TABLE OF CONTENTS

Volume 1

Introduction

*Nusselt-Reynolds Prize Lectures*
Wisps in the pipe: annular flow at high mass fluxes
G.F. Hewitt .......................................................... 3

Unsteady two-phase flows and engine performance
J.H. Whitelaw ......................................................... 15

Part 1

*Measuring techniques*

*Keynote Lecture*
Infrared thermography and convective heat transfer
G.M. Carlomagno ...................................................... 29

*Session 4: Velocity*

Fluid flow measurement and free surface movement using particle image velocimetry
Y.A. Hassan, O.G. Philip ........................................... 43

Measurement of flow field around a solid particle using photochromic dye
S. Hosokawa, A. Tomiyama, S. Mizushima, T. Sakaguchi ........................................... 51

Development of thermo-graphy system for velocity measurement
Y. Hasegawa, K. Kikuyama, E. Asakura, K. Kawaguchi ........................................... 59

LDA-analysis of the flow pattern around an array of cubical protrusions in low Reynolds number turbulent channel flow
E.R. Meinders, J.B. Campen, K. Hanjalić, T.H. van der Meer ........................................... 67

High-quality measurement technique for aerodynamic characteristics of turbine blade profiles
W. Rieß, Ch. Jetter ........................................................ 75

*Session 10: Temperature and concentration*

*Invited Lecture*
Transient conduction in two-dimensional two-component composite systems
GP. Peterson, X.F. Peng ........................................... 85

New experimental technique for enhancement of spatial resolution in heat transfer measurements
A.I. Iliynsky, S. Rainieri, A. Farina, G. Pagliarini ........................................... 93

Experimental validation of an extended flash method for thermal diffusivity determination of high-temperature materials
F. Shen, J.M. Khodadadi, F. Kacička ........................................... 101

Optical scanning technology for nondestructive contactless measurements of thermal conductivity and diffusivity of solid matters
I.A. Popov .......................................................... 109
Local heat transfer on complex surfaces using thermochromic liquid crystals
M.K. Evans, C.W. Rapley, D. Wilcock ................................................................. 117

Effects of temperature gradient and measuring angle on the relationship between color
and temperature in liquid crystal
K. Ichimiya, N. Akino, T. Kunugi ........................................................................ 125

Measurement of the effective thermal conductivity of a Mg-MgH$_2$ packed bed
with oscillating heating
J. Kapischke, J. Hapke ...................................................................................... 133

Application of infrared thermography modeling local convective heat transfer coefficient
adiabatic effectiveness on multi-hole cooling in real cases
J.M. Emidio, B. Leger, P. André, G. Grienche, G. Schott ..................................... 141

Calibration of a temperature sensor using a computerized data acquisition system
R.C. Prasad, I.M. Webb ...................................................................................... 153

Interferometric study of three dimensional temperature field in a differentially heated
horizontal fluid layer
D. Mishra, K. Muralidhar, P. Munshi ..................................................................... 161

Noncontact measurement of internal temperature distribution in a solid material
using ultrasonic computed tomography
M. Fuji, X. Zhang .............................................................................................. 169

Further application of laser holographic interferometric temperature measurement
to low density environments
N. Maruyama, S. Kato ....................................................................................... 177

Determination of thermal contact conductance by optional heat supply
Y. Iida, T. Kanesaki, M. Kondou, H. Watanabe ..................................................... 185

Temperature oscillation thermography as a measurement technique in heat transfer
W. Roetzel, M. Wandelt .................................................................................... 193

Temperature measurements in a free convection boundary layer using coherent
anti-Stokes Raman spectroscopy (CARS)
S.P. Kearney, R.E. Foglesong, R.P. Lucht, A.M. Jacobi ..................................... 201

The testing station with changeable orientation of the University of Calabria
M. Cucumo, D. Kaliakatsos, V. Marinelli ........................................................... 209

Measurement of moisture content of an artificial soil using time domain reflectometry

