CONTENTS

Foreword v
Claude Itzykson 1938–1995 vii
Dyson’s Universality in Generalized Ensembles of Random Matrices
E. Brézin 1
Meanders
P. di Francesco, O. Golinelli and E. Guitter 12
Exercises in Equivariant Cohomology and Topological Theories
R. Stora 51
N = 2 Superconformal Field Theories in 4 Dimensions and A-D-E Classification
T. Eguchi and K. Hori 67
Period Functions and the Selberg Zeta Function for the Modular Group
J. Lewis and D. Zagier 83
Statistical Properties of Random Matrices and the Replica Method
G. Parisi 98
Renormalisation Group Approach to Reaction-Diffusion Problems
J. Cardy 113
Zero Temperature Glauber Dynamics of the 1d Potts Model
B. Derrida 126
The Verlinde Formula for PGLp
A. Beauville 141
Galois Actions for Genus One Rational Conformal Field Theories
M. Bauer 152
Softly Broken N = 2 QCD
L. Álvarez-Gaumé and M. Mariño 187
Polygonal Billiards and Aperiodic Tilings
J. M. Luck 218
Physics and Arithmetic Chaos in the Fourier Transform
M. C. Gutzwiller 258
Quantum and Optical Arithmetic and Fractals
   M. V. Berry  
   281

Correlations and Transport in One-Dimensional Quantum Impurity Problems
   F. Lesage and H. Saleur  
   295

Lyapunov Exponents and Hodge Theory
   M. Kontsevich  
   318

Gauge Dynamics and Compactification to Three Dimensions
   N. Seiberg and E. Witten  
   333
