CONFERENCE PROCEEDINGS
VOLUME I

13th Annual Review of Progress in
APPLIED
COMPUTATIONAL
ELECTROMAGNETICS

at the
Naval Postgraduate School
Monterey, CA
March 17-21, 1997

TECHNICAL PROGRAM CHAIRMAN
Eric C. Michielssen

Sponsored by
The Applied Computational Electromagnetics Society
Naval Postgraduate School, DOE/LLNL, University of Illinois, University of Kentucky,
USAF, DOD AND DOE IN COOPERATION WITH IEEE, URSI, ASEE, SIAM AND AMTA

THE NAVAL POSTGRADUATE SCHOOL
SESSION 1: VISUALIZATION
Chair: Janice L. Karty

"Visualization: A Powerful Tool For Understanding Electromagnetics"
E.K. Miller .......................... 2

"Computational Diagnostic Techniques for Electromagnetic Scattering:
Analytical Imaging, Near Fields, and Surface Currents"
K.W. Horn, N.A. Talcott, Jr. and J. Shaeffer .......................... 8

"Interferometric 3D Imaging", C.A. Au ................................... 15

"Modern Graphics Applications for Visualization of Electromagnetic
Radiation and Scattering"
C.L. Yu, R. Kipp, D.J. Andersh and S.W. Lee .......................... 20

"A Versatile Geometry Tool for Computational Electromagnetics (CEM): MrPatches"
D.D. Car and J.M. Roedder ........................................... 27

"Visualisation Issues for Time Domain Integral Equation Modelling"
S.J. Dodson and S.P. Walker ........................................... 34

"An Antenna Training Aid Using Electromagnetic Visualisation"
A. Nott and D. Singh ................................................. 41

"The Fieldinspector: A Graphic Field Representation System"
P. Leuchtmann and A. Witzig ........................................... 49

"A Data Compression Technique for Antenna Pattern Storage and Retrieval"
A. Nott ......................................................... 55

SESSION 2: ADVANCED TIME-DOMAIN METHODS
Chair: Steve Gedney

"Solution of Boundary Value Problems in Time Domain Using Multiresolution Analysis"
L.P.B. Katehi and J. Harvey ........................................... 64

"High Resolution Schemes for Maxwell Equations in the Time Domain"
J.S. Shang ...................................................... 74
SESSION 2: 

"FDID M24 Dispersion and Stability in Three Dimensions"
G. Haussmann and M. Pikel-May ................................................................. 82

"Transparent Absorbing Boundary (TAB): Truncation of Computational Domain without Reflections", J. Peng and C.A. Balanis ......................................................... 90

"The Design of Maxwellian Smart Skins", R.W. Ziolkowski and F. Auzanneau ............... 98

"Numerical Analysis of Periodic Structures Using the Split-Field Update Algorithm"

"Modeling Dispersive Soil for FDID Computation by Fitting Conductivity Parameters"
C.M. Rappaport and S.C. Winton ............................................................... 112

"A Hybrid Analysis Using FDID and FETD for Locally Arbitrarily Shaped Structures"
D. Koh, H-B. Lee, B. Houshmand and T. Itoh ............................................... 119

"A Simple Method for Distributed Parallel Processing with a Cartesian Coordinate System Based Finite-Difference Time-Domain Code"
E.A. Baca, J.T. MacGillivray, D. Dietz, S.A. Blocher and C.E. Davis ..................... 125

SESSION 3: MODEL REDUCTION METHODS FOR COMPUTATIONAL ELECTROMAGNETICS 
Chairs: Jin-Fa Lee, and Din-Kow Sun

"Computation of Transient Electromagnetic Wavefields in Inhomogeneous Media Using A Modified Lanczos Algorithm", R.F. Remis and P.M. van den Berg ......................... 132

"S-Parameters of Microwave Resonators Computed by Direct Frequency and Modal Frequency Finite Element Analysis", J. Brauer and A. Frenkel ......................................... 140

"Reduced-Order Modeling of Electromagnetic Systems with Pade Via Lanczos Approximations", A.C. Cangellaris and L. Zhao ....................................................... 148

"Integrating Data Obtained From Electromagnetic Field Analysis into Circuit Simulations"
W.T. Beyene and J.E. Schutt-Aine ..................................................................... 156