Measurement of diffusion fields of solutions using real-time phase shift interferometer
and rapid heat-transfer control system
S. Maruyama, T. Shibata, K. Tsukamoto ............................................................. 225

Development of a scanning laser-induced fluorescence technique for the three-dimensional
measurement of an unsteady scalar field
K. Sato, N. Kasagi ............................................................................................. 233

Getting knowledge about soot agglomerate structure from light scattering measurements
S. di Stasio, J. D’Alessio, M. Lazzaro, P. Massoli .............................................. 241

Thermal radiation characteristics of polydispersions and experimental methods for
determination of size and concentration of particles in flow
S.P. Rusin, E.D. Sergievskii ................................................................................. 249

Measuring extreme values of thermal conductivity with low cost compact devices
M. Haim, Y. Barnea, I. Gilad, I. Shai, M. Szanto ............................................ 253
Session 23: Void fraction

Invited Lecture
X-ray tomography for two-phase flow in random and structured packings
N. Reinecke, D. Schmitz, D. Mewes ................................................................. 261

Non-invasive measurements of void-fraction profiles in a vertical mercury-nitrogen flow

Statistical parameter characteristics of void fraction fluctuations and gas-phase structures in horizontal gas-liquid intermittent flow
G. Matsui, H. Monji, M. Takaguchi, Y. Miura......................................................... 277

Modelling of non-ideal effects of gamma densitometers
H. Linga ........................................................................................................... 285

Application of a low-cost true-monofiber local phase detection probe to void fraction measurements in pool boiling
P.M. Carrica, V. Masson, P. Di Marco ........................................................................ 293

A real-time neutron radiography diagnostic of a vertical co-current two-phase flow channel with a hexagonal finned bundle
G.D. Harvel, J.S. Chang, V.S. Krishnan ...................................................................... 301

Gamma and X-radiation probes for multiphase systems

Part 2
Industrial applications

Session 9: Industrial applications of heat and mass transfer in the process industries

Invited Lecture
A heat transfer approach to precision polymer molding process: injection molding process assisted by infrared irradiation
Y. Kurosaki, I. Satoh .................................................................................................. 319

A fundamental investigation of effects of squeezing process on drying moist fiber-porous materials
K. Kishinami, J. Suzuki, H. Saito, K. Yamazaki ................................................................ 327

Investigation of the heat - and mass transfer at convective drying of capillary porous materials in a stationary layer
S.P. Rudobashta, A.G. Zlobin .................................................................................... 335

Session 14: Industrial applications in heat transfer

Heat transfer from a surface of a HTSC-sample in liquid nitrogen
V.I. Deev, V.S. Kharitonov, K.V. Kutsenko, A.A. Lavrukhin, A.O. Komarov, S.V. Voronkov .... 343

Thermal contact conductance between metal surfaces for induction motor cooling
K. Takahashi, H. Kuwahara, N. Kawasaki, T. Obata, E. Sugawa .................................... 349

Temperature effect on heat transfer properties of insulating materials
M. Campanale, F. De Ponte, L. Moro ............................................................................ 357
Influence of leakage distribution on the thermal performance of a rotary regenerator
R.K. Shah, T. Skiepko

Measurement of volumetric heat transfer coefficients in cellular ceramics
X. Fu, R. Viskanta, J.P. Gore

Prediction of heat transfer in engine cooling systems
S. Bhowmick, C. Branchi, E.V. McAssey, Jr., M. Gollin, G. Cozzone

Measurement of convective heat transfer coefficients in brick packings by the periodic method
P. Lybaert, E. Tassignon, H. Meunier

Experimental and theoretical investigation of thermomechanical ablation processes of multiphase materials under high enthalpy heat flux effects
Yu.I. Dimitrienko

Radiative properties of highly porous thermal insulation of metal coated microfibers: comparison of calculations with the experimental data
L.A. Dombrovsky

Session 16: Industrial applications of heat transfer in energy systems

Invited Lecture
Current status of research on functionally thermal fluid - new challenge in advanced thermal energy storage and thermal energy transportation
H. Inaba

