Sixth International Symposium on

Computational Fluid Dynamics

A Collection of Technical Papers

Volume II

September 4-8, 1995
Lake Tahoe, Nevada
K. Ishizaka, T. Ikohagi and H. Daiguji
A High-Resolution Numerical Method for Transonic Non-Equilibrium Condensation Flows through a Steam Turbine Cascade ................................................. 479

N. Itoga and Y. Yoshizawa
Unsteady Numerical Calculations of Advancing Rotor Flowfields with Cycle-Pitch Variation . 485

S. Itoh, K. Noguchi, S. Kubota, M. Fujita, Y. Namaditsu and T. Honda
A Numerical Study on von Neumann Reflection of Underwater Shock Wave .................. 491

M.J. Ivanov, V.G. Krupa, R.Z. Nigmatullin and A.P. Tchiaston
CFD Turboengine Simulation ................................................................. 497

P. Jenny, B. Müller and H. Thomann
Correction of Multidimensional Conservative Euler Solvers for Gas Mixtures ............... 503

W. Jia and A. Umemura
General Solution Procedure of Droplet Motion Subject to Surface Tension and Gasification ... 509

B.-N. Jiang
Survey of Recent Advances in the Least-Squares Finite Element Method ..................... 515

Z.L. Jiang, T. Meguro and K. Takayama
Focusing of a Toroidal Shock Wave Emitted from a Co-Axial Annular Shock Tube .......... 519

C. Jianqiang and Z. Hanxin
Third-Order ENN Scheme and Its Applications ........................................... 525

S. Joh and G.H Evans
Gas Mixing in Buoyant Horizontal Flow with Applications to Chemical Vapor Deposition on Moving Fibers .......................................................... 531

K.M. Jones, M. Visai and S. Chandra
Incorporation of Compressibility Effects in the Modeling of High Speed Mixing Layers .... 538

L.D. Jou and S.A. Berger
Numerical Simulation of Flow in the Carotid Bifurcation .................................... 544

A. Jung, R. Merz, J.F. Mayer and H. Stetter
Calculation of Stator/Rotor Interaction in a Transonic Turbine Stage Using Multiple Blade Passages and Time-Inclining for Three-Dimensional Flows ..................... 552

G.A. Kalugin
Numerical Simulation of Compression Plasma Flows of Coaxial Channels ................. 560

O.A. Kandil and M.A. Menzies
Effects of Coupled Rolling and Pitching Oscillations on Transonic Shock-Induced Vortex-Breakdown Flow of a Delta Wing ........................................ 564

S. Kano, S. Yamamoto and H. Daiguji
An Efficient CFD Approach for Simulating Unsteady Hypersonic Shock-Shock Interference Flows ................................................................. 570
V. Karamyshev, V. Kovenya, A. Sleptsov and S. Cherny  
Accelerating Convergence of CFD Iterational Methods ........................................... 576

M. Kawahara and Y. Hayakawa  
Tidal Flow Analysis using Kalman Filter ................................................................. 582

S.N. Kempka, M.W. Glass and J.H. Strickland  
Implementation of Velocity Boundary Conditions in Vorticity Formulations of the Incompressible Navier-Stokes Equations ......................................................... 588

A.S. Kholodov  
Majorant Difference Schemes on Unstructured (Chaotic) Grids for Parabolic Equations .... 594

H.-T. Kim and J.-J. Kim  
A Hybrid Discretization Scheme for Three-Dimensional Incompressible Navier-Stokes Equations at High Reynolds Number ......................................................... 600

D.J. Kinney, M.M. Hafez and P.A. Gelhausen  
Edge Based Preconditioning for the Solution of the Large Linear System of Equations Arising from an Unstructured Full Potential Formulation ........................................... 611

C. Kiris, D. Kwak and R. Benkowski  
Computational Flow Analysis of a Left Ventricular Assist Device ................................ 617

V.P. Korobeinikov and V.V. Markov  
Numerical Modeling of Combustible Dusty Gas Mixture Flow ..................................... 623

Y.S. Kosolapov and A.S. Liberson  
An Implicit Monotone Numerical Method for the Calculation of Three-Dimensional Non-Equilibrium Condensing Flow ................................................................. 632

D.B. Kothe and W.J. Rider  
Practical Considerations for Interface Tracking Methods ............................................ 638

E. Krause, J. Hofhaus and M. Weimer  
Numerical Simulation of Vortex Breakdown - Recent Results ...................................... 644

D.M. Krishna and V. Ganesan  
Three-Dimensional Simulation of Fluid Flow and Fuel Spray in an Internal Combustion Engine Cylinder ................................................................. 653

M. Kurreck and S. Wittig  
Fully Implicit Coupled Solution of the Incompressible Navier-Stokes Equations on Parallel Computing Systems ................................................................. 662

D.A. Lane  
Visualization of Numerical Unsteady Fluid Flows ...................................................... 668

Y. Lee, M. Hafez and M. Hoffman  
Numerical Simulation of Heat Transfer in a Divertor with Non-linear Inner Wall Boundary Conditions ................................................................. 674

R. Lehtimäki  
Advancing Grid Generation for External Configurations ............................................... 682
R.J. LeVeque and Z. Li
Simulation of Bubbles in Creeping Flow Using the Immersed Interface Method .......................... 688

F. Li, W.J. Zhou and Y.Y. Wang
Investigation of Compressible Three Dimensional Flow Over an Oscillating Body ...................... 694

H.-D. Li and Meng-yu Shen
Surface Grid Generation for 3-D Protruding Configuration .................................................. 700

J.-C. Liu, M.S. and L.-Y. Wu
Study of Unsteady Flow About a Circulation Control Airfoil with Periodic Jet Blowing ............. 706

Application of a New Approach - The Space Time Conservation Method to Aeroacoustics
Computation. ......................................................................................................................... 713

R. Lösch and S. Wagner
GridFlex – A Flexible and Fast Mesh-Generation Tool ......................................................... 719

M. Louaked and L. Hanich
A High Resolution Algorithm for the Shallow Water Equations in General Coordinates ............ 725

T. Lund, H.-J. Kaltenbach and K. Akselvoll
On the Behavior of Centered Finite Difference Schemes for Large Eddy Simulation .................. 732

H. Luo, J.D. Baum, R. Löhner and J. Shen
A 3D Numerical Algorithm for Hydrodynamic Free Boundary Problems on Adaptive
Unstructured Grids ..................................................................................................................... 738

H. Luo, J.D. Baum, R. Löhner and J. Shen
Finite Volume Flux-Corrected Transport for Conservation Laws on Unstructured Grids ............ 744

K. Mack, J.D. Bugg and K.S. Rezkallah
Numerical Simulation of a Bubbly Flow Under Reduced Gravity Conditions .......................... 750

A.A. Markov and V.F. Formalev
Numerical Simulation of Anisotropic Heat Conductivity and Conjugated Heat-Transfer for 3-D
Flows ....................................................................................................................................... 756

A. Maruoka, S. Ohta and M. Kawahara
A Finite Element Analysis of Incompressible Flow Using Equal-Order Interpolation ............... 762

D. Mateescu
Time-Accurate Computation of Unsteady Viscous Flows with Oscillating Boundaries ............... 768

D.L. Mathias, K.R. Roth, J.C. Ross, S.E. Rogers and R.M. Cummings
Computational Investigation of a Semi-Span Flap ..................................................................... 776

K. Matsuno
Vertex-Centered Finite Volume Method for Two-Dimensional Compressible Flows .................... 782

K. Matsuno, M. Yamakawa and N. Satofuka
Overset Adaptive-Grid Method with Applications to Compressible Flows ............................... 788