"Solution of EM Problems Using Reduced-Order Models by Complex Frequency Hopping"
M.A. Kolbedhari, M. Nakhia, R. Achar and M. Srinivasan .................................. 165

"Transient Analysis via Electromagnetic Fast-Sweep Methods and Circuit Models"
J.E. Bracken and Z.J. Cendes ........................................................................... 172

SESSION 4: COMPUTER SIMULATION OF ANTENNAS 
Chairs: Boris Tomasic and Randy Haupt

"Application of Computational Electromagnetics to Shipboard HFDF System Simulation"
J.B. Knorr ........................................................................................................ 182

"Calculation of the Near Fields of a Large Complex Antenna Structure and Comparison with In Situ Measurements", C. Selcher, E. Kennedy and P. Elliot ............................................ 193
SESSION 4: continued

"Theoretical Studies on the Effect of Waveguide Geometry on the Radiating Slot"
V.V.S. Prakash, N. Balakrishnan and S. Christopher ................................. 201

"Computed and Measured Radiation Patterns of Antennas with Aerodynamic Radomes"
D.C. Jenn and S. Herzog ........................................................................... 208

"SAF Analysis Codes for Computing Shipboard Antenna Pattern Performance, Antenna Coupling, and RADHAZ", B.J. Cown and J.P. Estrada .................................................. 214

"Far Field Patterns of Combined TE/TM Aperture Distributions"
R.A. Speciale ......................................................................................... 222

"Calculation of Equivalent Generator Voltage and Generator Internal Impedance for Cylindrical Antennas in the Receiving Mode", C.-C. Su ........................................................................ 223

"Arrays of Sleeved Monopoles - Computer Code"
B. Tomasic, E. Cohen, K. Sivaprasad ......................................................... 231

SESSION 5: RADIATION PHYSICS
Chairs: Ed Miller and Bob Bevensee

"An Exploration of Radiation Physics in Electromagnetics", E.K. Miller ................................................. 240

"Formulae for Total Energy and Time-Average Power Radiated from Charge-Current Distributions", B. Bevensee ......................................................................... 248

SESSION 6: COMPUTATIONAL METHODS FOR INVERSE SCATTERING
Chairs: Bill Weedon and Gregory Newman

"Application of Kaczmarz’s Method to Nonlinear Inverse Scattering"
W.H. Weedon .......................................................... 264

"Statistical Characteristics of Reflection and Scattering of Electromagnetic Radar Pulses by Rough Surface and Buried Objects"
Y. Miyazaki, K. Takahashi and S. Knedlik .................................................. 268

R.K. Murphy, H.A. Sabbagh, A. Chan and E.H. Sabbagh ................................................. 276

SESSION 7: WAVELETS AND FRACTALS
Chairs: Randy Haupt and Doug Werner

"Application of Coifman Wavelets to the Solution of Integral Equations"
M. Toupikov and G. Pan .......................................................... 284

"Fast Array Factor Calculations for Fractal Arrays" R.L. Haupt and D.H. Werner ................................................. 291
SESSION 7: continued

"NEC2 Modeling of Fractal-Element Antenna (FEA's)"
N. Cohen ................................................................. 297

"Genetic Antenna Optimization with Fractal Chromosomes"
N. Cohen ................................................................. 305

SESSION 8: FDTD AND FVTD I
Chair: Melinda Picket-May

"An FDTD/FVTD 2D-Algorithm to Solve Maxwell's Equations for a Thinly Coated Cylinder"
J.S. Chen and K.S. Yee ............................................. 312

"Improved Computational Efficiency by Using Sub-Regions in FDTD Simulations"
E.A. Jones and W.T. Joines ........................................ 322

"PML-FDTD Simulation for Dispersive, Inhomogeneous, and Conductive Earth"
W.C. Chew, M. Oristaglio and T. Wang .......................... 335

"Study of Absorbing Boundary Conditions in the Context of the Hybrid Ray-FDTD Moving Window Solution"
Y. Pemper, B. Fidel, E. Heyman, R. Kastner and R.W. Ziolkowski ............... 343

SESSION 9A: FDTD AND FVTD II

"A Generalized Finite-Volume Time-Domain Algorithm for a Microwave Heating Problem on Arbitrary Irregular Grids", H. Zhao and I. Turner ......................... 352

"A Parallel FVTD Maxwell Solver Using 3D Unstructured Meshes"
J.-P. Cioni, L. Fezoui, L. Anne and F. Poupaud .................. 359

