Volume 4

1997
Edizioni ETS
PISA
Turbulent opposed jet
N. Ogawa, K. Yasuhara, D. Shinohira

Study on impingement heat transfer with non-circular jets using infrared imaging method
K. Oyakawa, S. Matsuda, M. Yaga

Effect of external disturbances on the impinging jet structure
S.V. Alekseenko, D.M. Markovich, V.I. Semenov

Stability studies of a liquid jet flowing on a curved surface
K. Gulec, A.E. Ruggles, J.R. Haines

Investigation of local characteristics in the complex jet systems
B.M. Galitseiski, A.A. Nozdreen, M.V. Solntsev

Volume 4

Part 6

Heat transfer
including the Symposium on combustion in engines and industrial systems

Keynote lectures

Experimental investigation of temperature fields on smooth and rough walls in a turbulent boundary layer
G. Hetsroni, A. Mosyak, R. Rozenblit, L.P. Yarin, G. Ziskind

Experimental methods for characterizing transport phenomena occurring during solidification of multiconstituent materials
F.P. Incropera

Self-propagating high-temperature synthesis of refractory materials: theory and applications
A.G. Merzhanov

Measurement techniques in fluidized beds
J. Werther

Session 2: Heat transfer enhancement

Invited Lecture

Heat transfer enhancement. The encouragement and accommodation of high heat fluxes
A.E. Bergles

Prediction of flow resistance and heat transfer rates at heating fluids in tubes equipped with perforated baffles
I. Ziolkowska, B. Flejter, D. Ziolkowski

EHD enhanced heat transfer in the evaporator of a refrigeration plant
R.K. Al-Dadah, I. Chaer, T.G. Karayiannis

Evaporative heat transfer enhancement by spontaneous vapor bubble behaviors along the heated surface
K. Kadoguchi, T. Yamamoto, M. Tashiro

Swirling flow heat transfer in a divergent pipe
C. Gau, H.R. Chen
Heat transfer augmentation by secondary flow generated in static mixer tubes
J. Németh .......................................................... 1957

Mass transfer characteristics in a grooved channel for self-sustained oscillatory flow
T. Nishimura, K. Kunitsugu, H. Nakagiri .......................................................... 1963

Flat-plate heat transfer enhancement using a hemispherical protuberance
M.C. Gentry, A.M. Jacobi .......................................................... 1971

Efficiency criterion for comparison of the heat transfer and friction characteristics of channels with different helical swirlers

Session 5: Solidification

Solidification characteristics along a horizontal cooled plate with separation region
M. Yamada, S. Fukusako, T. Kawanami, M. Kurita, C. Oh .................................. 1985

Heat transfer measurements of ice slurry in tube flow
C.W. Snoek, J. Bellamy .......................................................... 1993

Microscopic observations of intracellular ice formation and dehydration in onion cells
T. Tsuruta, T. Kawamizu, I. Nonaka, T. Masuoka ........................................ 1999

Thermophysical measurements on the basic parametric frequency shear effects
V. Krylovich, A. Shashkov .......................................................... 2007

Session 6: Radiation

Invited Lecture
Radiation properties of solid surfaces: experimental and theoretical emittances
C. Pisoni .......................................................... 2011

Experimental study of the performance of a water spray curtain to attenuate thermal radiation
H. Prétrel, J.M. Buchlin .......................................................... 2019

Laser pulse heating of metal surface in water
I. Ueno, M. Inoue, M. Shoji .......................................................... 2027

Experimental verification of a theory for the radiative properties of high-porosity fibrous media
G.R. Cunnington, S.C. Lee .......................................................... 2035

Numerical analysis and its experimental verification on radiative energy transmission through fibrous layer with large size parameters
K. Kudo, B.X. Li, A. Kuroda .......................................................... 2043

Session 11: Heat exchangers

Invited Lecture
Vaporization in compact heat exchangers

Hydrodynamics and transfer processes in energy saving cascade columns
L. Broniarz-Press, W. Ziolkowski .......................................................... 2063
Fundamental heat transfer characteristics of a direct contact heat exchanger between melting alloy and water
I. Kinoshita, Y. Nishi, M. Furuya ................................................................. 2071

Fouling effect of geothermal water scale on heat transfer around a tube in a bank
M.S. Kim, T. Ota ............................................................... 2079

Preventing biofouling in heat exchangers: an experimental assessment of the effects of water velocity and inorganic particles on deposit detachment
M.J. Vieira, L.F. Melo ................................................................. 2087

The heat transfer under the cellular foam cross-flow
J. Gylys, E. Bubelis ................................................................. 2093

Impingement heat transfer at an array of circular cylinders
C. Bartoli, S. Faggiani ................................................................. 2101

Heat transfer through vertical annulus with stagnant water
J. Dekeyser, V. Sobolev, M. Decreton ................................................................. 2107

Local measurements of fluctuating heat transfer for a staggered tube array
J.W. Scholten, D.B. Murray ................................................................. 2115

Turbulent flow structure in helical oval and spiral-finned rod bundles and its effect on interchannel mixing of heat carrier
B.V. Dzyubenko, G.A. Dreitser ................................................................. 2123

Session 21: Convective flows

Thermal instabilities in a mixed convection phenomenon: description and analysis
C. Abid, F. Papini ................................................................. 2131

Effects of double diffusion on a convective process near thermodynamic critical point
Yu.G. Leonenko ................................................................. 2137

Experimental studies on gas-injected finger convection in a hele-shaw cell
E.S. Cho, D.Y. Yoon, C.K. Choi, I.G. Hwang ................................................................. 2143

Convection heat transfer on horizontal isothermal heated rotating disk
K. Hirose, T. Yokoyama, S. Hara, M. Ouchi ................................................................. 2151

