Proceedings of ISMA21

1996 International Conference on

Noise and Vibration Engineering

Volume I
Table of Contents

Keynote

- Beyond 2000 - Concepts in structural vibrations and acoustics
  
  Prof. D.L. Brown, University of Cincinnati, USA.

- Is NVH still an obstacle in automotive product design?
  
  Prof. U. Sorgatz, TH Aachen, Germany.

Vehicle pass-by noise -
Results of the Brite-Euram project PIANO

Special session SPIA1

- Microphone array techniques for non-stationary truck noise measurements
  
  J. Hald, Brüel & Kjær, Denmark.

- Evaluation of truck engine noise radiation and encapsulation insertion loss through the substitution monopole technique
  
  M. Mantovani, C. Bertolini, Centro Ricerche Fiat, Italy.

- Use of a new acoustical source descriptor for designing quieter heavy road vehicles
  
  J. W. Verheij, L. J. M. Hopmans, TNO Institute of Applied Physics, The Netherlands;
  R. M. J. Liebregts, DAF Trucks N.V., The Netherlands.

- Correction of indoor pass-by noise measurements to estimate ISOR362 outdoor noise using acoustic transfer functions
  
  P. J. G. van der Linden, S. Goossens, LMS International, Belgium;
  O. Jönsson, Scania, Sweden.

- Truck pass-by noise, detailed sources contribution identification during ISOR362 pass-by
  
  P. J. G. van der Linden, LMS International, Belgium;
  H. Defay, J. P. Le Martret, Renault VI, DER5-SAMC-Service, France.

- Prediction of insertion loss of engine enclosures by indirect BEM calculations, combined with a substitution monopole source description technique
  
  F. Augusztinovicz, P. Sas, K.U.Leuven, Belgium;
  L. Cremers, LMS Numerical Technologies, Belgium;
  R. Liebregts, DAF Trucks N.V., The Netherlands;
  M. Mantovani, C. Bertolini, Centro Ricerche Fiat, Italy.
**Vibro-acoustic modelling and prediction**

**Special session SVAM1**

- On the influence of finite acoustical source dimensions on acoustical frequency response functions inside an enclosed cavity  
  *K. Wyckaert, L. Meulewaeter, LMS International, Belgium.*  
  \[69\]

- Medium-frequency expansion of a partially measured FRF matrix  
  *L. Bregant, Università di Trieste, Dip. di Energietica, Italy;*  
  \[81\]

- A new wave based prediction technique for coupled vibro-acoustic analysis: theoretical description and application to a double wall structure  
  \[105\]

**Applications of Statistical Energy Analysis**

**Special session SSEA1**

- Predictive Statistical Energy Analysis using the wave approach  
  *K. H. Heron, DRA Farnborough, Structures Dept., UK.*  
  \[135\]

- Three conservatively or two non-conservatively coupled subsystems: Can a dual interpretation be used?  
  *C. Fredö, Chalmers University, Dept. of Applied Acoustics, Sweden.*  
  \[145\]

- Experimental SEA on a highspeed train carriage  
  *K. De Meester, L. Hermans, K. Wyckaert, LMS International, Belgium;*  
  *N. Cuny, CEG Alsthom, France.*  
  \[151\]

- Use of SEA to reduce the noise in the driver's cabin of a TGV high speed train  
  *A. Fages, GEC-Alsthom, France;*  
  *G. Borello, InterAC, France.*  
  \[163\]

- The process to experimentally identify the Statistical Energy Analysis parameters of industrial structures: step by step  
  *L. Hermans, K. Wyckaert, LMS International, Belgium;*  
  *K. Delanghe, LMS Numerical Technologies, Belgium.*  
  \[171\]

- Analysis of initial decay rate in relation to estimates of loss factor and equivalent mass in experimental SEA  
  *Lie Wu, A. Ågren, Luleå University of Technology, Acoustics Group, Sweden.*  
  \[187\]
Active noise and vibration control -
Results of Brite-Euram projects

Special sessions SANC1 - SANC2

- Active control of vibration and sound: An overview of the patent literature
  D. Guicking, Drittes Physikalisches Inst. der Universität Göttingen, Germany. 199

- Dynamic characterization of an interior trim panel aimed at the active noise control in a turboprop aircraft
  M. Viscardi, L. Lecce, University of Naples "Federico II", Dept. Aeronautical Eng., Italy. 221

- Active control of structural vibration transmission from a vibrating rigid body to a flexible panel using two active mounts
  P. Gardonio, S. J. Elliott, R. J. Pinnington, University of Southampton, ISVR, UK. 233

- A comparison of different strategies for interior active noise control by piezoactuators
  A. Concilio, L. De Vivo, A. Sollo, CIRA ScpA, Italy. 247

- Aircraft interior noise analysis using advanced vibro-acoustic modelling
  H. Van der Auweraer, D. Otte, LMS International, Belgium. 259

- Active vibration control of road noise in automotive applications: Tools and methods to evaluate control configurations
  K. Wyckaert, LMS International, Belgium. 271

- Optimal design of laminated plates for active vibration control
  M. Resch, M. Jeger, W. J. Elspass, ETH-Zentrum, Switzerland. 283

- Multireference controllers for active control of noise and vibration
  P. Sjösten, S. Johansson, I. Claesson, T. L. Lago, University of Karlskrona/Ronneby, Sweden. 295

- Simulating the efficiency of an actively controlled dynamic system: The LACES experience
  J.-L. Migeot, L. Meulewaeter, J.-P. Rossion, LMS Numerical Technologies, Belgium;
  G. Vanderborck, W. Steichen, Thomson SINTRA ASM, France. 305