"Application of a Finite-Volume Time-Domain Technique to Three-Dimensional Objects"
F.G. Harmon and A.J. Terzuoli, Jr. .............................. 374

"Comparison of Equations for the FDTD Solution in Anisotropic and Dispersive Media"
G.J. Burke and D.J. Steich ....................................... 382

"A Near-Field to Near-Field Transformation for Steady-State FDTD"
K.A. Lysiak and D.H. Werner ..................................... 390

SESSION 9B: INTEGRATED CIRCUITS AND PHOTONICS

"Transient Simulation of Breakdown Characteristics of a Miniaturized MOSFET Based on a Non-Isothermal Non-Equilibrium Transport Model"
W.-C. Choi, H. Kawashima and R. Dang .......................... 398
SESSION 9B: continued

"Numerical Simulation of Electro-thermal Characteristics of Semiconductor Devices
Taking Account of Chip Self-heating and In-chip Thermal Interdependence"
H. Kawashima, C. Mogilestue, M. Schlectweg and R. Dang.......................... 404

"Applications of Photonic Band Gap Materials"
M.M. Sigalas, R. Biswas, K.M. Ho, W. Leung, G. Tuttle and D. Crouch......... 412

SESSION 9C: SIGNAL PROCESSING TECHNIQUES FOR CEM

"Investigating the Use of Model-Based Parameter Estimation for Electromagnetic-Data
Phase Recovery", E.K. Miller ...................................................... 418

"Real-Time Adaptive Forward Error Correction Scheme", S. Veluswamy ......... 420

"A Novel Spatial Modulation Spread-Spectrum Technique"

"Time-Frequency and Time-Scale Analysis for Electromagnetics - Spectrograms,
Wavelets and More", C.J. McCormack ........................................ 432

SESSION 9D: ANTENNA APPLICATIONS

"Antenna Array Factors for Dipole Antennas Above an Imperfectly Conducting
Half-Space", J.W. Williams ....................................................... 439

"Energy Transfer from Free Space Transient Waveforms Through HF Antennas to
Arbitrary Loads", M.J. Packer .................................................... 449

"A 12 Beam Cylindrical Array Antenna for AMPS and PCS Applications"
G.A. Martek and J.T. Elson ..................................................... 457

"A Hybrid-Method Synthesis of a Radiometric Antenna for Near-Field Sensing"
E. Di Giampaolo and F. Bardati .................................................. 466

"An Evaluation of Software Packages Based on Moment Methods for TV Antenna
Design", I.F. Anitzine, C. Jaureguibeitia and J.A. Romo .......................... 473

SESSION 9E: SCATTERING AND DIFFRACTION

"Algorithm for Prediction of Scattering from Thin Cylindrical Conductors Using Field
Decomposition", P.K. Bishop, J.R. James and R.T. Biggs ........................ 481

"Numerically Exact Algorithm for the H and E-Wave Scattering from a Resistive Flat-Strip
Periodic Grating", T.L. Zinenko, A.I. Nosich, Y. Okuno and A. Matsushima .... 489

SESSION 9F: NUMERICAL METHODS

"Numerical Convergence and Richardson Extrapolation", R.C. Booton, Jr. ...... 495

"Powerful Recursive Algorithm for the Exhaustive Resolution of a Nonlinear
Eigenvalue Problem", Ph. Riondet, D. Bajon and H. Baudrand .................. 502
SESSION 9F: continued

"A Dense Out-of-Core Solver for Workstation Environments"
C.E. Lee and R.M. Zazworsky ................................................................. 509

"Mathematical Representation of Multiport Resonator Test Data", R.A. Speciale .......... 516

SESSION 9G: SIMULATION

"A Comparison of Analytical and Numerical Solutions for Induction in a Sphere with
Equatorially Varying Conductivity by Low-Frequency Uniform Magnetic Fields of
Arbitrary Orientation", T.W. Dawson and M.A. Stuchly .................................. 533

"Modeling of Laminated Cores by Homogeneous Anisotropic Cores for Magnetics
Simulation", J.E. Kiwitt, A. Dietermann and K. Reiss ................................... 541

"Barring Characteristic of an Ion Shutter", B.M. Cramer and D.A. Mlynski ............... 547

"Stability Analysis of Re-Entrant Multi-Turn Toroidal/Helical Electron Orbits in Strong
Focusing Alternating-Gradient Magnetic Fields", R.A. Speciale ............................ 554