Comparison of the structure of the near wall convective layer in turbulent free convection flows formed over horizontal and vertical heated plane surfaces
D.D. Papailiou ................................................................. 2159

Experimental and numerical studies of natural convection heat transfer in vertical converging channel flows
J.S. Shalash, J.D. Tarasuk, D. Naylor ................................................................. 2167

An interferometric study of the effect of louvers on free convection from a vertical surface
A.D. Machin, D. Naylor, S.J. Harrison, P.H. Oosthuizen ................................................................. 2175

Effect of heat flux distribution of vertical walls on natural convection in rectangular enclosure
Y. Kikuchi, M. Kano, M. Sako ................................................................. 2183

The steady-state, transient and stability behavior of a rectangular natural convection loop. Experiments and one-dimensional model
F. Suda ................................................................. 2191
Transposition of basic phenomenology in single-phase natural circulation  
M. Frogheri, M. Misale, F. D’Auria .................................................. 2199

Heat transfer for forced transient flow in a circular tube  
T. Kujawa, W. Nowak ................................................................. 2209

Experimental investigation of mixed-convection turbulent transport in a vertical tube  
P. Poškas, J. Vilemas, R. Pabarčius ........................................... 2213

Unsteady natural convection in horizontal cylindrical annuli  
G. Labonia, G. Guj, R. Camussi, F. Stella ................................... 2219

Steady state boiling heat transfer from inclined surfaces to methanol  
W. Hendradjit, K.J. Ahn, G.F. Naterer, J.E.S. Venart ..................... 2227

Heat transfer characteristics in helical coil tubes  

Experimental holographic investigation of natural convection from horizontal cylinders enclosed in a rectangular cavity  
G. Cesini, M. Paroncini, R. Ricci ................................................. 2241

Flow visualization of natural convection between horizontal heated parallel plates  
O. Manca, B. Morrone, S. Nardini ............................................... 2251

Radiation effect on natural convection in symmetrically heated vertical channels with discrete sources  
O. Manca, S. Nardini, V. Naso .................................................... 2259

Temperature distribution in low turbulent natural convection in a square cavity  
Y.S. Tian, T.G. Karayannis, J.X. Wen, R.D. Matthews ..................... 2267

Session 25: Fluidized beds, packed beds and porous media

Study on the ability of heat transfer between two nonisothermal regions in a region-divided fluidized bed  
D. Cang, H.Y. Chen ................................................................. 2275

A capacitance measurement system for local solids volume concentrations and solids velocities in large-scale fluidized bed combustors  
B. Hage, J. Werther ................................................................. 2281

Effect of solid behaviour on heat transfer at a horizontal cylindrical surface in a circulating fluidized bed  
J. Katayama, S. Takashima, E. Obata, H. Takahashi ....................... 2289

Experimental study of gas-solid heat transfer in a centrifugal fluidized bed  
Y.L. Hao, M.H. Shi ................................................................. 2297

Short contact time circulating fluidized bed  
A. Tinaburri ................................................................................ 2303

A study on the particle flow characteristics in a circulating fluidized bed using image analysis of spatial filtering method  
Y. Katoh, H. Nakagawa, M. Miyamoto ........................................ 2309

Radiotracer methods for studying solid(s) transport in gas fluidized beds  
Z.I. Kolar ............................................................................... 2317
A semi-emperical correlation for heat transfer coefficients between dense gas-solid quiescent fluidized beds and surfaces
K.R. Sharma

Heat transfer and reaction characteristics in a catalyst-packed bed of a CO shift converter
K. Kawamoto, K. Murata, R. Kubo

Heat transfer and hydraulic drag in channels with packed beds
A.V. Gorin, R.A. Dekhtyar, V.A. Mukhin, E.N. Salomatinn

Transient characteristics of heat and mass transfer in a reforming catalyst bed
Y. Usami, S. Fukusako, M. Yamada, T. Kawanami

Dynamics of reacting and unconsolidated fixed bed
F. Mijangos, F. Varona, J.I. Lombraña, M. Díaz

Two-phase co-current upflow and heat transfer in packed bed
V.V. Kuznetsov, S.Yu. Saltanov

Multiphase flows in porous media: mathematical model and microgravity experiments

Experimental analysis of unsteady heat and moisture transfer around a heated cylinder buried into a porous medium
R.E.S. Moya, A.T. Prata, J.A.B. Cunha Neto

Flows of Bingham liquids through ideal porous media: an experimental and theoretical study
P.R. Souza Mendes, M.F. Naccache, C.V.M. Braga, A.O. Nieckele, L.F.A. Azevedo, R.L.A. Santos

The non-linearity of the pseudo homogeneous model for the heat transfer in fixed beds
J.C. Thomeo, J.T. Freire

Velocity fluctuations of granular materials in a shear cell
S.S. Hsiau, H.W. Jang

A phenomenologic study of multiphase fluid flow through water saturated Boom clay
L. Ortiz, G. Volckaert, M. Impey, S. Einchcomb

Measurements of gas-liquid interface shape in the vicinity of a contact line for capillary flow using interferometer
N. Ichikawa, K. Takata, M. Misawa

Experimental study of flow through micro-passages
S.R. Kendall, H.V. Rao

Micromechanics of multiphase polydisperse media
V.V. Dubrovsky, A.M. Podvysotsky, A.A. Shraiber, V.P. Yatsenko

Experimental studies of hydrodynamics and heat exchange in channels with high-porous cellular materials in forced convection of single-phase and boiling working fluids
Yu.F. Gortyshov, I.A. Popov

Session 28: Refrigeration and cooling

Film cooling heat transfer behaviour on curved surfaces
S. Vijayasree, R.P. Vedula
