining, and Astronomy

4.1 LUNAR CONCRETE AND PLANETARY DEVELOPMENT
Organized by T.D. Lin, Lintek International, Wilmette, IL

Concrete—A Practical Construction Material for Mars
David S. McKay and Carlton C. Allen ........................................... 566

Using Ultra High Solar Flux in the Lunar Environment: Production of Cement and Other Applications
Joseph J. O’Gallagher .................................................................. 571

Concrete Space Station Construction in Lunar Orbit
Don J. Wade ............................................................................. 578

Heat of Hydration of Pure Cement Compounds with Steam
Wei-Ming Lin, T.D. Lin, Chao-Lung Hwang, and Yaw-Nan Peng ........... 585

Lunar Concrete Made with Dry-Mix/Steam-Injection Method
T.D. Lin, Liang Tseng, and Sam Chou ........................................... 592

Pore Structure Evolution and State of Pore Water in Hydrating Cement Paste
at Cryogenic Temperatures

Behavior of Fresh Mortar in a Vacuum and Microstructure of Mortar Hardened in a Vacuum
L.J. Powers-Couche and T.D. Lin .................................................. 608

Use of Lunar Type Soil for Concrete Construction
Jay N. Meegoda, Hsin-Yu Shan, Jing-Fu Huang, Jia-Wen Tseng,
and Su-Hwa Cheng .................................................................. 614

Study on Lunar Cement Production Using Hokkaido Anorthite and Hokkaido Space Development Activities
T. Horiguchi, N. Saeki, T. Yoneda, T. Hoshi, and T.D. Lin ...................... 621

4.2 SELECTED PAPERS FROM THE TASK COMMITTEE ON DATA NEEDS FOR LUNAR CONSTRUCTION
Organized by members of the committee

Lunar Regolith
John V. Gies ........................................................................ 630

The Effect of the Lunar Surface Environment Upon Machinery
John V. Gies ........................................................................ 639

Continuing Data Needs for Lunar Radiation Protection
Richard R. Roll ...................................................................... 646

Meteoroid Hazards in the Lunar Environment
Frank J. Rooney and John V. Gies ............................................... 653

The Water Customer in Space
Tony Rachwel, Colin Waters, and Tony Wachinski .............................. 663

Protection of and from the Lunar Environment
Anthony M. Wachinski, Tony Rachwal, and Colin Waters ................. 668

xiv
4.3 LUNAR AND PLANETARY PROPERTIES
(IDENTIFICATION AND CHARACTERIZATION)

REGA (Regolith Evolved Gas Analyzer)
David S. McKay and Carlton C. Allen ......................................................... 673

Mechanical Properties of JSC-1 Lunar Regolith Simulant
J. LEDIE KLOSKY, STEIN STURE, HON-YIM KO, AND FRANK BARNES .................. 680

Surface Cleanliness Effects on Lunar Regolith Shear Strength
Howard A. Perko, John D. Nelson, and Willy Z. Sadeh ..................................... 689

4.4 DEVELOPMENT OF LUNAR AND PLANETARY RESOURCES

Lunar Excavating Research
WALTER W. BOLES AND JOHN F. CONNOLLY .................................................. 699

Pulling Propellants Out of Thin Air: Demonstration of an End-to-End Mars In-Situ Propellant Production Unit
JOHN F. CONNOLLY AND ROBERT M. ZUBRIN ................................................ 706

Mars Sample Return Using In-Situ Propellant Production
DAVID I. KAPLAN .............................................................................................. 717

A Comparison of Alternative Methods for Mars Sample Return Mission
ROBERT ZUBRIN ............................................................................................... 724

Carbon Reduction of Iron Oxides in Lunar Simulants
SCOTT HAYES, HEATHER HAMLETT, AND ROBERTA BUSTIN .............................. 734

4.5 SITING A LUNAR BASE AND DEVELOPMENT OF RESOURCES

Location of a Lunar Base: A Site Selection Strategy
LAWRENCE A. TAYLOR AND DONG-HWA S. TAYLOR .......................................... 741

Volcanic Glass—Oxygen Ore on the Moon
Carlton C. Allen, John M. Woodell, and David S. McKay .................................... 756

A Preliminary Design of a Pilot Plant for the Production of Lunar Oxygen

Digital Image Analysis of Two-Dimensional Fluidized Beds at Lunar Gravity
D.J. Brueneman, M.A. Gibson, C.W. Knudsen, and H. Kanamori ............................ 769

Standpipe Solids Transfer Behavior in a Lunar Gravity Fluidized Bed
Les L. Sorge, D.J. Brueneman, J. Dale Ortega, Michael A. Gibson,
Christian W. Knudsen, Hiroshi Kanamori, and B. Kent Joosteen .......................... 776

Optical Waveguide Solar Energy System for Lunar Materials Processing
T. Nakamura, J.A. Case, and C.L. Senior .......................................................... 783

4.6 SPACE MINING
Organized by Brad R. Blair, Neil and Associates, Golden, CO
and John V. Gies, P.E., Tiburon, CA

Discovery of Abundant Accessible Hydrocarbons Nearly Everywhere in the Solar System
A. Zupero ........................................................................................................... 791