Short-term performance of a built-in-storage solar water heater
I. Necmi Kaptan, A. Kiliç

Transport phenomena of thermal energy storage capsules in a pipe flow
H. Inaba, A. Horibe, S. Seto

Session 26: Industrial applications in fluid flow

Exergy degradation and system evolution in the light of non-equilibrium thermodynamics with particular reference to Rayleigh-Bénard phenomena
G. Bisio

Thermodynamic researches of energy systems based on the new information technologies
R.R. Nazyrova

Numerical modeling of grinding rate in granular flow of brittle material
Y. Kitamura, M. Ogawa, H. Tsuge, T. Furuhata, T. Miura

Modeling of a gas-liquid phase-change micro-actuator
S. Kato

Fractal prediction and result discussion of reservoir permeability distribution
N.S. Zhang, J.X. Yun

Non steady-state behaviour of the flow in agitated vessels
J.H.A. Schoenmakers, J.G. Wijers, D. Thoenes

Studies on power requirement and mixing efficiency for modified Rushton turbine stirrer
L. Broniarz-Press, J. Borowski, S. Koper
Part 3

Thermodynamics

Session 19: Thermodynamic states

Invited Lecture

Measurement and correlation of supercritical fluid-phase equilibria of \(\text{CO}_2\)-alcohol systems utilizing static apparatus
C.S. Lee, J.H. Ryu, K.P. Yoo ................................................................. 493

New applications of the ERAS-model: excess volumes of binary liquid mixtures of 1-alkanols with acetonitrile
C.G. Pina, A.Z. Francesconi ................................................................. 501

Thermal properties of binary systems \(\text{Al}_2\text{O}_3\)-\(\text{R}_2\text{O}_3\) in the liquid state (R - lanthanoid)
S.V. Stankus, R.A. Khairulin, P.V. Tyagel’sky ......................................... 507

Measurement of the pressure-composition isotherms of high-temperature and low-temperature metal hydrides
J. Kapischke, J. Hapke ................................................................. 511

The method of numerical and experimental investigation of the metal alloys thermophysical properties
E.S. Mukhtarov, B.I. Nigmatulin, T.E. Zavialova, N.G. Rassokhin, V.S. Granovsky .......... 519

Experimental measurements of vapor-liquid equilibria for systems containing CFC and halon alternatives
J.S. Lim, B.C. Lee, J.D. Kim, Y.W. Lee, Y.Y. Lee ................................................................. 525

The vapour pressure of \(\text{CH}_3\text{F}+\text{CF}_4\) at 130.46 K
I.M.A. Fonseca, G.G. Sardinha, L.Q. Lobo ................................................................. 533

Thermodynamic properties of some quaziazeotrop mixtures and cooling cycles used the blends
A.V. Dobrokhotov, E.E. Ustjuzhanin, V.V. Altunin, A.A. Alexandrov, B.F. Reutov,
A.G. Testov ........................................................................ 537

An empirical equation of state and thermodynamic properties of HFC 134a
A.V. Dobrokhotov, A.V. Maslennikov, E.E. Ustjuzhanin, N.A. Utenkova .......... 541

Mixing properties of acetone-methanol-n-octane at 298.15 K
M. Iglesias, B. Orge, A. Dominguez, J.Tojo ................................................................. 545

Methods of measuring solid, dry, paste materials and liquids thermophysical properties
S.V. Ponomarev, S.V. Mischenko, A.G. Divin, S.V. Grigorieva, E.S. Mischenko,
E.S. Ponomareva ........................................................................ 553

Experimental research of thermophysical and kinetic properties of composites during cure
O.S. Dimitriev, S.V. Mischenko, A.V. Shapovalov, I.S. Kasatonov ......................... 559

Physical properties for water and steam calculated by means of empirical correlations.
Correlations also for FREON 11 and 12
J. Flinta ........................................................................ 565