- Active isolation of noise transmission through a helicopter gearbox support strut using multiple magnetostrictive actuators
  T. J. Sutton, S. J. Elliott, M. J. Brennan, University of Southampton, UK;
  K. H. Heron, DRA Farnborough, Structures Dept., UK. 315
Active noise control

Session ANC1

- Experience of active control of noise from HVAC and industrial equipment
  G. Leventhall, S. Wise, Digisonix Inc., USA. 329

- Nonlinearities in tuned loudspeaker enclosures for active noise control
  L. A. Blondel, Faculté Polytechnique de Mons, Serv. de Physique Générale, Belgium;
  S. J. Elliott, University of Southampton, ISVR, UK. 341

- Active resonator for noise control
  R. Maier, M. Pucher, O. Bschorr, Daimler-Benz AG, F1M/GA, Germany. 353

- Active acoustic control of lightweight structures with piezoceramic actuators at higher frequencies
  R. Maier, M. Bebesel, M. Gruenewald, P. Faulhaber, Daimler-Benz AG, F1M/GA, Germany. 365

- Implementation of an active noise control system in a double-glazing window
  P. De Fonseca, W. Dehandschutter, P. Sas, H. Van Brussel, K.U.Leuven, Belgium. 377

- Determination of acoustic impedance of an IC-engine with validation on a cold engine simulator for exhaust noise
  R. Boonen, P. Sas, K.U.Leuven, Belgium. 389

Active vibration control

Session AVC1

- Active control of rolling noise in a passenger car through structural and acoustic control
  W. Dehandschutter, P. Sas, K.U.Leuven, Belgium;
  G. L. Banfo, ELESA, Italy. 401

- Hybrid feedback-feedforward control for noise and vibration suppression
  A. Preumont, P. De Man, ULB, Dept. of Mech. Eng. and Robotics, Belgium;
  Ch. Carme, D. Derrien, TECHNOFIRST, France. 413

- Artificial damping of microvibrations on optical telecommunication payloads using a novel design of a structural isolation interface
  O. Døssing, Rovsing, Denmark;
  L. Zago, CSEM, Switzerland;
  A. Pradier, ESA/ESTEC, The Netherlands;
  T. Tolker-Nielsen, ESA/ITG, France. 427

- Neural network based controller for active vibration control
  T. Uhl, T. Salamon, University of Mining and Metallurgy, Dept. Robotics, Poland;
  Z. Korendo, University of Krakow, Poland. 445
• Active damping of cable-stayed bridges  

• An investigation of nonlinear vibration in a single link flexible manipulator  
  Thanh Lan Vu, J. Pan, J. P. Trevelyan, University of Western Australia, Australia. 469

• Active electro-pneumatic suspension system  

---

**Source localisation, transfer path identification**

**Sessions SLTP1 - SLTP2**

• Study of transmission paths of vibratory energy by the principal components analysis  
  X. Carniel, C. Made, J.-C. Pascal, CETIM, Ind. Acoustic Dept., France;  
  D. Otte, LMS International, Belgium. 489

• Source imaging of irregularly shaped surfaces using inverse FRF method  

• Acoustic Holography: a tool for noise source identification and quantification  
  R. Van Cauter, P. Van de Ponseele, LMS International, Belgium. 509

• Force identification from vibration measurements in the wavenumber domain  
  A. Fregolent, A. Sestieri, Università di Roma "La Sapienza", Dip. Mecc. & Aeronautica, Italy. 517

• Practical application of transfer path analysis to resolve structure-borne noise problems in vehicle design  
  J. Romano, J. A. Lopez, BEA FASA RENAULT, Acoustic Synthesis Product Eng., Spain. 527

• Vibration transfer path analysis applied to a high performance motorcycle  
  F. Fazio, A. Lucifredi, Università di Genova, Inst. Mech. Applicata, Italy;  
  G. Camauli, M. Forte, LMS Italiana, Italy;  
  L. Marzocchi, BIMOTA, Italy. 537

• Minimisation of noise transmission through optimising hydraulic pipe mounting locations  
  A. H. M. Kwong, K. A. Edge, University of Bath, School of Mech. Engineering, UK. 549

• Sensitivity of inertially reacted engine mount - Tests to changes in engine mount rates  
  J. S. Meldrum, EG&G Structural Kinematics, USA. 559

• Statistical decision theory methods for noise and vibration engineering  
  C. Couvreur, P. Chapelle, Faculté Polytechnique de Mons, Belgium. 571
Energy Flow Analysis

Sessions EFA1 - EFA2

- Identification of flexural waves in a pipe for the characterization of a pump
  H. Andriambololona, Ph. Derbyshire, EDF, Acoust. & Vibration Mech. Branch, France. 583

- Practical investigation of structural energy flow by means of intensity, energy flow, and point power measurements
  P. Rasmussen, G.R.A.S. Sound and Vibration, Denmark. 591

- Vibrational Energy flow measurement using a high spatial density technique

- Structure-borne sound transmission between point connected plates
  J. Bosmans, G. Vermeir, K.U.Leuven, Dept. Civil Eng., Belgium. 615

- Experimental validation of Energy Flow Analysis on a two dimensional frame
  J. Moens, D. Vandepitte, P. Sas, K.U.Leuven, Belgium. 627

- Measuring flexural power flow in beams using a spatial-domain regressive discrete fourier series
  J. I. Piva, Equipamentos Clark Ltda., Brazil. 641

- Strategies for active vibration control using a structural power flow approach
  J. R. de F. Arruda, Universidade Estadual de Campinas, Dept. de Mech. Computac., Brazil;
  W. Dehandschutter, K.U.Leuven, Belgium. 653

- Response randomness of mechanical waveguides using sensitivity analysis
  A. Carcaterra, INSEAN, Italy;
  A. Sestieri, Università di Roma "La Sapienza", Dip. Mecc. & Aeronautica, Italy. 667