SESSION 10: FINITE ELEMENT ANALYSIS

Chairs: John Brauer and Zoltan Cendes

"Finite-Element and Method-of-Moments Analyses of an Ultrawide-Bandwidth
T. Horn", M.H. Vogel .................................................................................. 558

"A Modified Mei Method for Solving Scattering Problems with the Finite Element
Method", Y. Li and Z.J. Cendes .................................................................... 566

"Investigation of the Limitations of Perfectly-Matched Absorber Boundaries in Antenna
Applications", J.F. DeFord ........................................................................... 592

"The Spectral Lanczos Decomposition Method for Solving Axisymmetric Low-Frequency
Electromagnetic Diffusion by the Finite-Element Method"
M. Zunoubi, J.-M. Jin, W.C. Chew and D. Kennedy ........................................ 598

"Duality Between Finite Elements and Hodge Operator in Three Dimensions"
A. de La Bourdonnaye, and S. Lala .................................................................. 606

"A Generalized Method for Including Two Port Networks in Microwave Circuits Using

"Projecting Between Complementary Vector Basis Functions"
J.S. Savage and A.F. Peterson ....................................................................... 620

SESSION 11: ADVANCES IN TRANSMISSION LINE MATRIX (TLM) MODELING I

Chairs: Wolfgang Hoefer and Fred German

"Modelling of Ferrite Tiles as Frequency Dependent Boundaries in General Time-Domain
TLM Schemes", V. Trenkic, J. Paul, I. Argyri and C. Christopoulos ........................ 630

"The Use of Sources for TLM Modeling of Complex Materials"
J. Represa, A.C.L. Cabecceira and I. Barba .................................................. 638

"Electromagnetic Fields Generated by Current Transients on Protection Structures Using
TLM - A FDTD Comparison", G.P. Caixeta and J. Pissolato .............................. 649
SESSION 11: continued

"Towards a TLM Description of an Open-Boundary Condition"
D. de Cogan and Z. Chen ........................................... 655

"Electromagnetic Field Computations by a Generalized Network Formulation"
L.B. Felsen, M. Mongiardo and P. Russer ........................................... 666

"A Comparative Study of Dispersion Errors and Performance of Absorbing Boundary Conditions in SCN-TLM and FDTD"
L. DeMenezes, C. Eswarappa, and W.J.R. Hoefer ........................................... 673

"Analysis of Planar Structure on General Anisotropic Material: Unified TLM Model in Frequency-and Time-domain and Experimental Verification"
K. Wu, Q. Zhang and J. Huang ........................................... 679

SESSION 12: HYBRID TECHNIQUES FOR LARGE BODY PROBLEMS
Chairs: Donald Pflug and Robert Burkholder

"Hybrid MoM/SBR Method to Compute Scattering from a Slot Array Antenna in a Complex Geometry", A.D. Greenwood and J. Jin ........................................... 696

"Use of Near-Field Predictions in the Hybrid Approach"
J.L. Karty, J.M. Putnam, J.M. Roedder and C.L. Yu ........................................... 705

"A Hybrid Surface Integral Equation and Partial Differential Equation Method"
J.M. Putnam, M.R. Axe and D.S. Wang ........................................... 713

"Improved Hybrid Finite Element-Integral Equation Methods"
S. Bindiganavale, J. Gong, Y. Erdemli and J. Volakis ........................................... 721

"A Hybrid Approach for Simulation of Log Periodic Antennas on an Aircraft"
B.E. Gray and J.J. Kim ........................................... 729

"Duct RCS Computation Using a Hybrid Finite Element Integral Equation Approach"
Y.C. Ma, R. McClary, M. Sancer and G. Antilla ........................................... 736

"Validation Studies of the GEMACS Computational Electromagnetics Code Using Measurement Data from the Transformable Scale Aircraft-Like Model (TSAM)"
D.R. Pflug and T.W. Blocher ........................................... 742

"A Combination of Current-and Ray-Based Techniques for the Efficient Analysis of Electrically Large Scattering Problems", U. Jakobus and F.M. Landstorfer ........................................... 748

"Field Computation for Large Dielectric Bodies by the PPP Method"
M.S. Abrishamian, N.J. McEwan and R.A. Sadeghzadeh ........................................... 756

AUTHOR INDEX ........................................... 763
